# ANNUAL DEPARTMENTAL REPORTS

## VOLUME I

**Auditor General**, for the fiscal year ended March 31, 1930.

## VOLUME II

**Public Accounts**, for the fiscal year ended March 31, 1930.

**National Revenue, Department of, (Customs and Excise)**, containing accounts of Revenue with statements relative to the Imports, Exports, Excise and Income of the Dominion of Canada, for the fiscal year ended March 31, 1930.

**National Revenue, Department of, (Shipping Report, Customs)**, containing the Statements of Navigation and Shipping for the fiscal year ended March 31, 1930.

**Trade and Commerce, Department of**, for the fiscal year ended March 31, 1930.

**Weights and Measures Inspection Service (Trade and Commerce)**, for the fiscal year ended March 31, 1930.

**Electricity and Gas Inspection Services (Trade and Commerce)**, for the fiscal year ended March 31, 1930.

**Board of Grain Commissioners for Canada (Trade and Commerce)**, for the crop year ended August 31, 1930.

**Interior, Department of the**, for the fiscal year ended March 31, 1930.

**Immigration and Colonization, Department of**, for the fiscal year ended March 31, 1930.

**Indian Affairs, Department of**, for the fiscal year ended March 31, 1930.

**Mines, Department of**, for the fiscal year ended March 31, 1930.

**Agriculture, Department of**, for the fiscal year ended March 31, 1930.

**National Defence, Department of, (Militia and Air Service)**, for the fiscal year ended March 31, 1930.

**National Defence, Department of, (Naval Service)**, for the fiscal year ended March 31, 1930.

**Pensions and National Health, Department of**, for the fiscal year ended March 31, 1930.

**Public Printing and Stationery, Department of**, for the fiscal year ended March 31, 1930.

### **VOLUME III**

**Superintendent of Penitentiaries**, for the fiscal year ended March 31, 1930.

**Royal Canadian Mounted Police**, for the year ended September 30, 1930.

**Secretary of State, Department of the**, for the fiscal year ended March 31, 1930.

**Commissioner of Patents**, for the fiscal year ended March 31, 1930.

**Archives**, for the year 1930.

**Civil Service Commission**, for the calendar year ended December 31, 1930.

**External Affairs, Department of the Secretary of State for**, for the fiscal year ended March 31, 1930.

**Labour, Department of**, for the fiscal year ended March 31, 1930.

### **VOLUME IV**

**Marine and Fisheries (Marine), Department of**, for the fiscal year ended March 31, 1930.

**Marine and Fisheries (Fisheries), Department of**, for the fiscal year ended March 31, 1930.

**Post Office Department**, for the fiscal year ended March 31, 1930.

**Public Works, Department of**, for the fiscal year ended March 31, 1930.

**Railways and Canals, Department of**, for the fiscal year ended March 31, 1930.

**Board of Railway Commissioners for Canada**, for the calendar year ended December 31, 1930.

**Chief Electoral Officer (By-elections)**, for the year 1930.

**Chief Electoral Officer (General Election)**, for the year 1930.

### **VOLUME V**

**Trade of Canada (Imports for Consumption and Exports)**, for the fiscal year ended March 31, 1930.

ANNUAL REPORT

OF THE

# MARINE BRANCH

Department of Marine and Fisheries

---

FISCAL YEAR

1929-30

OTTAWA

F. A. ACLAND

PRINTER TO THE KING'S MOST EXCELLENT MAJESTY

1931

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,  
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander-in-  
Chief of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to submit herewith for the information of Your Excellency and the Parliament of Canada, the Sixty-third Annual Report of the Marine Branch of the former Department of Marine and Fisheries.

I have the honour to be,

Your Excellency's most obedient servant,

ALFRED DURANLEAU,

*Minister of Marine.*

DEPARTMENT OF MARINE,

OTTAWA, December, 1930.

# REPORT OF THE DEPUTY MINISTER OF MARINE

To the Hon. ALFRED DURANLEAU,  
Minister of Marine.

SIR.—I have the honour to submit herewith my report for the fiscal year ended March 31, 1930.

The subjoined Lloyds tables show the tonnage in hand of the chief maritime countries at the beginning of 1929, and their 1928 outputs.

Country	Tonnage in hand at Jan. 1, 1929 (Lloyds statement)	Tonnage output 1928 (Lloyds statement)
	gross tons	gross tons
Great Britain and Ireland.....	1,242,794	1,445,920
Germany.....	382,422	376,416
Holland.....	182,229	166,754
France.....	161,566	81,416
Japan.....	118,580	103,663
Sweden.....	99,244	106,912
Russia.....	98,048	(not given for 1928) (43,917 in 1927)
Italy.....	93,316	58,640
Denmark.....	82,780	138,712
United States.....	47,949	91,357

A comparison between these two tables shows declines for Great Britain and Ireland, Sweden, Denmark, and the United States, of 203,126 tons; 7,668 tons; 55,932 tons; and 43,408 tons respectively. On the other hand Germany, Holland, France, and Japan show increases of 6,006 tons, 15,475 tons, 80,150 tons, and 14,917 tons respectively.

Lloyds March quarterly shipbuilding returns as compared with those of the previous quarter show a total increase of 219,811 tons in world production, but are 55,439 tons less than the total building a year ago.

The figures for the leading maritime countries are:—

	Gross tonnage in hand March 31, 1929
Great Britain and Ireland.....	1,357,375 tons
Germany.....	406,982 "
Holland.....	163,856 "
France.....	155,351 "
Japan.....	147,010 "
Russia.....	116,388 "
Sweden.....	98,344 "
United States.....	96,438 "
Italy.....	90,235 "
Denmark.....	81,588 "

Great Britain and Ireland, Germany, Japan, Russia, and the United States show gains of shipping in hand compared with their programs for the previous quarter of 114,581 tons, 24,560 tons, 28,430 tons, 18,340 tons, and 48,489 tons respectively.

World tonnage under way for the June quarter was almost identical with that in hand at the close of March, the figures being 2,838,225 tons and 2,837,812 tons (Lloyds statement).

The subjoined Lloyds table gives the figure for the chief maritime countries:—

	Gross tonnage in hand June 30, 1929
Great Britain and Ireland.....	1,453,906 tons
Germany.....	272,444 "
Japan.....	179,968 "
Holland.....	172,406 "
France.....	139,316 "
Russia.....	124,908 "
United States.....	119,098 "
Sweden.....	89,517 "
Italy.....	73,861 "
Denmark.....	68,009 "

As compared with the March returns, Great Britain and Ireland, Japan, Holland, Russia, and the United States show gains of 96,531 tons, 32,958 tons, 8,550 tons, 8,520 tons, and 22,660 tons respectively. Germany, France, Sweden, Italy and Denmark show losses of 134,538 tons, 16,035 tons 8,827 tons, 16,374 tons, and 13,579 tons respectively.

An interesting feature of these returns is the marked revival shown in Russian shipbuilding activity. Her tonnage output in 1927 amounted to 43,917 gross tons (Lloyds statement) and at the end of June, 1929, she had in hand 124,908 tons of merchant shipping. In the course of 18 months Russia had nearly trebled her rate of building.

#### COMPARISON OF BRITISH AND IRISH AND FOREIGN BUILDING AT JUNE 30, 1929

As the total of world shipbuilding at the close of June, 1929, amounted to 2,838,225 tons (Lloyds statement), of which Great Britain and Ireland had in hand 1,453,906 tons (Lloyds statement), it will be seen that Great Britain and Ireland were producing at that time a little more than fifty per cent of world merchant shipping.

Just prior to the war Great Britain and Ireland accounted for about 60 per cent of world output, but the increase in foreign competition since pre-war days is apparent.

#### MOTOR SHIPBUILDING AT JUNE 30, 1929

Of the total steam and motor tonnage building in the world at this time, steam tonnage comprised 1,394,168 tons and motor tonnage 1,432,220 tons (Lloyds statement); it will be noticed that the latter is slightly in excess of the former.

Of the 1,432,220 tons of motor tonnage, 590,429 tons were being built in Great Britain and Ireland, and 841,791 tons in the other countries. The percentage of motor tonnage being built was considerably higher in foreign countries than in Great Britain and Ireland.

One motor ship of over 25,000 tons was being built in Great Britain, while two of over 20,000 tons were being built in Great Britain, and two in France.

#### TANKERS UNDER CONSTRUCTION AT JUNE 30, 1929

The following table shows the number and gross tonnage of steamers and motorships, each of 1,000 tons and above, intended to carry oil in bulk, under construction in the world at the end of June, 1929.

Country of build	Steam		Motor		Total	
	No.	Tons	No.	Tons	No.	Tons
Danzig.....			1	5,500	1	5,500
France.....	2	15,360	2	16,306	4	31,666
Germany.....	1	8,200	1	8,000	2	16,200
Great Britain and Ireland.....	7	44,965	14	126,075	21	171,040
Holland.....			4	21,700	4	21,700
Italy.....	1	6,500			1	6,500
Japan.....	1	8,500	1	7,268	2	15,768
Russia.....			7	35,000	7	35,000
Sweden.....			3	24,400	3	24,400
United States of America.....			4	11,000	4	11,000
Total.....	12	83,525	37	255,249	49	338,774

It will be seen that the tanker tonnage under construction of Great Britain and Ireland was slightly greater than the rest of the maritime countries combined, 171,040 tons to 167,734 tons.

At the close of the September quarter there was a slight falling off in shipping under construction both in Great Britain and Ireland, and in the rest of the world, as compared with the June returns. The June figures being Great Britain and Ireland 1,453,906 tons; other countries 1,384,319 tons (Lloyds statement), the September ones Great Britain and Ireland, 1,448,355 tons, other countries 1,368,984 tons (Lloyds statement).

#### MERCANTILE SHIPBUILDING IN 1929

These returns are from Lloyds Register annual summary, are in gross tons and comprise only merchant ships of 100 gross tons or upwards.

TABLE showing the number and tonnage of merchant vessels launched in Great Britain and Ireland during the two years 1928 and 1929

District	1929						Total 1928

Portugal.....	4	1,592
Spain.....	7	9,305
Sweden.....	4	19,229
Turkey.....	1	412
Total.....	489	1,522,623

The above Lloyds table shows that out of a total output in 1929 of 1,522,623 tons for Great Britain and Ireland, 259,870 tons were on foreign account, or 17·1 per cent. In 1928 the building on foreign account amounted to 20·2 per cent of the total output.

In 1928 the British Dominions were Great Britain and Ireland's chief customers, accounting for 122,972 tons—the present table shows Norway in the first place with 90,749 tons built in British yards, France second with 33,037 tons, and the British Dominions third with 31,033 tons.

## SIZE AND TYPE OF VESSELS

The returns for 1929 show that 95 vessels of between 5,000 and 10,000 tons each and 18 vessels of 10,000 tons and upwards were launched. The largest are the motorship *Britannic* (26,840 tons) and the turbine steamer *Empress of Japan* (about 25,000 tons), which were the largest vessels launched in the world during 1929. Two other vessels of nearly 20,000 tons each were also launched, viz., the turbine steamer *Orontes*, of 19,970 tons, and the motorship *Winchester Castle*, of 19,950 tons.

Excluding vessels of less than 1,000 tons, 25 vessels of 175,009 tons (12 steamers of 68,092 tons, and 13 motorships of 106,917 tons) for the carriage of oil in bulk were launched during 1929. Of these, 18 vessels of about 145,000 tons were built on the Isherwood system of longitudinal framing. Two other vessels of 10,684 tons were also built on this system.

The total tanker tonnage, including 4 vessels of less than 1,000 tons each, represents 11.7 per cent, of the total tonnage of the steamers and motorships launched during 1929, as compared with 21 per cent in 1928.

The tonnage of steamers fitted for burning oil fuel, launched during the year, amounts to over 306,000 tons.

The returns include a number of vessels designed for channel, coasting, fishing (79 vessels) whaling (35 vessels), towing, harbour service, and other special purposes.

The average tonnage of steamers and motorships launched during the year is 3,167 tons. If the vessels of less than 500 tons are excluded, the average is increased to 4,443 tons, as compared with 4,656 in 1928, 4,193 in 1927, 4,486 in 1926, 4,439 in 1925, and 3,777 in 1924.

## VESSELS FITTED WITH TURBINES

Further progress was recorded in the use of steam turbines during 1929, when 15 vessels with a total tonnage of 107,477 tons were launched, which will be fitted with this method of propulsion. In addition, 10 vessels of 58,273 tons were launched which have a combination of reciprocating engines and low-pressure steam turbines.

## VESSELS FITTED WITH INTERNAL COMBUSTION ENGINES

The tonnage of vessels fitted with internal combustion engines is steadily increasing in comparison with the total output. The tonnage of such vessels launched during 1919 was 32,936 tons, while during 1926 it amounted to 201,913 tons, to 355,779 tons during 1927, and 427,916 tons during 1928. During the year 1929, 77 motor ships of 464,188 tons were launched, this tonnage representing 44 per cent of the steam tonnage launched.

The largest motorship launched during 1929 is the *Britannic*, of 26,840 tons—the largest vessel launched in the world during the year. It may be of interest to note that while the average gross tonnage of the steamers of 500 tons gross and upwards launched during 1929 is 3,838 tons, the similar average for motorships reaches 6,800 tons.

## OUTPUT OF LEADING PORTS

The Clyde district occupies first place amongst the shipbuilding centres, showing an output of 532,379 tons. Then follow the Tyne (271,601 tons), the Wear (245,511 tons), the Tees (162,209 tons), and Belfast (143,855 tons).

The largest increase, as compared with 1928, has taken place at Belfast, the figures for which are 68,117 tons higher than those for the previous year. The increase on the Wear amounts to 37,865 tons, and on the Tees to 29,243 tons; the figures for the Clyde show a decrease of 39,569 tons, and for the Tyne of 28,907 tons.

*Germany*

During the year under review, 85 vessels of 249,077 tons were launched. As compared with the output for 1928, the present figures show a decrease of 127,339 tons. The totals still represent 19.6 per cent of the total output abroad during 1929, compared with 30 per cent in 1928.

The figures include two vessels of 12,080 tons to be fitted with steam turbines, and 14 vessels of 65,186 tons which have a combination of reciprocating steam engines and low pressure turbines. The total figures comprise, also, 28 vessels of 93,089 tons to be fitted with oil engines, the largest being the motorship *Milwaukee* of 16,699 tons. Three tankers, of 26,217 tons—one a motorship of 8,000 tons—were launched.

The totals include 12 vessels of between 6,000 and 8,000 tons, five of between 8,000 and 10,000 tons, and two exceeding 10,000 tons each.

It may be of interest to state that of the total output in this country, no less than 34 vessels, of 111,576 tons, are intended for other countries, including 13 vessels of 49,086 tons for France.

*Holland*

The total tonnage launched during 1929—186,517 tons—is 19,763 tons higher than the 1928 figures and, apart from the record year of 1921, is the highest reached in this country. As usual, the figures do not include craft exclusively intended for river navigation, the total tonnage of which vessels reaches a high figure.

Eleven vessels of over 6,000 tons each were launched—all motorships—of which five exceed 10,000 tons each, including the *Johan Van Oldenbarnevelt* and the *Marnix Van St. Aldegonde* of about 18,000 tons each.

The totals for the year include 48 vessels of 131,097 tons to be fitted with internal combustion engines, which tonnage represents 70.3 per cent of the total output for this country.

Excluding ships of less than 1,000 tons, three motorships of 22,254 tons and one steamer of 2,300 tons are intended for the carriage of oil in bulk.

*Japan*

The output for this country—164,457 tons—shows an increase of 60,794 tons over the total for 1928, and is the largest total recorded for this country since 1921.

The 1929 figures comprise 30 motorships, of 134,673 tons, including the *Chichibu Maru*, of 16,920 tons, and the *Tatsuta Maru*, of 16,780 tons, and seven others exceeding 6,000 tons each. The motorship tonnage accounts for nearly 82 per cent of the total output for the year. Two vessels of 15,942 tons were launched for carrying oil in bulk.

*United States*

The output for the year 1929, namely, 126,063 tons, is 34,706 tons higher than that for 1928, but is still lower than the average recorded for some years prior to 1928.

Of the tonnage launched, 11 steamers of 44,192 tons, 25 motorships of 32,680 tons and 13 barges of 11,742 tons were built on the Atlantic coast; 3 steamers of 23,739 tons and 1 motorship of 1,692 tons on the Great Lakes, and 10 vessels of 12,018 tons on the Pacific coast.

The largest vessel launched during 1929 was the *Pennsylvania*, a turbo-electric vessel of 20,526 tons, built at Newport News. Six other vessels of between 7,500 and 9,000 tons were launched.

Six turbine steamers of 42,025 tons were launched in this country during 1929, including the above-mentioned *Pennsylvania* and two other vessels of 11,000 tons, in which electric drive is likewise employed. Internal combustion engine tonnage launched amounts to 36,452 tons. Of oil tankers of 1,000 tons and upwards, three of 12,303 tons were launched, all being motorships, one, of 1,815 tons, utilizing electric drive.

The totals include seven vessels of 14,986 tons built on the Isherwood system of longitudinal framing.

#### Denmark

The tonnage launched during 1929—111,496 tons—is 27,216 tons less than last year, but still largely exceeds the output recorded for this country in any earlier year. The total is again composed mainly of motorship tonnage (94,649 tons), which includes fourteen vessels ranging from 4,000 tons to 6,000 tons, one of 6,866 tons, and the *Amerika*, of 10,300 tons, the largest vessel launched during the year.

#### Sweden

The output for 1929—107,246 tons—slightly exceeds that for 1928, which was the highest previously recorded in this country.

Nearly 97·5 per cent of the total is composed of motorships (25 of 104,490 tons), of which seven are of between 6,000 and 9,000 tons each. The tankers launched—all motorships—amount to three, of 23,400 tons.

#### France

The output for the year—81,607 tons—compares with 81,416 tons for 1928.

The motorship tonnage launched, 62,928 tons, is nearly four times the steam tonnage, and includes the motorship *Lafayette*, of approximately 21,500 tons, and *Felix Roussel*, of about 17,000 tons, and three vessels of between 8,000 and 8,300 tons each. Only two steamers exceeding 4,000 tons were launched, viz: a turbine vessel of 4,840 tons, and a tanker of 7,455 tons. Three vessels, of 23,668 tons, are intended to carry oil in bulk, two of which, of 16,213 tons, are motorships.

#### Italy

The total figures for this country—71,497 tons—are 12,857 tons higher than those for 1928, but, with the exception of that year and of 1923, are much lower than those for any post-war year.

The totals for Italy comprise a steamer of 6,349 tons, and a motorship of 1,450 tons intended for carrying oil in bulk. The tonnage of the 20 motorships launched during the year amounts to 55,447 tons, equal to 77·5 per cent of the total output.

#### SUMMARY

Great Britain and Ireland.....	1,522,623
Germany.....	249,077
Holland.....	186,517

#### GENERAL STATISTICS

##### (Lloyds Statement)

Total world output in 1929 reached 2,793,210 tons; this is an increase of 93,971 tons over the 1928 output of 2,699,239 tons. In 1928 the British and Irish output was 53·6 per cent of world output; in 1929, 54·5 per cent. In

1927 British and Irish output was 53.6 per cent of world output. For three years in succession Britain and Ireland have accounted for more than 50 per cent of world shipbuilding.

During 1929 vessels totalling 1,270,000 tons have been launched in which internal combustion engines are being fitted; the 1928 figures were 1,183,229 tons. The tonnage of motorships building in the world at the close of 1929 was 387,451 tons more than the steam tonnage then under construction. There has been a falling off in the tanker tonnage launched in 1929 as compared with the 1928 output, the figures being 1929, 324,870 tons; 1928, 646,851 tons.

During the five years 1925-1929, the average world tonnage launched annually is about 160,000 tons less than the average of the five pre-war years 1909-1913.

Between June, 1914, and June, 1929, excluding wooden vessels and sailing vessels, there has been an increase in world tonnage of 20,382,000 tons of sea-going steel steamers and motor ships; this increase is largely due to increased building of tankers and motor ships.

During 1929, 63 whalers were launched, 35 in Great Britain and 28 in Norway.

COMPARISON (by countries) of tonnage in hand at close of 1929 with 1929 output

#### PRESENT STATE OF BRITISH SHIPPING

An article in the *London Times* of February 22, 1930, emphasizes the fact that while a year ago grain freights from Australia, the River Plate, and Vancouver were respectively about 37s. 6d., 25s., and 32s. 6d. a ton, to-day they had fallen to 22s. 6d., 11s. 6d., and 18s. a ton.

This serious decline in rates has extended to nearly all trades, resulting in much laid-up tonnage. Present high taxation seriously hampers home industry and commerce.

The article points out that if average freight rates in 1913, the first pre-war year, were represented by the basic figure of 100, the present figure would be 84, while working expenses were about 70 per cent higher. British shipping was also handicapped by the cost of handling bulk cargoes in United Kingdom ports, which was about 60 per cent higher than the cost at competing continental ports.

#### CANADIAN GOVERNMENT MERCHANT MARINE

##### COMPARISON OF OPERATIONS, 1928 AND 1929

	Year 1929	Year 1928
Total revenue.....	\$8,371,441	\$ 9,112,511
Total operating expenses.....	9,250,349	10,321,594
Operating loss for year.....	878,908	1,209,083

On account of the impossibility of operating the London-Antwerp and Cardiff-Swansea services with the obsolete tonnage at our disposal, in competition with the up-to-date tonnage of other lines, the above services had to be cancelled, with a resultant reduction in operating revenue. Such revenue was further reduced because in 1928 there were included the West Indies services which now form the subject of a separate report.

There were no major accidents in connection with the fleet during the year.

The fleet now consists of thirty-one vessels, the following steamers having been sold during the year:—

<i>Canadian Fisher</i>	<i>Canadian Rover</i>
<i>Canadian Forester</i>	<i>Canadian Observer</i>
<i>Canadian Trapper</i>	<i>Canadian Coaster</i>
<i>Canadian Rancher</i>

## REGULAR SAILINGS DURING THE YEAR

*From the Atlantic*

## United Kingdom—

Monthly service to Cardiff and Swansea—January to May.

Fortnightly service to London and Antwerp—January to April.

Ten-day service to London and Antwerp—May to September.

## West Indies—

Three-weekly passenger and freight service to Bermuda, Nassau, Kingston and Belize—January to April.

## Australia—

Three-weekly service to various Australian ports.

## New Zealand—

Monthly service to various New Zealand ports.

## Intercoastal—

Monthly service to Vancouver—January, February, March, April, August and September.

Fortnightly service to Vancouver—May, June, July, October, November.

## South America—

Monthly service to South American ports.

*From the Pacific*

Pacific Coast—

Weekly service to San Pedro and San Francisco—January to October.

Intercoastal—

Monthly service to St. Lawrence ports in summer; but to Halifax and Saint John in winter.

FIRST ANNUAL REPORT OF THE BOARD OF DIRECTORS OF CANADIAN NATIONAL  
(WEST INDIES) STEAMSHIPS, LIMITED, YEAR 1929

Operating revenue amounted to \$3,332,683.37 and operating expenses to \$3,780,524.65. The net operating loss was \$447,841.28.

On account of the unsettled condition of the sugar trade in the West Indies, less revenue resulted from that source than was expected. This condition together with the heavy expenses necessary in inaugurating a new service were mainly responsible for the deficit. Competition from services operated from United States ports has been somewhat heavier than was anticipated.

The revenue derived from the passenger trade has fully come up to our expectations, the vessels on the Eastern service carrying during this period 22,375 passengers; and those on the Western service, 2,682.

EASTERN SERVICE.—This service was taken care of by the *Lady Nelson*, *Lady Hawkins* and *Lady Drake*, each of which can accommodate 189 passengers, namely, 103 first class, 32 second class, and 50 third class. These ships made 26 sailings and the business done included a large volume of inter-island travel.

WESTERN SERVICE.—This service was taken care of by the *Lady Somers*, *Lady Rodney* and ss. *Connector*. The first two ships each have accommodation for 103 first-class passengers. The ss. *Connector* has accommodation for 18 passengers only.

The amount of bananas carried to Montreal during the summer months and to Halifax during the winter has come up to what was expected. It is anticipated that after the completion of one year's operations the banana-carrying steamers will have landed in Canada approximately two million bunches; this, notwithstanding strong competition by water and rail.

The only accidents to report are the grounding of the ss. *Chomedy* near Tobago on October 7, and a minor mishap to the ss. *Connector* when she touched Mauger Caye reef on November 24.

## REGULAR SAILINGS DURING THE YEAR

From Montreal (summer), Halifax (winter)—

Fortnightly passenger and freight service to Bermuda, Nassau and Kingston—April to December.

Fortnightly freight service to Kingston—April to December.

Fortnightly freight service to Porto Rico, St. Kitts, Antigua, Guadeloupe, Martinique, St. Lucia, Barbados, Grenada, Trinidad and Demerara.

From Halifax and Saint John—

Fortnightly passenger and freight service to Bermuda, St. Kitts, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad and Demerara.

From Kingston, Ja.

Fortnightly passenger and freight service to Belize, B.H.—May to December.

## OPERATIONS OF CHIEF CANADIAN SHIPBUILDING PLANTS

HALIFAX SHIPYARDS LIMITED, HALIFAX, N.S.

*New Construction*

One steel twin-screw ice-breaker, named *N. B. McLean*, for the Canadian Government—Department of Marine—Hudson Strait service, dimensions, as follows:—

Length between perpendiculars.....	260 feet
Breadth moulded.....	60 "
Depth moulded.....	31 "
I.H.P. on 12 hour trial.....	6,500
Revolutions per minute.....	105

The amount of \$922,303.52 has been expended on this ice-breaker, which has not yet been fully completed.

*Repair Work*

Ship repair work to the value of \$1,219,414.91 was carried out during the fiscal year 1929-30.

## MIDLAND SHIPBUILDING CO., LTD., MIDLAND, ONT.

*New Construction*

Steel upper lake bulk freighter *Stadacona* (Hull No. 24): 596' 0" (o.a.) x 60' 2" x 32' 0"; 12,200 d.w. tons on 19' 0" draft; gross tonnage 9,180.74; registered tonnage 6,711.13. Delivered to owners November 23, 1929.

*Repair Work*

Repair of shell damages, etc., of varying dimensions to the several steamers of the following fleets: Canada Steamship Lines, Limited, Great Lakes Transit Company, Mathews Steamship Co., Ltd., Paterson Steamships, Limited, and Sin-Mac Lines, Limited.

## PORT ARTHUR SHIPBUILDING CO., LTD., PORT ARTHUR, ONT.

The following vessels were commenced since April 1, 1929, and are now under construction:—

<i>Hopper barge No. 5</i> .....	Steam hopper barge.....about	800	750
<i>Hull 506</i> .....	SS. tug..... “	260	800
<i>Hull 507</i> .....	Triple screw car ferry... “	3,100	8,000

## PRINCE RUPERT DRY-DOCK AND SHIPYARD, PRINCE RUPERT, B.C.

*Ship Repairs*

One hundred and eighty-six vessels—docked, cleaned, painted and miscellaneous hull and engine repairs.

Four hundred and one—miscellaneous hull and engine repairs not requiring docking.

*Ship Construction*

One 67-foot packer for Can. Fish and Cold Storage Co.  
Two 75-foot packers for Island Packing Co., Ltd.  
Four 110-foot scows for Vancouver Tug Boat Co.  
One 41-foot troller for J. F. Eyolfson.

113	Barge.....	Sin-Mac Lines, Ltd.....	256' x 43' 6" x 15'....	Under construction for delivery at opening of navigation 1930.

*Ship Repair Work*

A total of 53 vessels were dry-docked during the season of 1929, including ocean liners, tankers, lake and canal vessels and miscellaneous smaller craft. Repairs covered from extensive bottom damage to minor jobs. In addition to vessels dry-docked, a number of vessels were repaired afloat.

BURRARD DRY-DOCK CO., LTD., NORTH VANCOUVER, B.C.

No new construction was carried on during the year. Engine, hull and deck repairs were made to 218 vessels. Sundry repairs were made to 27 tugs and 6 scows, and 28 vessels lined for grain.

STATEMENT showing the number of vessels removed from the Registry books of the Dominion of Canada during the year ended December 31, 1929

Sold to foreigners .....	18
Wrecked .....	16
Stranded .....	10
Lost .....	12
Broken up .....	114
Foundered .....	10
Burnt .....	33
Transferred to St. John's, Newfoundland .....	27
Transferred to Great Britain .....	1
Transferred to Barbados, B.W.I. ....	6
Transferred to Bermuda .....	1
Supposed to be out of existence .....	57
Registered in error .....	1
Collisions .....	2
Registry no longer required .....	7
Abandoned at sea .....	1
Missing .....	1
Seized and declared forfeited to United States .....	3
Sunk by gun fire United States coast guard .....	2
Total .....	<u>322</u>

It is estimated that 45,339 men and boys, etc., inclusive of masters, were employed on ships registered in Canada during the year 1929.

COMPARATIVE STATEMENT showing the number of vessels and number of net tons on the Registry books of the Dominion of Canada, on December 31, in each year from 1920 to 1929, both inclusive

## REPORT OF L. E. COTE, B.A.Sc., M.E.I.C., CHIEF ENGINEER

## WORK OF THE CHIEF ENGINEER'S BRANCH

This branch has charge of the construction of lighthouses, fog alarms and other aids to navigation; of the design and manufacture of lighthouse and fog signal apparatus, and research work in connection with the improvement of same; the administration of shops and Dominion Lighthouse Depot at Prescott, Ont.; of the construction and repairs of piers, wharves and buildings owned by the department. Examines and reports on all projects in connection with the development and improvement of harbours operated under Harbour Commissions. Has charge of all surveys and transfers of land owned by the department, and waterlots; of the publication of "Lists of Lights and Notices to Mariners"; of the removal of wrecks; ice breaking and other works in connection with aids to navigation, such as the river regulating dams now being established between Sorel and Montreal.

## NEW AIDS TO NAVIGATION

*Nova Scotia Agency*

Canso harbour, fog horn.

*New Brunswick Agency*

Carr's Brook, light on wharf.

Half Tide rock, unwatched light.

Little Wood island, light on pole.

Long point, fog alarm, boathouse and dwelling.

*Prince Edward Island Agency*

Entrance island, unwatched light.

Entry island, north side, unwatched light.

Naufrage pond, mast light.

Pinette river, range lights.

Tormentine cape, fog alarm.

*Quebec Agency*

Bois Brûlé, pole light.

Brûlé bank, back light pier.

Hope town, mast light.

Marsoui, pole light.

*Montreal Agency*

Dowker point, unwatched light.

Lachine-Caughnawaga, light.

Magog, pole lights.

*Ontario*

Bayfield, pole light.

Cobourg, light on "T" pier.

Fort Frances, two daymarks.

Graveyard point, unwatched light (electric).

Wades creek, unwatched light.

Walpole island (upper light), concrete beacon.

Berens river, two concrete daymarks.

Berens island, northeast end, unwatched light.

Gimlie, fog horn

*Ontario—Concluded*

Grindstone point, unwatched light.  
 Lake Winnipegosis, headlight.  
 Mossy river, range lights.  
 North Sandy island, unwatched light.  
 Poplar point reef, concrete day beacon.  
 Winnipeg river, six headlights.

*Northwest Territories*

Minor aids installed through the Interior Department.

*Victoria Agency, B.C.*

Indian Village deception channel, unwatched light.  
 Pill point, unwatched light.

*Prince Rupert Agency, B.C.*

Village island, unwatched light.

## CHANGES AND IMPROVEMENTS

*Nova Scotia Agency*

Dartmouth agency, dredging in front of the wharf.  
 Eddy point, new lantern and engine.  
 Eddy point, new combined lighthouse and dwelling.  
 Guion island, repairs to fog alarm building.  
 Iona, light improved.  
 Lockeport, new diaphone.  
 Mauger beach, crib protection.

*New Brunswick Agency*

Big Duck island, type B diaphone.  
 Brier island, type F diaphone.  
 Lepreau, duplication of engine and compressor.  
 Pea point, fog alarm.  
 Porter point, lighthouse moved to new site.  
 Prim point, type F diaphone.  
 Southwest Head, tower repaired.

*Prince Edward Island Agency*

Anguille cape, repairs to pipe line, shed, landing, road, and tower foundation.  
 Belle Isle southwest, repairs.  
 Bird Rocks, repairs to wharf.  
 Charlottetown, repairs to Marine wharf.  
 Eastern harbour, back light moved to new site.  
 Ferolle point, repairs to buildings and road.  
 Grant beach, back light moved.  
 Hay island (front light), new light.  
 Hay island (back light), moved to new location.  
 Neguac (lower), tower moved; new unwatched light.  
 North point, repairs to tower and dwelling.  
 Oak point, protection work.  
 Port Hood island, lantern.  
 Roseway cape, type F diaphone.  
 Sheldrake island, repairs.  
 Trenton, pole light (electric).

*Quebec Agency*

Bathurst, lantern.  
Cap au Corbeau, repairs to dwelling.  
Fame point, repairs.  
Iles de Mai, aga accumulator.  
Little Belledune, new apparatus.  
Maisonnnette, chanteloup clock.  
Miscou island, type F diaphone.  
Quebec agency, repairs to Allan wharf.  
Quebec agency, shed No. 8 converted into an oil shed.  
Cap des Rosiers, repairs to tower and dwelling.  
Rimouski, re-establishment of lights.  
St. Jean, Orleans island, electrification of light.  
St. Laurent, set of reflectors.  
Trinity bay, new headlight.  
West point, Anticosti, repairs to dwelling, etc.

*Montreal Agency*

Chenal Dupas, experimental dam.  
Champlain, reconstruction of back light.  
Contrecoeur-Verchères, alterations to front light.  
Caron point, apparatus.  
Ile Ronde, new apparatus.  
Lake St. Peter curve No. 2, Pointe du Lac, emergency lights.  
Lake St. Peter curve No. 2, lower back, protection work.  
Lake St. Peter curve No. 2, upper back, protection work.  
Lake St. Peter curve No. 2, lower, protection work.  
Oka, new apparatus.  
Pointe aux Anglais, unwatched light.  
Pointe du Lac, modification of present structure.  
Ste. Anne de Bellevue, reconstruction of lighthouse.  
Ste. Anne de Bellevue, new apparatus.  
St. Placide, new apparatus.  
Verchères village, reconstruction of lights.

*Ontario*

Amherstburg, new approach to Depot wharf.  
Bar Point lightship, repairs.  
Burlington, extension of electric line.  
Bay point, repairs.  
Bishops bay, repairs to dwelling.  
Brighton range light No. 2, pier rebuilt.  
Cobourg, electric lights.  
Cabot Head, new apparatus.  
Goderich, installation of cable.  
Kincardine, repairs to tower.  
Kingsville, reflector.  
Mohawk island, unwatched light.  
Mississagi strait, repairs to wharf.  
Ninemile point, installation of oil engines and new apparatus.  
Owen Sound, repairs to foundation of front range tower.  
Pelee passage, repairs to tower.  
Peninsula harbour, combined light and dwelling.  
Port Arthur, new apparatus.  
Port Colborne, reinforced concrete tower and light.  
Providence bay, stronger light installed.

*Ontario—Concluded*

Parry Sound agency, extension to yard railway.  
 Southeast shoal, electrical standby.  
 Sault Ste. Marie upper entrance back light, installation of electric cable.  
 Spider island, repairs to tower.  
 Stag island shoal, unwatched light.  
 Squaw island, unwatched light.  
 South river, unwatched light.  
 Toronto West gap, flashing light.  
 Tobermory, new apparatus.  
 Black Bear, dwelling for lightkeeper.  
 Cox reef, lighting apparatus.  
 George island, lighting apparatus improved.  
 Gull harbour, new tower and new dwelling.  
 Selkirk wharf, concrete protection for pole lights.  
 Victoria beach, new lantern.  
 Warren landing, construction of concrete piers.

*Victoria Agency, B.C.*

Active Pass, duplication of generating unit.  
 Ballenas islands, repairs to dwelling.  
 Burnaby shoal, beacon.  
 Discovery island, repairs to buildings.  
 Dias channel, new beacon.  
 Fraser river, new unwatched beacon.  
 First Narrows, light moved to new location.  
 Harbour entrance beacon, Nanaimo, aga installation.  
 Porlier Pass, general repairs.  
 Pulteney point, new apparatus.  
 Salmon Arm, aga light.  
 The Needles, new apparatus.  
 Victoria agency, overhead travelling crane.

*Prince Rupert Agency, B.C.*

Prince Rupert agency, power cable for lighting depot.

## PUBLICATIONS

*Publications Office, Chief Engineer's Branch*

One hundred notices to mariners, comprising 271 subjects, were published during the past year.

The following ones may be specially noted:—

Weather and ice reports and forecasts.

Gulf of St. Lawrence ice patrol.

Hydrographic information regarding west coast of Hudson bay, from Port Churchill to cape Churchill.

Notice regarding reciprocal quarantine inspection between Canada and United States.

Tables for time for the turn of the tidal streams, 1930, in entrance to Great Bras d'Or, N.S.

The annual edition of the "List of Lights and Fog Signals," with which all radio aids to navigation are now included, in three sections, was issued.

## ICE BREAKING

The Sin-Mac Lines Limited contracted for a period of four years to keep the harbours at the head of lake Superior open for navigation until December 17, and open them in the spring as soon as the canal at Sault Ste. Marie is open for navigation.

## REMOVAL OF OBSTRUCTIONS TO NAVIGATION

During the last season this branch attended as usual to the removal of obstructions to navigation. Two of these, however, were removed by the owners upon notification.

## MAINTENANCE AND REPAIRS TO WHARVES

Wharves were repaired, etc., at the following places:—

<i>Nova Scotia</i> —	<i>Quebec</i> —
Diligent river,	Anse St. Jean,
Hampton,	Grindstone,
Harbourville,	Ile aux Coudres,
Margaretsville.	Lamek,
<i>New Brunswick</i> —	Les Eboulements,
Lorneville,	Magog,
Miscou.	Montmagny,
<i>Prince Edward Island</i> —	Pointe Basse,
Hickeys wharf,	St. Irénée,
McPhersons cove,	St. Laurent,
Summerside,	Sandy beach.
Victoria,	<i>British Columbia</i> —
Vernon river.	Hope bay,
<i>Ontario</i> —	Half Moon bay,
Cockburn,	Ladysmith,
Hilton,	Naramato,
Little Current,	North Gabriola island,
Parry Sound.	Royston wharf.

## DOMINION LIGHTHOUSE DEPOT, PRESCOTT, ONT.

Lighthouse apparatus, fog alarm accessories and other material required for the various agencies of the department and for the Dominion light stations have been manufactured. Necessary repairs have been made to the hulls, engines, etc., of Prescott division steamers and to the depot plant.

The work of the manufacturing department, which included repairs to Dominion steamers, represents this year an amount of \$73,139.18, divided as follows:—

Material .....	\$29,452 31
Labour .....	31,044 45
Overhead .....	12,642 42

The latter item included expenses in connection with the engineering staff, a proper portion of the cost of general administration and other incidentals to manufacturing.

The principal works of the manufacturing departments have been as follows: The making of buoy superstructures, buoy lanterns, buoy whistles, large and small headlights, complete with hoisting gears, reflectors, mercury floats, revolving apparatus. A new type of fog bell mechanism, vapour burners and accessories, diaphones, pistons and other fog alarm parts, also repair and spare parts for the different agencies. Lighting apparatus and other material were prepared for the St. Lawrence ship channel and the Canadian division of the International Boundary Commission to the amount of \$1,046.03.

*Stores.*—The cost of administration of stores has been \$6,633.55, and new stock to the amount of \$106,126.88 has been added. The total amount of stores distributed to the maintenance and construction branches as well as the various agencies has been \$82,127.33.

*Experimental Work.*—During the year the regular testing of oil samples received from various firms and from our own agencies has been carried out. Tests have been made of mantle burners. In connection with reflector and lens apparatus a new weight-driven fog bell mechanism operating with a 300-pound bell was designed and satisfactory results obtained with this form of apparatus.

#### DOMINION STEAMERS AT PRESCOTT, ONT.

*C.G.S. "Concretia."*—The C.G.S. *Concretia* after being fitted out at Prescott went into commission on April 16. Her work consisted in charging and placing buoys between Prescott and the head of lake Ontario, inspecting buoys and beacons at regular intervals and delivering supplies to various light stations. The *Concretia* assisted at various repair works at light stations in the division west of Prescott. At the close of navigation the *Concretia* after lifting some of the buoys was forced, due to ice and weather conditions, to lay up at the foot of the Murray canal, Bay of Quinte.

*C.G.S. "Scout."*—The C.G.S. *Scout* after being fitted out at Prescott went into commission on April 8 and maintained the lights in this division east of Prescott. Her work was of the same nature as that of the *Concretia*. The *Scout* also lifted all gas buoys from Kingston to the head of the Cornwall canal. She was laid up at Prescott on December 21, 1929.

#### COMMISSIONER OF LIGHTS' BRANCH

##### REPORT OF J. G. MACPHAIL, B.A., B.Sc., M.E.I.C., COMMISSIONER OF LIGHTS

The principal work performed during the fiscal year ending March 31, 1930, has been an extension of the buoy and beacon services, together with the maintenance of lights and other aids to navigation throughout the Dominion, and the maintenance and inspection of some 752 public wharves. These operations are set forth in tabular form in statement attached.

STATEMENT, by districts, showing the number of lights of the several orders, lightships, lightkeepers, fog signals, buoys, submarine bells, etc.

	1st order lights	2nd order lights	3rd order lights	4th order lights	5th order lights	6th order lights	7th order lights	Gas beacons	Pressed lens lights and other minor types	Catoptric lights	Electric lights	Total lights	Lightships	Lightkeepers	Diatphones	Fog-guns and bombs	Fog whistles

## RIVER ST. LAWRENCE SHIP CHANNEL

REPORT OF N. B. McLEAN, M.E.I.C., ACTING CHIEF ENGINEER

## DREDGING OPERATIONS, SEASON OF 1929

During the season of 1929 the dredging work in the river St. Lawrence ship channel was pushed to the utmost, the dredging fleet again being operated day and night.

The plant consisted of nine dredges and attending plant, one rock breaker, one stone lifter, one sweeping steamer and one tug with sweeping scow. It is to be noted that the season of 1929 opened with the handicap of one less dredge than in 1928, as dredge *No. 1*, the oldest vessel in the fleet, sank alongside the wharf at Sorel late in 1928. This dredge was too far gone to be worth reconditioning after being refloated.

There were delays for one reason or another throughout the season. The first dredge was commissioned on May 8, the ninth on June 13, and the average date for the commissioning of the whole fleet was May 27. Other delays were caused by breakages and repairs, occasioned by the harder material encountered. However, in spite of the fact that there was one less dredge in commission than in 1928, that the dredges started late and that there were many breakages, excellent progress was made and the total quantities dredged exceeded the previous year's work by about 200,000 cubic yards.

The following is a detailed statement of the work performed:—

## THIRTY-FOOT PROJECT—MONTREAL TO QUEBEC

*Cap à la Roche Curve*.—One elevator dredge worked at this point for over three months, widening the curve on the south side and removing 96,890 cubic yards of shale rock. The rock breaker also worked all season here, day and night, while the stone lifter was used as required.

## THIRTY-FIVE-FOOT PROJECT BETWEEN MONTREAL AND QUEBEC

*Longueuil Shoal*.—One large dredge was operated here all season and a second dredge for 15 days, removing 125,550 cubic yards. The material encountered was hardpan, extremely hard to handle and causing great wear and tear on plant.

*Forsyth Shoal*.—One dredge worked here for a little over a month removing 22,400 cubic yards of hardpan and stones.

*Longue Pointe Curve*.—One dredge was employed here eleven days, completing the 35-foot dredging at this point and removing 16,500 cubic yards of stones and gravel.

*Cap. St. Michel and Varennes Curve*.—The work of widening the channel at this point was pushed forward vigorously, one dredge working for 39 days and one for two months excavating 204,300 cubic yards of clay. This improvement will be of great value when completed.

*Yamachiche Bend, Lake St. Peter*.—One dredge worked here about two months on the south side, removing 127,680 cubic yards of clay.

*Port St. Francis*.—One dredge was operated for 97 days and completed this section, removing 133,625 cubic yards of clay, sand and stones. A considerable number of boulders were also removed by the stone lifter.

*Bécancour Lower Traverse*.—Three dredges worked here for 15, 46 and 97 days, removing 159,220 cubic yards of hardpan, shale, sand, clay and stones.

*Champlain Upper Course and Champlain Curve.*—One dredge worked 10 days and one 119 days at this point excavating 216,550 cubic yards of hardpan, shale, clay, stones and sand.

*Champlain Lower Course.*—One dredge worked 95 days removing 255,200 cubic yards of clay, stones, hardpan and boulders.

*Cap Charles Channel.*—One dredge was employed in this section for about a month removing 7,040 cubic yards of unbroken shale and hardpan.

*Ste. Croix Traverse.*—One dredge worked 38 days, removing 182,400 cubic yards of sand, with a few stones.

#### THIRTY-FIVE-FOOT PROJECT BELOW QUEBEC

*North Channel, Madame Reef Shoal and West Sand.*—The powerful sea-going elevator dredge *No. 16*, with her two hopper barges, worked all season in this channel, day and night. In addition the old suction dredge *Beaujeu*, now converted into the elevator type, worked by day only, with one hopper barge. A second hopper barge, for use with this latter dredge, is now under construction, and next season the dredge will work day and night, with a consequent increase in output.

Following out the department's policy, every effort has been made to dredge the central five hundred feet of this channel, which eventually will be widened to 1,000 feet.

The two dredges together removed 781,800 cubic yards at West Sand and 485,500 cubic yards at Madame Reef shoal, a total of 1,267,300 cubic yards; the material being clay, sand and stones. This is an increase over last season of 235,000 cubic yards, while the mileage of 500-foot channel dredged this year is 1.46 as compared with 0.92 mile last season. With dredge *No. 8* working day and night next year and a second hopper barge in commission to serve her, a further increase in the output may reasonably be expected.

#### CLEANING UP

*Curve No. 3, Lake St. Peter.*—One dredge, working eight days, cleaning up the north bank of the curve to 35 feet depth, removed 12,750 cubic yards of clay where the high bank had apparently slid into the channel.

*Batiscan Traverse.*—Some sand lumps were located in this section by the sweeping scow and were removed, to a depth of 30 feet, by a dredge working for eight days, the quantity excavated being 9,250 cubic yards.

#### TOTAL YARDAGE DREDGED

The fleet removed, in all, 2,836,655 cubic yards, an increase of 208,670 yards over last season.

It is interesting to note that a barge of broken stone, which sank practically on the centre line near Ile Ste. Thérèse, was at once located by the sweeping scow and removed by one of the powerful elevator dredges.

The deepening of the ship channel to 35 feet is now practically completed between Three Rivers and the upper end of Longue Pointe curve and considerable progress has been made this year in deepening the channel to 35 feet above Longue Pointe curve in the harbour of Montreal. Below Three Rivers, despite the harder material encountered, satisfactory progress has been made. The increased progress in the new North Channel below Quebec has already been dealt with above.

## PROGRESS OF DREDGING OPERATIONS AT CLOSE OF SEASON 1929

## THIRTY-FOOT PROJECT

Total length of dredging done .....	(miles) 66.95
Total length of dredging yet to be done .....	" 1.10
Total number of cubic yards dredged .....	54,042,532
Total number of cubic yards yet to be dredged .....	1,258,800

## THIRTY-FIVE-FOOT PROJECT

Total length of dredging done .....	(miles) 63.86
Total length of dredging yet to be done .....	" 28.03
Total number of cubic yards dredged .....	55,357,596
Total number of cubic yards yet to be dredged .....	18,578,099

The total cost, from 1851 to the end of the fiscal year March 31, 1930, of the St. Lawrence ship channel from Montreal to Father Point, including plant, shops, surveys, etc., is as follows:—

Dredging .....	\$23,868,126 02
Plant, shops, surveys, etc. ....	13,010,179 08
Grand total .....	<u>\$36,878,305 10</u>

The total number of cubic yards dredged in the river St. Lawrence ship channel from 1851 to the end of the season of 1929 amounted to 137,440,808, the material varying from very hard shale rock to soft blue clay.

## TIDAL SEMAPHORES

The tidal semaphores were put into operation on the following dates:—

Pointe Citrouille .....	April 26, 1929
Cap à la Roche .....	April 26, 1929
St. Nicholas .....	April 25, 1929
Crane island .....	April 22, 1929

## HEIGHT OF WATER

The height of water in the ship channel remained satisfactory throughout the season, the lowest reading at Sorel being 30 feet 10 inches on November 30, 1929.

## SWEEPING

The usual sweeping of the ship channel has been carried out by the C.G.S. *Detector* and, in addition, some close sweeping of areas to be dredged in the near future.

A second sweeping outfit, consisting of a tug and scow, was also used and has proved practically all the 35-foot dredging between Sorel and Cap St. Michel, as well as carrying on sweeping operations elsewhere as required.

In addition, during part of May and June, the channel for a distance of about eight miles below Chicoutimi—in the Saguenay river—was closely swept at the request of the Chicoutimi Harbour Commission.

## MARINE SIGNAL SERVICE, MARCH 31, 1930

Signal stations have been established for the purpose of maintaining communications between ship and shore by means of flag signals.

This system of stations extends from Cape Race, Nfld., and Belle Isle up the gulf and river St. Lawrence and through the Great Lakes to Port Arthur and Fort Wiliam, Ont. Following is a complete list of stations:—

## EAST OF QUEBEC

Name of station	Location	Nautical miles from Quebec	Means of communication
(R) Quebec.....	Custom house.....	0	Telephone
St. Jear d'Orléans.....	Shore end of wharf.....	14	"
Crane island.....	Lighthouse.....	32	"
L'Islet.....	100 yards east of church.....	40	Telegraph

(Stations marked (R) are reporting stations only and are not equipped for signalling purposes.)

## EAST COAST VISUAL SIGNAL SERVICE, FISCAL YEAR 1929-30

Signal stations on the East Coast are under the administration of the Radio Branch and under the direct jurisdiction of the Division Superintendent of Radio at Halifax. All radio stations report ships communicated with and this is supplemented by reports of ships sighted by the following visual signal stations which are organized to tie in with the East Coast radio service:—

*Magdalen Island.*—Including Grindstone, Amherst island, Pleasant bay, Grosse Isle and Etang-du-Nord. Wireless to Sydney.

*St. Paul Island.*—Signal agent part-time. Wireless to Sydney.

*Aspy Bay.*—Signal agent part-time. Landline to Sydney.

*Scatari Island.*—Signal agent part-time. Landline and telephone to Sydney.

*Flat Point.*—Signal agent part-time. Private telephone to Sydney.

*Point Tupper.*—Signal agent part-time. Landline to Sydney; ice reports to Canso.

*Sydney, C.B.*—The duties of signal agent are undertaken by Captain MacKenzie, Superintendent of Pilots, who, upon receipt of reports, analyses same and forwards to central offices at Halifax and Quebec as requisite.

*Halifax, N.S.*—This station is located at the Citadel and maintains a continuous watch day and night and is in direct communication with Chebucto Head radio and signal station by a private telephone. A summary of ships reported by the Citadel station appears in the department's annual report.

*Chebucto Head.*—This station is situated at the entrance to Halifax harbour and reports the passing of all vessels to the signal station at the Citadel. Two full-time signal agents are maintained for visual signalling. The D/F station, situated at the same point, reports all vessels communicated with by wireless, giving position and probable time of arrival. The station is organized for lamp signalling at night to vessels not fitted with wireless.

*Sambro Head Light Vessel.*—This lightship keeps a lookout and reports all passing vessels not fitted with wireless to Chebucto Head.

*St. John, N.B.*—The signal station at St. John is situated in the Customs building and is connected by telephone to the Red Head D/F station. Two full-time signal clerks are employed.

*Lurcher Lightship.*—Reports all ships spoken or sighted by wireless to Red Head, St. John.

*Seal Island.*—A signal clerk part-time reports by wireless to Red Head, St. John, all ships spoken or sighted.

*Partridge Island.*—Signal agent part-time. Telephone to St. John, N.B.

## BRIEF SUMMARY OF WORK PERFORMED

1. Stations report movements of vessels to Montreal and Quebec.
2. Stations report weather conditions daily to Montreal and Quebec.
3. Montreal and Quebec publish daily bulletins, giving weather and ice conditions and movements of vessels.
4. Montreal and Quebec publish daily bulletins showing depths of water at various points in the river St. Lawrence ship channel.
5. The signal service offices at Montreal and Quebec are open day and night for the purpose of furnishing the public with information of shipping matters.

6. The telegraph system of the department of Public Works on the north shore of the gulf of St. Lawrence report the movements of vessels engaged in the coasting trade to the signal service at Quebec.

7. The Government grain elevator at Port Colborne reports to Montreal the arrival and departure of vessels engaged in the Upper Lakes grain trade.

8. The collectors of customs at Fort William and Port Arthur report to Montreal the arrival and departure of vessels engaged in the Canadian grain trade.

9. The collectors of customs at all the seaports in the river and gulf of St. Lawrence on the Atlantic coast, report the arrival and departure of vessels engaged in the overseas trade.

10. Lloyd's agent at Quebec is furnished daily with full information of the movements of vessels engaged in the overseas trade to and from ports in the province of Quebec.

#### ICEBREAKING, 1929-30

##### REPORT ON THE WORK OF THE ICEBREAKERS "MIKULA", "SAUREL" AND "LADY GREY" DURING THE WINTER OF 1929-30

At the close of the season of navigation of 1929 the *Lady Grey* and the *Bellechasse* took station at Three Rivers to look after the traffic in that vicinity and the *Mikula* and *Montcalm* performed the same duty at Quebec.

On December 6 there was considerable heavy ice in the river from about thirty miles above Quebec outwards. On this date the ss. *Glenaster*, ss. *North Voyageur* and ss. *Gaspesia* were below Quebec, the ss. *Kamir* at Quebec, the ss. *Charterhulme* abreast St. Antoine, the ss. *Odile* and ss. *Boreas* at Three Rivers and the ss. *Lord Downshire* at Montreal. The *North Voyageur* and the *Gaspesia* were escorted to Quebec on December 6 and the next day the *Charterhulme*. *Odile* and *Boreas* were helped to the same port after a hard night in the ice near St. Antoine. The *Lord Downshire* left Montreal on December 7 and proceeded to Sorel where she anchored, as it was too late to proceed further.

During the night of December 7-8 the weather came down bad with heavy N.E. wind and thick snow. In the morning the river was blocked from Three Rivers upwards, with the *Lord Downshire* cut off at Sorel.

Efforts were immediately made to cut out the *Downshire*, but it was found, after two days, that the task was too much for the *Lady Grey* and *Bellechasse*. The *Mikula* was therefore brought up and began work on the afternoon of December 10. Owing to the great difficulty in opening and keeping the channel clear and to bad weather conditions, it was December 18 before the *Lord Downshire* was released and brought safely to Three Rivers. Further delay followed, due to adverse weather, and it was not until December 22 that this vessel finally reached Quebec.

In the meantime, on December 12, the *Kamir* left Quebec and was escorted through the ice to clear water by the *Montcalm*.

When the *Lord Downshire* arrived at Quebec on December 22, there were three other vessels waiting to go to sea: the *Charterhulme*, *Odile* and *Boreas*.

On December 22 there were five vessels at Quebec ready to proceed to sea. It was decided, however, that the *Glenaster* should remain there for the winter, as she had lost her anchors and for other reasons.

On the morning of December 23, the *Lord Downshire*, *Charterhulme*, *Odile* and *Boreas* left Quebec escorted by the icebreakers *Mikula*, *Montcalm* and *Lady Grey*. Very heavy ice conditions were encountered all the way until the ships finally got into clear water well to the southeast of Heath Point, Anticosti. The *Lady Grey* went only as far as Red island, where she turned back and assisted the lightships to Quebec.

The whole of the convoy was at Seven Islands by January 3. Here several of the vessels replenished their bunkers from the cargo of coal carried by the *Boreas*. After coaling, the convoy proceeded and on January 9 the *Mikula* arrived at North Sydney, with the *Lord Downshire* and *Charterhulme*. After taking coal and supplies, the *Mikula* left North Sydney on January 13, proceeding back to assist the *Montcalm*, *Odile* and *Boreas* and finally returned to North Sydney with these vessels on January 20. After the convoy had arrived safely at North Sydney, the *Montcalm* took up her station there for the winter and the *Mikula* returned to Quebec, arriving on January 29.

During the winter the usual patrols were carried out by the *Mikula*, *Saurel*, and *Lady Grey* to keep the river open as far up as possible, and as a result of this work the channel remained clear to a point about two miles above Three Rivers. Several jams were broken up at Quebec bridge and others prevented forming by breaking up the large fields of batture ice before it had arrived at the narrows at Cap Rouge. The *Saurel* made a trip to Bicquette island, leaving January 14 and returning January 16, took off the lightkeepers and brought them back to Quebec. On March 9 the *Mikula* left Quebec, proceeding to Ellis Bay, Anticosti, where assistance was given to the *Gaspesia* to get clear of the ice. She arrived back at Quebec March 14.

On February 3 the *Saurel* was sent up to Three Rivers to open lake St. Peter. This was in the nature of experimental work with a view to opening the river to Montreal at an earlier date and preventing floods. By February 13 the channel was clear to Gallia bay in the Sorel islands and by February 18 large areas in the lake were also free of ice. On the latter date the *Saurel* was withdrawn to Quebec to replace a broken blade.

On March 10 the *Saurel* began work again in lake St. Peter. Here there was some delay as the ice on each side of the channel had moved out and had to be broken up to allow it to pass the Narrows at the foot of the lake. The *Mikula* joined in the work of pushing the cut upstream on March 15 and the *Lady Grey* on March 20. The *Saurel* was withdrawn to Quebec March 19 to replace a broken blade, rejoined above again March 28. By March 31 the head of the cut was at a point about twelve miles above Sorel. On April 1 the *Mikula* left for Quebec, as she had carried away a blade. The work was pushed to the utmost and by April 3 the *Saurel* had opened a narrow channel to the Imperial Oil wharf at Montreal and by April 12 the channel was clear, and the *Saurel* reached Victoria pier, Montreal. The Grand Chenal in the Sorel islands had also been opened as well as the north channel from Lanoraie to Lavaltrie.

As a result of the ice-breaking operations there were no floods between Quebec and Montreal.

After the work of opening the river to Montreal was completed the *Lady Grey* broke up the heavy bank of frazil ice that accumulates at the foot of the Soulanges canal. This work was carried out between April 23 and April 28.

The *Saurel* opened the Saguenay river from about Ile St. Louis to Ha Ha Bay and was employed on this duty from April 24 to May 4.

The *Mikula* left Quebec April 10 and proceeded to Cabot strait to go on ice patrol, the *Montcalm* being sent from Sydney for the same duty at about the same time. At the date of writing, May 8, this patrol work is still being carried on.

The new icebreaker *Saurel* was built at Canadian Vickers, Montreal, in 1929, launched October 30, and delivered to the department at Quebec on December 13. The main dimensions of this vessel are as follows: Length B.P., 200 feet; beam, 42 feet; depth, 21 feet; draft, trimmed for ice-breaking, 16 feet. She is a twin-screw oil-burning vessel with 3,000 indicated horsepower, which gave a maximum speed on trials of 14 knots.

The results obtained from this vessel have been extremely satisfactory. The penetrating into ordinary field ice is exceptionally good, while her work

in heavy frazil ice is very satisfactory. On April 3 this vessel forced her way through the ice between the hours of 5 a.m. and 6 p.m. from Vercheres wharf to the Imperial Oil wharf at Montreal, a distance of 13 miles. For about 11 miles of this distance the ice was about 20 inches thick, 15 inches of blue and 5 inches of snow ice, with occasional ridges. Progress was made through this ice at three miles an hour. Two miles of the channel opened on April 3 was in heavy frazil ice, in places solid to the bottom. From this it can be seen that the vessel is exceptionally efficient. The exceptionally heavy wave action developed by the *Saurel* when running through the water at full speed is a factor of considerable importance as it breaks the ice for some little distance on each side of the cut. This wave action is also used to a large extent in widening, the ship being run at full speed along the side of the cut, the waves ripping the ice out sometimes to a distance of 100 feet.

When the *Saurel* was delivered on December 13 she was detailed for the duty of keeping the river open at the most dangerous point, namely, Quebec bridge. Two heavy jams were successfully broken up by this vessel at this point during the time that the *Mikula* and *Lady Grey* were engaged above cutting out the *Lord Downshire*. Had the *Saurel* not been available for this duty the situation might have been very much worse with the possibility of the *Lord Downshire* and the two icebreakers being cut off from Quebec and the whole ice-breaking program disarranged for the winter and as a result heavy floods from Grondines upwards in the month of April.

From the foregoing it will be seen that the *Saurel* demonstrated her efficiency and usefulness during her first season in the early winter and in the spring, and that it was possible to carry out work that had never before been attempted; the results obtained were distinctly satisfactory.

When the new icebreaker, the *N. B. McLean*, now nearing completion at Halifax, is put into commission, the department will have four powerful vessels for ice-breaking service: the *Mikula*, the *N. B. McLean*, the *Saurel*, and the *Lady Grey*. With this fleet it will be possible to control the whole ice situation in the St. Lawrence, to prevent floods anywhere between Montreal and Quebec and to insure an earlier opening of the river to Montreal.

#### CONTRACT WORK TO COMPLETE THE THIRTY-FIVE-FOOT PROJECT

For several years previous to the war and for two years after hostilities were declared a fleet of 15 dredges was operating in the river St. Lawrence ship channel. As the necessity for economy increased, the fleet was gradually reduced in numbers until in 1919 and 1920 only 4 dredges were in commission. From 1921 to 1924, inclusive, 5 dredges were operated. Between 1925 and 1928, the number of dredges was gradually increased, and, during the latter year and in 1929, 10 were again at work. From 1917 until 1924, inclusive, not only was the number of dredges cut down, but the hours of work were reduced to 10 hours per day.

From the foregoing it will be seen that dredging operations on the ship channel have been very considerably retarded, and the Chief Engineer of the river St. Lawrence Ship Channel estimates that the work is now approximately 8 years behind schedule.

There is no question of the pressing necessity for completing the 35-foot channel in the shortest possible time. The traffic on the river is steadily increasing and every year larger vessels are making use of the St. Lawrence route, and the shipping interests are demanding early completion of the work.

The problem confronting the minister and the officers of his department was whether to embark on an extensive program of construction of dredging equipment in an endeavour to speed up the work, or to invite tenders with a view to having some part of the work completed by a competent Canadian

dredging contractor. The weight of argument appears to be greatly against the former proposition, chiefly on two points, the length of time it would take to get the additional equipment built and the expense involved therein, and, secondly, the great loss that would be sustained in having this equipment left on the Government's hand when the work would be finished.

The minister, therefore, caused a survey to be made of the situation with a view to having part of the work done by contract. This survey revealed that there is roughly 8,000,000 cubic yards of dredging to be done between Montreal and Quebec in order to complete the 35-foot project, and that at the rate of progress being made by the department it would take, approximately, ten years to do the work.

The work remaining to be done was divided in two. Approximately 4,000,000 cubic yards were to be retained for completion by the department's dredging plant, and approximately 4,000,000 cubic yards were to be marked for contract work. By this means it was anticipated that the whole work could be completed in four years.

By the end of the fiscal year plans and specifications had been prepared for the sections proposed to be completed by contract, and it was the intention to immediately call for public tenders.

In regard to the 35-foot project below Quebec, no contract work was considered necessary in this section as it is expected that a channel 500 feet wide with 35 feet at E.L.W. will be completed by the departmental dredges before the Montreal-Quebec division is finished.

#### RETIREMENT—MR. V. W. FORNERET, CHIEF ENGINEER

The retirement of Mr. V. W. Forneret, Chief Engineer, river St. Lawrence Ship Channel, owing to ill-health, is recorded with great regret. Mr. Forneret, a B.A.Sc. of McGill and a member of the Engineering Institute of Canada, made practically a life work of the river St. Lawrence ship channel for, with the exception of a short time with the Department of Railways and Canals above Montreal, he had been continuously connected with this project from his student days at McGill, when he was employed during his summer vacations as an assistant under the Harbour Commissioners, down to the present time. He served through all grades from junior assistant to chief engineer, holding the latter position for the last twenty years.

His retirement after long and active service from the position of Chief Engineer of Canada's natural route to the Seven Seas, will be a very distinct loss to this route and to the whole country, and his courteous consideration and wise counsel in all matters pertaining to the ship channel will be greatly missed by the department, his staff, the shipping interests, and the public generally.

#### ACCIDENTS IN THE RIVER ST. LAWRENCE, SEASON OF NAVIGATION

##### BETWEEN MONTREAL AND QUEBEC

- May 2—SS. *Hansa*, inward bound stranded on the south side, outside the channel, due to steering gear jamming, sustaining no damage.
- May 16—SS. *Canadian Seigneur*, inward bound sheered in swift current and was in collision with barge *Ottis N. Sheppard*, lying at Bureau wharf, Three Rivers. Barge a total loss.
- May 29—SS. *Aube*, outward bound, grounded on the south side, outside channel, below cap Charles, while anchoring in a fog, sustaining some damage.
- June 13—SS. *Sault St. Louis*, outward bound, with deckload of steel. Lost deckload in steamboat channel above Repentigny. Considerable damage.

- July 20—Yacht *Runabout*, outward bound, stranded outside of channel off Pointe Platon with slight damage.
- August 25—SS. *Finchley*, inward bound, came too close to rockbreaker working at Cap à la Roche curve and fouled breasting wire incurring no damage.
- September 10—Power schooner *Gaspe Trader*, inward bound, went aground on north side, outside channel at Batiscan traverse, in fog, while attempting to anchor. No damage.
- October 2—SS. *Oxford*, outward bound, stranded in a gale with heavy rain on the north side, outside of channel, below Lanoraie, sustaining no damage.
- October 27—SS. *Canadolite*, turning in Montreal harbour, stranded outside the channel near buoy 161 M, sustaining no damage.
- November 29—SS. *Kamir*, outward bound, stranded on the south side of channel in lake St. Peter when she failed to answer her helm. No damage was sustained.
- December 4—Barge *Burma*, inward bound, was cut by ice and sank near south bank of channel between buoys 67L and 69L, lake St. Peter. Total loss.

## BETWEEN QUEBEC AND FATHER POINT

- April 26—Schooner *Daisy*, outward bound, grounded in thick fog on reef off Bicquette island sustaining considerable damage.
- June 14—SS. *Blaresk*, inward bound, grazed rocks in fog at bay of Rocks and was put ashore on White island. Considerable damage sustained.
- June 15—Schooner *F. Mary*, inward bound, while anchoring was struck by ss. *Daghild*, off Ile Reaux, sustaining considerable damage.
- June 25—SS. *Maidenhead*, inward bound, touched slightly while in lower traverse, sustaining no damage.
- June 25—SS. *Lord Strathcona*, outward bound, stranded while off her course at Beaujeu bank. No damage was sustained.
- July 18—SS. *Newaster*, outward bound, collided with lightship at Ile aux Coudres in strong current sustaining considerable damage. The lightship also was damaged considerably.
- July 28—SS. *Wabana*, inward bound, collided with ss. *C. H. Houson* in dense fog near Cape Salmon, both vessels sustaining heavy damage.
- August 4—SS. *Shawnee*, inward bound, stranded in fog and rain on Red islet sustaining considerable damage.
- August 24—Power schooner *J. Bouillon*, outward bound, was in collision with ss. *Athenia* in heavy fog, sustaining only slight damage.
- October 21—Tug *Chateau*, inward bound, stranded on south side of Hare island while off her course.

It will be noted that none of these accidents occurred due to any defect in the ship channel or in aids to navigation.

AVERAGE Depth for each month in the 27½-foot channel (27½ feet at ordinary low water). From Sorel gauge each year May to November

## METEOROLOGICAL SERVICE OF CANADA

REPORT OF JOHN PATTERSON, M.A., F.R.S.C., DIRECTOR

Sir Frederick Stupart after fifty-seven years' service, thirty-four of which was spent as director, retired on June 30, 1929. He entered when the service was being organized and during his period of office has seen it develop from very small beginnings until it has extended over the whole of Canada.

The director attended a meeting of empire meteorologists in London, from August 20 to September 4, 1929, and an international conference of directors at Copenhagen, from September 9 to 21.

The principal object of the conference of empire meteorologists, at which there were 24 representatives from various parts of the Empire, was the discussion of methods of co-operation in meteorological work, especially in connection with marine meteorology, aviation, airships, and agriculture.

At Copenhagen the most noteworthy event, and one which will be outstanding in the history of world meteorology, was the adoption of a uniform code which could be used by all ships, for the wireless transmission of weather messages at stated times, and a similar code for broadcasting by wireless the weather messages from land stations.

Another outstanding event was the decision to organize a second International Polar Year for 1932-33, as a fitting commemoration of the first International Polar Year, in 1882-83. The director was made a member of the committee charged with the organization of this undertaking and also of the International Meteorological Committee.

Three new telegraphic weather reporting stations were opened during the year, Dolbeau and Sanmaur in Quebec, and Haileybury in Ontario. There are now 853 stations throughout the Dominion at which observations are made; at 503 of these the work is performed without remuneration, by voluntary observers, and too much praise cannot be given these faithful workers whose reports furnish such a valuable contribution to the weather information gathered and placed before the public.

At the present time there are 4 storm signal stations in British Columbia, 31 on the Great Lakes, and 86 in the Maritime Provinces, a total of 121. The agents at each of the stations are paid an allowance of \$75 or \$100 per year, according to the length of the season of navigation.

The phenomenal increase in the demand for weather information in connection with aviation, the growing importance of a knowledge of the weather in the forest fire-hazards, and the ever increasing demand for meteorological information by the public generally, have so greatly increased the work of the office that the present staff cannot cope with it, and steps are being taken to increase the staff, both technical and clerical, to meet the situation.

## FORECAST DIVISION

As in previous years the weather of North America was charted twice a day, Sundays and holidays included, and for the northern hemisphere, once a day. The observations in America were taken at 8 a.m. and 8 p.m. E.S.T. and free interchange of weather information has continued between Canada and the United States.

For forecasting purposes reports were received by telegraph from 55 stations under the Canadian Service (including 6 in Newfoundland and 1 in Bermuda); 162 in the United States, including Alaska; 5 in Mexico and 4 in Greenland. An average of 19 reports were sent each morning by the Meteorological Office, London, England, covering the general weather conditions in Europe and the

North Sea. About 20 reports have been received daily from ships on the Atlantic and Pacific, while messages have also been received through the United States Weather Bureau from the Azores and Honolulu. Reports of balloon flights were received daily from 12 Canadian and 16 United States stations, giving conditions in the upper atmosphere.

The observations from the United States consisted of barometer, temperature at time of observation, lowest and highest temperature for the day, direction and velocity of the wind, state of weather, amount of precipitation, kind and amount of cloud, barometer changes and tendency, thunderstorms, fogs, etc. Canadian observations were similar, except all stations are not equipped to report the barometric change. European reports consisted of the barometer, current temperature, direction and force of wind, and state of weather. Additional reports were received daily during the fire season from Ontario, Quebec, and the Maritime Provinces, in connection with fire weather forecasting. These observations were taken at 3.30 p.m. and consisted of humidity, temperature, and rainfall, and at many of the stations in Quebec, the moisture content of the forest floor was also given.

The first reports were received shortly after 8 o'clock morning and evening, and practically all the regular messages reached the office by 8.40, the receipt of which together with outgoing reports at the time, necessitates the employment of three telegraph operators. During the receipt of the reports the forecast staff decoded the messages and entered the data on the various charts, six separate charts being used daily. Isobars and Isotherms were then drawn and by 9 o'clock the maps were ready for diagnosis by the forecast official.

Complete forecasts covering 36 to 48 hours in advance were issued for the 16 areas into which Canada and adjacent waters, excluding British Columbia, are divided, and as heretofore, a forecast service was given for Newfoundland. Forecasts with regard to forest fire weather were given daily for 16 separate districts during the fire season. Storm warnings were issued for the Great Lakes and Maritime shipping, as occasion seemed to warrant. All forecasts were prepared as speedily as possible consistent with accuracy. The necessity for speed has been accentuated by the fact that wireless stations broadcast the information at stated hours, usually allowing a minimum of time for preparation and transmission. Aerial navigation also demanded forecasts much earlier than it was formerly thought possible to give.

A total of 2,578 storm warnings were issued during the year, and of these 91.3 per cent were verified. Of the regular forecasts 86.5 per cent were verified. Bulletins containing weather information were compiled daily and transmitted to many parts of the Dominion. These reports, including incoming and outgoing messages, forecasts, etc., contained on the average approximately 8,000 words per day.

Numerous special forecasts were given covering a very wide field such as for orchard spraying, flying, towing, shipping of perishable goods, and many others. Inquiries by telephone, both local and long distance, were also quite numerous.

#### CLIMATOLOGICAL DIVISION

There are 14 stations fairly well distributed over Canada furnished with barographs which give continuous records of the pressure. From the curves given by these instruments the pressure at each hour, or bi-hourly in some cases, was obtained and published up to the year 1928. Since then, these have not been published, but copies have been made for correspondents.

Continuous records of wind direction and velocity are received from eight stations in British Columbia, 10 in the Prairie Provinces, 11 in Ontario, 10 in Quebec, 11 in the Atlantic Provinces, 3 in the Hudson Straits, 3 in Newfound-

land, and 1 in Bermuda. The hourly direction and velocity of the wind throughout the year has been tabulated for these places and a monthly analysis showing the relative frequency of the wind from eight points of the compass, the number of storms or gales, etc., appears in the monthly record. Copies of the hourly figures have been made for special purposes during the year mainly in connection with legal actions and navigation.

Thermographs were maintained at Victoria, Vancouver, Edmonton, Swift Current, Moose Jaw, Qu'Appelle, LePas, Winnipeg, Toronto, Oak Ridges, Kingston, Montreal, St. Hubert, Quebec City, Fredericton and St. John, from which the temperatures at the different places for each hour have been obtained. Copies or abstracts have been made for, or consulted by, heating engineers and others throughout the year.

Continuous records of humidity have been recorded at 15 places throughout the country; hourly or bi-hourly tabulations of these have been made for office use, and records and copies have been made for correspondents. In addition, there are on file fairly complete hourly records of humidity from 37 stations maintained by forestry officials.

There are a few self-recording rain gauges giving the time of fall of each 1/100th inch of rainfall from which data concerning the maximum intensity of rainfall in heavy storms have been deduced and supplied to engineers upon request.

Sunshine recorders have been in operation at 14 points in British Columbia, 1 in the Yukon, 12 in Alberta, 6 in Saskatchewan, 4 in Manitoba, 15 in Ontario, 9 in Quebec, 3 in New Brunswick, 4 in Nova Scotia, and 1 in Prince Edward Island, from which the amount of sunshine hour by hour has been obtained at these various places.

At 97 stations observations have been taken, one, two or three times daily at fixed hours, of pressure, temperature, rainfall, snowfall, and other phenomena, and an additional 569 stations observed the highest and lowest temperatures of the day, the rainfall, snowfall and miscellaneous phenomena, while at 187 stations, rainfall and snowfall only are measured.

The general monthly analysis of temperature and precipitation, showing differences from normal, is published for all the 854 stations, from which data is received within a reasonable time after the close of the month. The highest and lowest temperatures and the precipitation for every day of the year is published for all but a few of these stations. The meteorological agents at Victoria, Edmonton, Moose Jaw, and St. John assist in gathering and analysing the data which is published in the monthly record comprising 78 pages in all months except January, which has 92 pages. The record is being divided into two parts. In the first part daily temperatures and precipitation and a general analysis of wind, sunshine and pressure, with differences from normal, will be published as expeditiously as possible to meet a more general and insistent demand for this data. The second part to be published later will give more detailed data of other elements.

A monthly weather map, giving a summary of the main features of the weather for the month, based upon data from some 150 stations, received by telegraph for the most part, is issued about a week after the close of the month. For a great number of years this map has also included brief notes on the progress and condition of the principal crops as affected by the weather.

During the year special data have been prepared and issued to numerous correspondents, engineers, agriculturists, intending immigrants, manufacturers, lawyers, litigants and railway claims agents, while special analyses of weather have been made for other departments of the Government, for the provincial

Governments and for scientific institutions in other countries. Data of the climate of other countries has also been supplied upon request, to travellers, manufacturers and others.

*Library Division.*—During the year 434 volumes and periodicals and in addition numerous pamphlets were received.

The distribution of office publications to institutions and individuals included 514 copies daily of the daily weather map, 732 copies monthly of the monthly weather map, 647 copies monthly of the monthly record, 117 copies of the Magnetic Year Book and 241 copies of the Toronto Year Book.

#### PHYSICS DIVISION

*Balloon Sonde.*—December, 1929, was designated by the International Commission for the exploration of the upper air as the international month, and April 15 to 20, 1929, and January 13 to 18, 1930, as international weeks for the sending up of balloons carrying recording instruments. In these periods 45 balloons were sent up from Goderich and 36 from Calgary, but as two of these periods were in the winter, the recoveries were not very good. Only 23 of those sent up from Goderich have been found to date and 13 from Calgary, although some are still being recovered.

Balloons made by a new process were tried in December and three extra large balloons which could be inflated to at least 10 feet in diameter were used, but unfortunately they were not recovered. It is hoped that with the new and larger balloons much greater heights can be obtained.

*Pilot Balloons.*—Pilot balloon ascents were made daily, weather permitting, at 12 stations in Eastern Canada, to obtain the direction and velocity of the wind in the upper air and the height of the base of clouds when present. At the same time observations on the visibility and general weather conditions were made. The results of the ascents were worked out immediately after the flight and telegraphed in code to the central office, where they were entered on a special chart of upper air conditions. A number of the reports were sent daily to the United States Weather Bureau, and we received in exchange a selected list of reports from their upper air stations.

At Toronto, owing to the pressure of other duties the daily pilot balloon flight was limited to twenty minutes, so that high altitudes were not obtained.

During the year special efforts were made to obtain the height of the ceiling or base of low cloud. For this purpose, a small balloon about 3 inches in diameter was inflated until it would rise at 450 feet per minute, and at stations where there was no pilot balloon equipment, it was released and timed until it disappeared in the cloud and thus gave, in a few minutes, the height of the cloud. This effected a very considerable saving and expense, both in balloons and hydrogen. The ceiling is of great importance to pilots and this simple method can be used where there is no regular pilot balloon equipment. A special small balance was designed in the office for inflating these balloons until they had the required lift.

The results of the ascents have been summarized according to international usage and a copy furnished the British meteorological office for their investigations in connection with airship meteorology.

The following table gives the number of ascents at the different stations during the fiscal year:—

## PILOT BALLOON ASCENTS

\*No. obs. Sundays and holidays.

*Air Mail Service.*—The Meteorological Service was asked during the year to supply weather information along the route of the Air Mail Service from Montreal to Windsor, and in the Prairie Provinces from Winnipeg to Calgary and Edmonton. Observers have been appointed at Windsor, London, and Mt. Dennis airports, and other appointments are pending. A weather service is being organized for the Prairie Provinces to meet the requirements of the Air Mail Service.

*Meteorological Instruments.*—The Kew type of barometer is now being introduced as the standard at the stations. It has the great advantage that the mercury in the cistern does not have to be set to a fixed point, an operation that is very uncertain when the mercury becomes dirty. In the Kew instrument the change in the level of the mercury in the cistern is allowed for in the graduation of the scale. These barometers are received with the tubes empty. A special arrangement for filling the tubes with mercury has been designed in the office, which affords a very simple, inexpensive and quick method of filling the tubes under the best possible conditions, so that all tubes are free from air and moisture before being filled.

In preparation for the visit of the British airship R-100 the Dines pressure tube anemometer and direction recorder was modified in the workshop to give in addition to the regular record on a chart giving one revolution per day, a second record in which one revolution occurred every two hours, thus giving a much more open time scale for the study of gusts. The scale for the direction on the regular instrument is very small, and in order to open this out so as to get the angular shift of the wind accurately, the second record for the direction is obtained on a drum 3 inches in diameter attached directly to the direction vane. In this way the amplitude of the direction changes as well as their period can be easily obtained.

Special platinum thermometers were also constructed in the workshop to give the difference in temperature between the air at 4 feet above the surface and 100 feet, while another thermometer gave the air temperature at 4 feet. The 100 feet thermometer was erected on the radio mast at St. Hubert, and the others at its foot. They were connected by cable to the recording apparatus in the meteorological office about a quarter of a mile away, and a continuous

record of the difference in temperature between the two heights, and also of the surface temperature is obtained. These observations are very important when the airship is being moored and while it is at the mast.

An improvement was introduced in the thermometer sheds by putting in louvered tops instead of boards with holes drilled in them; this gives much better ventilation and at the same time more protection from radiation than in the old type. Mr. F. White designed a very much superior frame for holding the wet and dry bulb thermometers and, by rearranging the thermometers in the shed, they are all now easily accessible.

The problem of oiling the anemometer and wind vane has always been a difficult one, but it is believed this has now been largely overcome by the introduction of an automatic oiling device for all the main bearings, and it is hoped that with this system the instrument will require oiling only about once a year.

*Earth Temperatures.*—Daily readings to  $0.01^{\circ}$  F. of platinum thermometers at eight depths were taken during the greater part of the year. It is perhaps worthy of note that the temperature at 4 inches below the surface reached its lowest point on February 4, 1929, while the temperature at the 15-foot depth did not reach its minimum until the 22nd of May. On the other hand, the highest temperature at 4 inches occurred on the 30th of July, while at a depth of 9 feet it did not reach its maximum until the 28th of September.

The maximum and minimum temperatures with the dates on which they occurred and the range at each depth for 1929 are given in the table.

*Evaporation.*—The amount of evaporation from a free water surface in a tank 6 feet square and 3 feet deep sunk in the ground has been measured daily from April to November. The amounts given per month and the rainfall for the same period are given below:—

1929	Evaporation	Rainfall
Month	inches	inches
April.....	1.58	6.08
May.....	2.54	3.76
June.....	3.28	1.45
July.....	3.45	4.43
August.....	3.23	1.94
September.....	2.33	0.78
October.....	1.50	2.44
November.....	0.53 (18 dys.)	3.13 (18 dys.)
Total.....	18.43	24.01

*Sea Water Temperatures.*—Thermographs have been maintained throughout the year on the routes from Vancouver to Hong Kong, Vancouver to Australia, and Montreal or Halifax to Bermuda and the West Indies.

TERRESTRIAL MAGNETISM

Agincourt and Meanook magnetic observatories were maintained in operation throughout the fiscal year 1929-30 without any serious loss of record, although occasionally some loss occurred through failure of the lights. Electric lighting is being installed and by using suitable transformers a 6-volt circuit is to be maintained for the special single filament lamps to be used as source of illumination for the recording instruments by means of which it is hoped more uniformity may be secured in the intensity of the light and less loss of record result.

Large magnetic disturbances were of frequent occurrence. The more important ones were recorded on April 15, 16; May 13; June 10; July 2, 10, 15, 16; August 1, 2, 14, 15; September 7, 10, 11, 14, 22; October 8, 19; November 3, 4, 16; December 4, 5, 6, 16; January 4, 5, 6; February 12, 13, 14, 15, 16; March 1, 2, 12, 13, 14, 15, 16, 24.

The range in declination during disturbance at Agincourt was much smaller than last year, the largest variation being only  $1^{\circ} 42.6'$  on November 3. At Meanook the declination range was also smaller than last year, the largest,  $3^{\circ} 17.6'$ , was recorded September 22. The maximum variation in horizontal force at Agincourt was only 490 gammas, on March 12, while at Meanook, nearly every large disturbance had a range in excess of 1100 gammas.

Absolute observations were made as usual at both observatories in order to keep control of the value of the base of the differential instruments and the computations and reductions of observations were made in the central office.

The 1924 magnetic report was issued in the spring of 1929 and the 1925 report is almost ready for the printers.

Magnetic character tables for 1929 were prepared as usual and forwarded to the International Commission on Terrestrial Magnetism at DeBilt.

Compasses attached to forty-three (43) surveyors' theodolites were compared with the Agincourt standard, and index corrections determined and forwarded to the Surveyor General at his request.

Assistance was given to members of the staff of the Dominion Observatory in standardizing their instruments for use in field work, and photographic records were loaned to both the Dominion Observatory and the Topographical Surveys Branch for use in reducing their field observations.

Many special reports have been requested and furnished on the occurrence of magnetic disturbances, particularly for those investigating correlations with radio phenomena.

The accompanying tables summarize the results at Agincourt and Meanook for the fiscal year 1929-30.

## ASTRONOMY

On one hundred and one days observations were obtained with the 3-inch Troughton and Sims transit telescope of the meridian transits of stars for the purpose of obtaining correct time. The positions of the stars used were taken from the British Nautical Almanac or the American Ephemeris.

Instrument constants were redetermined about once a month using a selected list of not less than ten stars and the most probable values for the different constants were obtained from least square solutions, of the resultant equations.

Time signals were telegraphed to Agincourt once a week in order to check and control the errors and rates of the clocks and chronometers. Each week day at 11.55 a.m. a time signal is transmitted over the fire alarm system for the city of Toronto. Calls for time over the telephone are now almost continuous during office hours and many special calls for sidereal time are also received from surveyors and watchmakers.

Time exchanges were made about once a month with Quebec, St. John, N.B., and Montreal and the average differences were about one-half second.

Observations of sunspots with the 6-inch Cooke equatorial were made on 152 days and on no occasion was the sun's surface free of spots. The mean relative numbers for the various months of the civil year 1929 as deduced from these observations were as follows: January, 83.0; February, 55.9; March, 34.4; April, 50.1; May, 66.9; June, 88.1; July, 84.6; August, 100.2; September, 40.1; October, 74.9; November, 89.5; December, 159.6. Yearly mean 77.3, a decrease of 9.9 from that of the year 1928.

On many evenings visitors were privileged to view the heavens through the Equatorial.

## SEISMOLOGY

The two Milne-Shaw seismographs at Toronto have been maintained in operation throughout the fiscal year and have yielded some very interesting and clear records.

In September, it was found the needle points were getting blunt and new points were adjusted to the booms. The constants were then redetermined and the instruments were found to be working up to the required standard. The driving clocks of both instruments were overhauled and cleaned on September 4 and 18 respectively, and the auxiliary control clock was fitted with a new escapement which materially improved their performance.

Important earthquakes were recorded on—

May 26. Off Queen Charlotte Islands.

June 16. South Island New Zealand.

November 18. Off the southwest coast of Newfoundland.

December 17. Lat. 53 N. Long. 171 E. Aleutian Islands. They were all possibly of submarine origin. The sea wave from the Newfoundland quake caused a large loss of life and property especially at Burin. The epicentre of the earthquake was approximately Lat. 47.5 N. and Long. 58 W. and the time at the epicentre was 20 h. 32 m. 08 s. G.M.T.

Twelve cables were damaged and ten of these cross the Atlantic. The fractures were not confined to one locality, for two of the twelve Western Union cables were severed at a depth of 90 fathoms off the coast of Nova Scotia while a third broke at a depth of 900 fathoms. The area distributed has probably never been exceeded.

The monthly bulletins for Toronto and Victoria giving the times of various waves direct and reflected are forwarded to a large number of seismological stations throughout the world and they afford material in conjunction with other stations for a study of the composition of our earth. There has been a marked

increase in the requests for these bulletins. We also receive in return a number from other stations. Bromide copies of our records are frequently sent by request to various stations and in some instances, the originals are loaned. We continue to supply information to the public and press regarding the distance and location of local and long distance earthquakes just as soon as the records are developed.

#### APPENDIX "A"

##### *Report of the Acting Director of the Quebec Observatory*

Mr. Arthur Smith, the director, has been on sick leave since the 15th of October, 1929. At that time the Director of the Meteorological Service visited this station and gave Mr. Maurice Royer the necessary instruction to carry on the work of the observatory during Mr. Smith's absence.

During the past year the annual meteorological observations have been taken regularly and the results forwarded to the central office. Extracts from the records of the observatory were furnished in answer to enquiries from the newspapers and the public. Special reports were prepared for engineers and others. Information was also furnished to transportation companies carrying perishables and to insurance companies with respect to accidents and other claims.

Written and verbal statements as to the weather conditions were supplied in several cases before the local Courts.

The correct time was given daily by means of the noon-gun and also by telephone in answer to the very numerous daily enquiries from watchmakers and the general public. The correct time was also given, during the navigation season, by means of the time-ball.

The usual time exchanges were made between the central office and this station at regular intervals.

#### APPENDIX B.

##### *The Director of the St. John, N.B., Observatory reports as follows*

Throughout the past year the usual meteorological observations have been continued without interruption. Eye readings of the standard instruments made tri-daily serve to check the continuous records of barometric pressure, temperature of the air, humidity, rainfall, direction and velocity of the wind and bright sunshine, from these automatic recording instruments hourly values have been abstracted as formerly reported.

The monthly reports received from all observing stations in the Maritime Provinces have been acknowledged, checked, summed and meaned and copies of all climatic records are kept in our abstract books for ready reference previous to forwarding to the central office.

The new anemometer and anemograph installed in May, 1929, continues to give excellent service.

The morning weather bulletin received by wire from the central office at Toronto has been printed, published and posted as previously reported. In addition to this a daily and monthly summary is published by the press as well as reports on unusual weather conditions.

During the past year there has been a decided increase in the requests for statements of weather conditions from engineers, claims agents, shipping and transportation companies. Co-operation with the New Brunswick Provincial Government for forest fire protection, the Nova Scotia Power Commission and the Canadian Banana Company has been carried on, increasing the clerical work to a large extent, probably the largest for some years. Telephone calls for the time, forecasts and other information continue to increase.

Comparisons of instruments for many purposes have been made with the observatory standards.

The midnight weather forecasts are broadcast from Radio Station C.F.B.O. at 6 a.m. and 8 a.m. Storm warnings are also put on the air immediately following receipt of warning, as soon as the station is in operation.

Storm warnings have been displayed on the signal mast of the customs house and at Point Lepreau on receipt of telegrams from the central office. Acknowledgment of notice to hoist or take down signals have been rigidly adhered to.

Observations of stars have been made as frequently as possible on available clear nights for the establishment of clock rates. Daily comparisons have been made between the mean time and Riefler clocks and necessary corrections made.

Time signals are automatically sent from our mean time transmitting clock every week day over the Canadian National wires to all their offices in the Maritime Provinces, as well as to the Dominion Atlantic and Canadian Pacific Railway Companies. Automatic signals for broadcasting are sent over the Canadian Pacific Railway land lines to Chebucto Head.

On Tuesdays and Fridays at 10 a.m. and every week day at 3 p.m. the regular time signal is transmitted from our mean time clock by land line to radio station CNRA of the Canadian National Railway, Moncton, N.B., and broadcast to all places within the zone of the station.

The daily time signals in Saint John and Halifax have been given to shipping and others by the dropping of the time-ball on the customs house and citadel respectively.

In Saint John the system of hourly synchronizing office, street and tower clocks continued to give most satisfactory and useful results.

#### APPENDIX C

*The Director of the Gonzales Heights Observatory, Victoria, B.C., reports as follows*

During the past year the regular meteorological and seismological observations have been taken here, and daily weather forecasts issued for the districts of Vancouver island, Kamloops, Okanagan, and Kootenay.

Storm warnings were issued and signals displayed at Victoria, Esquimalt, Nanaimo, and Vancouver.

Special wind and weather forecasts are issued daily through the Dominion radio station at Gonzales at 8.30 a.m. for the benefit of small craft and towing interests on the straits of Fuca and Georgia, and at 8 p.m. a summary of the weather and general forecasts of the wind, etc., is broadcast through this station to shipping on the coast extending from Alaska to Vancouver island.

During the past summer, which was an unusually dry one, special fire weather forecasts and humidity data received from various parts of the province were furnished by the Provincial Forestry Department, and similar information was broadcast each night from the Victoria radio station and from another in Vancouver; also special telegrams were sent to the Dominion Forestry Department at Kamloops for the railway belt in British Columbia.

The public was also informed of impending dangerous dry spells through special notices prepared for the press.

During the past year the new high level stations situated near the Okanagan lake have furnished us with the monthly amounts of snow and rain on the mountains, and these results have been sent to the Dominion Public Works Engineer, who finds them of great assistance in determining the season's lake level and in the prevention of flooding.

*Time Service.*—The clocks and chronometers have given good service as to rates and errors and electric time keeping on the seismographs in the basement. The time gun at military headquarters has been fired regularly by signal from here at noon and at 9.30 p.m. and the time ball on the high city building has been dropped daily at 1 p.m.

The correct time is also sent out daily at 10 a.m. and 7 p.m. on our automatic radio time sender in connection with the Gonzales radio station and the larger station at Estevan Point on the West Coast.

*Seismology.*—The seismographs have been in continuous operation throughout the year and have recorded a large number of earthquakes. Details of the larger ones are wired promptly to Science Service, Washington, to assist in locating their positions as soon as possible after they have occurred.

The daily slow movement of the original N-S and E-W horizontal pendulums have been recorded.

*Inspections.*—During the past year a number of our stations have been inspected and the telegraphic reporting station at Barkerville transferred to Prince George, which through more direct and reliable telegraph connection has proved very satisfactory. Some of the British Columbia Provincial Forestry stations were visited and their humidity instruments adjusted and tested. The Dominion Forestry stations were also visited in British Columbia and in Alberta as far north as Slave lake.

Several addresses have been given on the work of this observatory and numerous college and school classes have come here for instruction. In March I had the honour of addressing the Western Forestry Association meeting held at Portland, Ore.

Commencing this year, the regular airways code message has been telegraphed to Seattle daily at 8.30 a.m. and 1 p.m. Similar messages from Seattle and Port Angeles have been received in return. All three messages are then phoned to the British Columbia Airways Company, who are operating daily passenger planes between here and Vancouver and Seattle.

The Seattle mail plane also makes use of our special weather reports.

The work of this institution is steadily increasing, and so are the visitors who from comments made here and from press notices received from abroad, thoroughly appreciate the instructional value given them.

REPORT OF L. A. DEMERS, DOMINION WRECK COMMISSIONER  
STATEMENT of Formal Investigations and Preliminary Inquiries held during  
the Fiscal Year 1929-30

Name of ship and official number	Port of registry	Remarks
<i>Blairesk</i> , 148841.....	Glasgow, Scotland.	On June 14, 1929, stranded in or near bay of Rocks, river St. Lawrence. Formal investigation was held at Quebec on June 21, before Capt. L. A. Demers, F.R.A.S., Dominion Wreck Commissioner, assisted by Capt. F. W. Boulton and Capt. A. Landry, acting as nautical assessors. Finding: The Court censures master, George Walker, for failure to see to or order a more accurate estimation of the position when passing the White island lightship, also for having failed to even suggest the arrest or diminution of the ship's advance, after having run an appreciable distance without seeing or hearing sounds, when a sounding was then a compelling duty. Pilot Arthur Paquet:—it is apparent that his duties were performed haphazardly, 1st—in failing to establish more accurately his distance and position from lightship; 2nd—in directing a course which was too fine; 3rd—in omitting to compensate for the deviation of the ship's course after meeting a descending vessel; 4th—for maintaining a full speed when failing to hear Cape Dogs foghorn or seeing the light. Pilot Paquet is found in default and fined \$200.00.
<i>Concordia</i> ..... No official number	Genoa.....	On November 7, 1929, stranded at Bersimis, north shore of the St. Lawrence river. Preliminary inquiry was held at Quebec on November 18, by Capt. Demers. Decision: In reviewing evidence of the master who was the only one examined, it was the opinion that seamanlike precautions were not taken. It was suggested that the analysis of the facts obtained at this informal inquiry be submitted to the General Consul for Italy.
<i>Champlain</i> , 141835...	Montreal, Que.....	On October 23, 1929, stranded at or near Chebucto Head en route to Halifax, N.S. Formal investigation was held at Halifax on January 27, 1930, before Capt. Demers, assisted by Capt. E. G. Wells and Capt. Neil Hall, acting as nautical assessors. Finding: The master, Peter Leblanc, appears to have adopted usual and essential precautions such as speed, course, establishing a position on passing Beaver island, also as to look-out and complying with the Board of Trade regulations. Expecting to hear Chebucto Head fog signal, having been doubtful of the nature of the only sound he avers was heard, the master should have kept his lead functioning, though the Court admits that whatever soundings might have been obtained would not have conveyed any idea of the nearness of the land on the course he was following. Master warned and cautioned for the future. The Chief Officer is exonerated.
<i>Connector</i> , 141859....	Montreal, Que.....	On November 24, 1929, stranded on or near Mauger Cay reef, off the coast of British Honduras. Formal investigation was held at Halifax, N.S., on January 28, 1930, before Capt. Demers, assisted by Capt. E. G. Wells and Captain Neil Hall, acting as nautical assessors. Finding: The Court finds first officer, Norman G. Bennett, alone to blame for this casualty, and the Court, feeling it has not been helped by the first officer, finds it incumbent upon itself to waive aside any feeling or intention of leniency. Therefore finding the first officer or Chief Officer, Norman G. Bennett, in default, the Court suspends his Board of Trade certificate No. 0011604 for six months.
<i>Daghild</i> , 139168 and <i>F. Mary</i> , 126935.	Montreal, Que..... Quebec, Que.	On June 15, 1929, collided between Bellechasse island and Crane island, river St. Lawrence. Formal investigation was held at Quebec on June 29, before Capt. Demers assisted by Capt. Chas. Lapierre and Capt. A. Landry, acting as nautical assessors. Finding: The Court unanimously finds the pilot of <i>Daghild</i> , L. P. Langlois, in default. His licence is not dealt with in lieu of which a fine of \$200.00 is imposed. Second Officer, Chas. Allison Johnston, found in default for not bringing vessel to stop and calling the master. His certificate, No. 11713, suspended for two months. Master, Alexander McPhail, is exonerated as he was not made aware of the exact happenings prior to coming on the bridge.

STATEMENT of Formal Investigations and Preliminary Inquiries held during the Fiscal Year 1929-30—*Continued*

Name of ship and official number	Port of registry	Remarks
<i>Farquhar</i> , 126205....	Vancouver, B.C.....	Missing since January 15, 1930. Left Vancouver for Bellingham, U.S.A. Preliminary inquiry was held at Vancouver on February 8, by Capt. J. D. Macpherson. Decision: <i>Farquhar</i> must have suddenly foundered in the straits of Georgia. Six lives lost. There was not sufficient evidence to arrive at a satisfactory conclusion as to the cause of her sudden foundering.
<i>Gogovale</i> , 160182.....	Glasgow, Scotland..	On November 2, 1929, stranded at or near Bentinck island, Juan De Fuca strait, B.C. Formal investigation was held at Vancouver on November 15 and 16, before Capt. J. D. Macpherson, Deputy to the Dominion Wreck Commissioner, assisted by Capt. S. Vint and Capt. R. Archibald, acting as nautical assessors. Finding: The Court finds that no possible blame can be imputed to the master, John William Day Kearney, or to Alfred Elma Lewis, pilot, for stranding of <i>Gogovale</i> , nor any other members of her crew. The primary and probably the sole cause of the casualty was undoubtedly due to the fact that the vessel's engines, through no fault of her engineer officers, failed to respond to the "full speed astern" signal. The Court returns certificates of master and pilot.
<i>Keystate</i> , 147761 and <i>Maggie L.</i> , 96902	Middlesbrough..... Kingston, Ont.....	On November 1, 1929, collided off Clayton, in the upper river St. Lawrence. Formal investigation was held at Montreal on November 19 and 20, before Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. Jos. E. Ouellette, acting as nautical assessors. Finding: The Court exonerates the master of the <i>Keystate</i> , Edward James Smith. The owner of the <i>Maggie L.</i> , Merton Mellow, holding no certificate of competency, cannot be dealt otherwise than to be found in default.
<i>Lord Strathcona</i> , 137447.	Montreal, Que.....	On June 25, 1929, stranded on or near the Beaujeu bank, river St. Lawrence. Formal investigation was held at Quebec on July 12, before Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. A. Landry, acting as nautical assessors. Finding: master, W. L. Clibborn, exonerated, but asked to consider and reflect on the Court's observation as to his absence from the bridge for his future guidance. Third officer, Ivor Maurice Jones, is also exonerated. Pilot Hermenegilde Lachance is held in default. Owing to his past record, which is not without blemish, a fine of \$200.00 is imposed.
<i>Maplebay</i> , 150834 and <i>Pinebay</i> , 150847	Montreal, Que..... Montreal, Que.....	On April 30, 1929, collided in or near lake St. Louis, Que. Formal investigation was held at Montreal on May 2, before Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. Eugene Poirier. Finding: The Court exonerates those on duty on <i>Pinebay</i> . Rene Menard, pilot of <i>Maplebay</i> , found in default; but as he does not hold a pilot's licence, nor was he engaged in any other official capacity than that of pilot, the Court has not power to deal with his certificate. Irene Blais, mate of the <i>Maplebay</i> , is held in default for permitting such an order as that emanating from the pilot to be executed. Being his first voyage in that locality the Court suspends his certificate No. 12033 for a period of two months, to be reckoned from the date he surrenders such certificate. Captain E. A. Booth, of <i>Maplebay</i> , is warned to be more emphatic and explicit in giving his instructions. He is severely censured and warned for not making enquiries and standing by the injured vessel, which conduct is termed criminal.
<i>Maidenhead</i> , 133550..	London, England....	On June 25, 1929, stranded in the lower traverse, river St. Lawrence. Formal investigation was held at Montreal on August 19, before Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. N. Martorell, acting as nautical assessors. Finding: The Court is pleased to exonerate the master, T. Webb; second officer, L. E. Royston, and pilot, A. Paquet, from any blame, their certificates being returned. The remarks made on the matter of log entries are not given as a censure but as a caution in the event of further happenings.

STATEMENT of Formal Investigations and Preliminary Inquiries held during the Fiscal Year 1929-30—*Continued*

Name of ship and official number	Port of registry	Remarks
<i>Maplecourt</i> , 141766...	Montreal, Que.....	On October 20, 1929, stranded on or near Magnetic shoal, Cock burn island, Lake Huron. Formal investigation was held at Toronto on November 21 and 22, before Capt. Demers, assisted by Capt. J. B. Foote and Capt. John Williams, acting as nautical assessors. Finding: Court finds Captain Malcolm Stalker, certificate No. 10462, in default. In view of satisfactory past record, the Court suspends his certificate for three months from April 1, 1930, but recommends a mate's certificate be granted in the interim. As for George Orville Jamieson, first mate, the Court takes cognizance of his short experience of seven months in that important position. Having in mind the execution of the master's order to be called, which order he carried out, his certificate is returned. The Court is of opinion that he should have established a comparison between the standard and steering compass but he, like the master, omitted that obligation. He is therefore cautioned.
<i>Newaster</i> , 142623 and <i>Lightship No. 5</i> 140927.	London, Eng..... Ottawa, Ont.....	On July 18, 1929, collided near Isle aux Coudres, river St. Lawrence. Formal investigation was held at Quebec on July 24 and 25, before Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. A. Landry, acting as nautical assessors. Finding: Captain Clifford Young stands reprimanded for withdrawing the officer of the watch from his position, when he was apprehensive of the position of the vessel seemingly crossing his bow. Thos. Evans, first officer, is exonerated. Pilot Ed. Koenig is found in default, for what the Court declares to be inattention. Owing to his past record, his licence is not dealt with, in lieu of which a fine of \$100.00 is imposed, to be paid within a week of the finding reaching him. He is also ordered to pay the full cost of the investigation, in monthly instalments of \$100.00. The apprentice pilot Lucien Bedard, is not en cause.
<i>Nubian</i> , 131431.....	Liverpool.....	On July 19, 1929, stranded at or near South Point, Anticosti island. Formal investigation was held at Quebec on August 2, before Capt. Demers, assisted by Capt. A. Landry and Capt. W. L. Clibborn, acting as nautical assessors. Finding: The Court finds both the master, Thomas Morrison Watmough, and first officer, Harold Johnson, in default. The assessors unanimously agree that the least the Court can do is to administer a severe reprimand, which is, therefore, given.
<i>Norbiton</i> , 160640.....	London.....	On September 29, 1929, stranded at or about 4 miles west of Cap Chat, river St. Lawrence. Formal investigation was held at Quebec on October 23, before Capt. Demers, assisted by Capt. A. Landry and Capt. R. G. Rees, acting as nautical assessors. Finding: The Court finds that the master, J. C. Jamieson, erred in judgment. The Court being of opinion that a stronger current than usual set the ship landward, he is cautioned against assuming a position without taking measures to verify even partially such assumption. The second officer, J. R. Jones, is exonerated.
<i>Princess Marguerite</i> , 150910 and <i>Princess Louise</i> 150555.	Victoria, B.C..... Victoria, B.C.....	On October 26, 1929, collided in Haro strait, B.C. Formal investigation was held at Victoria on December 3 and 4, before Capt. Demers, assisted by Capt. M. F. Cutler and Capt. C. M. C. Fleming, acting as nautical assessors. Finding: The Court exonerates both Captain R. A. Hunter, of <i>Princess Marguerite</i> and Captain N. J. Sterner, of <i>Princess Louise</i> , their certificates being returned. With respect to first officers, N. W. Thompson and James Lawrence, the degree of culpability has been found to be similar in omission and commission, and they are each held in default. The Court takes cognizance of their long and satisfactory service in the company, but withal cannot overlook the seriousness of this collision. Hence the suspension of N. W. Thompson's mate certificate No. 6211, and James Lawrence's certificate No. 3481 with endorsement for master in the coasting trade, is decreed and ordered by the Court for a period of six months.

STATEMENT of Formal Investigations and Preliminary Inquiries held during the Fiscal Year 1929-30—*Continued*

Name of ship and official number	Port of registry	Remarks
<i>Rochelie</i> , 135231.....	Vancouver, B.C.....	On March 9, 1929, stranded on Boulder reef, off Mary island, B.C. Formal investigation was held at Vancouver on April 3 and 4, before Capt. J. D. Macpherson, assisted by Capt. S. Vint and Capt. R. Archibald, acting as nautical assessors. Finding: The Court finds that the sole blame for stranding must be entirely imputed to John Knox, second mate, for the negligent, careless and imprudent manner in which he navigated the vessel under his charge, by altering her course after sighting a light, which he took no steps to verify and which was not, nor by any stretch of imagination could be, the light which he erroneously supposed it to be. Owing to doubt of authority to deal with his certificate same was returned with reluctance. No possible blame can be imputed to the master, Edward Frederick Talbot.
<i>Ralph Gilchrist</i> , 149493.	Newcastle.....	On July 13, 1929, stranded on or near Superior shoal, river St. Lawrence. Formal investigation was held at Welland on September 18 and 19, before Capt. Demers, assisted by Capt. W. A. Lavigne and Capt. W. J. Cunningham, acting as nautical assessors. Finding: The Court exonerates the master, James Elwood Stewart; also absolves the first mate, J. A. Dennis, but finds second officer, J. M. Watson, in default and suspends his certificate No. 11973 for two months. Pilot Jos. Mailhot, having frankly admitted being asleep, is severely reprimanded and ordered to defray the costs of the investigation in two equal monthly instalments.
<i>Remy-Chuinard</i> .....	Granville, France...	On October 2, 1929, stranded at or near Sandwich point, entrance to Halifax harbour. Formal investigation was held at Halifax on October 11, before Capt. Demers, assisted by Capt. F. G. Rudolf and Capt. W. E. Bennett, acting as nautical assessors. Finding: The Court finds that the master, Marie-Ange Glatre, should have apprised the pilot of his compass defection and when he saw his ship heading towards the land, notwithstanding the pilot's opinion that she was alright, he should have, at least, ordered a diminution of speed. He stands reprimanded and cautioned. With respect to pilot Gordon Hall Latter the Court is of opinion that the sooner he learns to adopt proper navigational methods the greater will be his success. The Court finds that stranding was due to indifferent navigational procedure. Pilot Latter was found in default and his licence suspended for two months from 12th of October, 1929.
<i>Steel Dump Scow</i> No. 27.	.....	On July 31, 1929, sank at or near Champlain curve, river St. Lawrence. Formal investigation was held at Montreal on August 27, by Capt. Demers, assisted by Capt. Chas. Lapierre and Capt. A. LeBrun, acting as nautical assessors. Finding: The court is of opinion that indifference, shirking of responsibility, though all working with the same object in view, is responsible for the sinking of <i>Scow</i> No. 27, and therefore finds both the master of the <i>Dredge</i> No. 15, J. Robidoux, and the mate, A. Thibaudeau, in default; also finds R. Lavallee, master of the attending tug, has indirectly contributed by not carrying out instructions received to operate the syphon and failing to personally examine the condition of the scow.
<i>Sarniadoc</i> , 149496....	Newcastle.....	On November 30, 1929, stranded on Main Duck island, Lake Ontario. Formal investigation was held at Toronto on January 9 and 10, 1930, before Capt. Demers, assisted by Capt. J. B. Foote and Capt. John Williams, acting as nautical assessors. Finding: The Court finds that the loss of the <i>Sarniadoc</i> was due partly to very poor judgment, consequently poor seamanship on the part of the master, Robert Bruce Angus, certificate No. 11790. He stands severely reprimanded for lack of resourcefulness. The chief engineer, F. C. Hurl, is cautioned for his omission to record in his log a special peremptory significant order from the bridge.

STATEMENT of Formal Investigations and Preliminary Inquiries held during the Fiscal Year 1929-30—*Continued*

Name of ship and official number	Port of registry	Remarks
<i>Swiftwater</i> , 147749 and <i>Ignifer</i> , 124212	Blyth..... Montreal, Que.	On November 12, 1929, collided 1½ miles east of Dickinson's landing, Cornwall canal, Ontario. Formal investigation was held at Montreal on December 19 and 20 and April 1, 1930, before Capt. Demers, assisted by Captain Charles Lapierre and Captain N. Martorell, acting as nautical assessors. Finding: The Court having carefully reviewed and weighed the evidence adduced, unanimously finds the <i>Ignifer</i> alone to blame for the collision, but exonerates the master, Captain Allan Patterson, certificate No. 12206 and his officer from any blame. If preventive evolution were omitted or retarded it was due to excusable error of judgment, of omission or commission which, however, is not clearly evidenced.
<i>Turkestan</i> , 140382....	Newcastle-on-Tyne.	On September 28, 1929, stranded in Ste. Marguerite bay, Saguenay river. Formal investigation was held at Montreal on October 28, before Capt. Demers, assisted by Capt. N. Martorell and Capt. Chas. Lapierre, acting as nautical assessors. Finding: The Court finds that the failure of the master, N. B. Smith, to be on deck on the bridge is not a contributory cause to the grounding, but was a temporary forgetfulness of his responsibility. He is therefore cautioned to be more circumspect for the future. The first officer, Wilfrid G. Hind, must, under the circumstances, be held blameless. Pilot Arthur Paquet is severely reprimanded and ordered to defray costs of investigation. No credit can be granted him for the fact that the ship grounded on the only soft ground in that neighborhood and sustained no damage.
<i>Thordoc</i> , 125442.....	Fort William, Ontario.	On November 9, 1929, stranded at or near Point Porphyry, lake Superior. Formal investigation was held at Port Arthur on November 25, before Capt. Demers, assisted by Capt. C. E. Robinson and Capt. Sam Wright, acting as nautical assessors. Finding: The Court finds the master, Ancus Howard Peterson, certificate No. 11467, erred grievously in giving such a fine course for which he is severely reprimanded. Retiring to bed or couch or going to sleep in such circumstances indicates a relaxation of vigilance and forgetfulness of responsibility. For that reason his certificate No. 11467 is suspended for two months from April 1 to June 1, 1930, recommending a mate's certificate in the interim. The leniency shown is due to the fact the master suffered injury to his limb whilst in the execution of his duties at time of abandonment.
<i>Wabana</i> , 131402 and <i>C. H. Houson</i> , 149494.	Halifax, N.S..... Newcastle.....	On July 28, 1929, collided off or near Murray Bay, in the river St. Lawrence. Formal investigation was held at Quebec on August 5, 6 and 7, before Capt. Demers, assisted by Capt. A. Landry and Capt. N. Martorell, acting as nautical assessors. Finding: The Court finds Captain S. E. McDonald of the <i>Wabana</i> , certificate No. 4070, in default: 1st—for giving a misleading and disturbing signal; 2nd—for ordering erasures and substitutions of entries in the chief engineer's log book; 3rd—for leaving vicinity of collision without announcing name of his ship and making obligatory enquiries. For these reasons, principally the last two, the Court notwithstanding previous good record suspends his certificate No. 4070 for twelve months. The Court recommends that for the last six months a certificate as mate be granted him, till the term of the suspension of his master's certificate has expired. Chief Engineer A. J. West, of the <i>Wabana</i> , is severely reprimanded for acceding to master's request, and being party to alteration of entries in log. Third officer, D. Carmichael, is exonerated. Captain C. A. Mahoney, of <i>C. H. Houson</i> , is found in default for altering his log, keeping too much way on his ship; also for altering his course. He is, besides, severely reprimanded for permitting look-out and pilot to absent themselves from their respective duties at such a moment. His certificate No. 9876 is suspended for six months. Pilot Armand Lachance is fined \$100.00 for leaving his post and the master to his own devices dur-

STATEMENT of Formal Investigations and Preliminary Inquiries held during the Fiscal Year 1929-30—*Concluded*

Name of ship and official number	Port of registry	Remarks
<i>Wabana</i> , 131402 and <i>C. H. Houson</i> , 149494.	Halifax, N.S. .... Newcastle. ....	ing fog, when he, Lachance, recognized that he is the adviser, and rightly so. Leslie Pickard, second officer, is exonerated. W. Starke, fourth engineer of the <i>Wabana</i> , is exonerated, and is complimented for the evidence he submitted. In view of the very serious aspects of this collision, in imposing these penalties the Court is acting in a very lenient manner indeed.
Charges of <i>R. Duguid</i> against <i>The Paterson</i> <i>Steamships</i> <i>Limited</i> .		Formal investigation was held at Montreal on February 28, March 1 and 3, 1930, before Capt. Demers, assisted by Mr. J. J. Conlin and Mr. James Boak, engineer assessors. Finding: The Court finds that the charges made against the President and General Manager of the Paterson Steamships Limited by R. Duguid have not been proven and are ill founded, and absolves from any suspicion of blame all officials of the company. Duguid admitted having tampered with the safety valve of the <i>Ontadoc</i> , thereby increasing the pressure of 130 pounds, regulated by the boilers' inspectors, to 160 pounds, at various times during 1926 and maintaining the last pressure throughout 1927 and 1928. He also falsified the statements with respect to pressure in all his trip sheets, thereby giving misleading information to his employers. As Mr. Duguid holds a first class Board of Trade certificate No. 47195, it is recommended that a copy of this judgment be forwarded to the Board of Trade for such action as it deems advisable.

## MASTERS AND SEAMEN BRANCH

## REPORT OF B. F. BURNETT, SUPERINTENDENT

Navigation schools were in operation at Saint John, N.B., at Halifax and Yarmouth, N.S., at Quebec, Que., at Prince Rupert, B.C., and at Kingston, Ont., and marine lectures were delivered at Collingwood, Ont., and at Vancouver, B.C.

Examinations for masters' and mates' certificates were held at Halifax, Yarmouth and North Sydney, N.S., at Borden, P.E.I., at Saint John, N.B., at Quebec and Montreal, Que., at Ottawa, Kingston, Midland, Toronto, Collingwood, Port Arthur and Fort Frances, Ont., at Selkirk and Winnipeg, Man., at Prince Rupert, Vancouver and Victoria, B.C.

Issued during the year 22 masters', 29 mates' and 25 second mates' sea-going certificates of competency; 105 masters', 142 mates' coasting certificates of competency; 38 masters' and 73 mates' inland waters certificates of competency; 60 masters' and 13 mates' minor inland waters certificates of competency, and 38 masters' temporary certificates.

Thirty-one thousand, three hundred and seventy-four seamen were shipped and twenty-nine thousand, four hundred and eighty-three seamen were discharged at sea-ports.

## PILOTAGE REPORT

## CAPTAIN G. E. L. ROBERTSON, DIRECTOR PILOTAGE

The Honourable the Minister of Marine is the Pilotage Authority for the pilotage districts of Montreal, Quebec, Saint John, Halifax, Sydney, and British Columbia, the latter district including all the coastal waters of the province of British Columbia, except the pilotage district of New Westminster. This latter district was brought under the control of the minister by an Order in Council, dated October 30, 1929. All matters relating to pilotage in these districts are dealt with through the local superintendents, at the above mentioned places.

## DISTRICT OF MONTREAL

At the opening of the 1929 season, there were fifty-eight pilots and nineteen apprentice pilots in this district. As during the season, four pilots retired and fourteen new apprentice pilots were appointed, there was a total of fifty-four pilots and thirty-three apprentice pilots on March 31, 1930.

The first arrivals at Montreal, at the commencement of the season, were an ocean-going ship on April 20, a coasting ship on April 24 and an inland water ship on May 1.

The gross earnings of the pilots were \$262,880.08 for the season, as compared with \$329,282.72 for the 1928 season, a decrease of \$66,402.64 from 1928.

The total number of ships piloted inward was 1,917 and outward 1,896, which make a combined total of 3,813 ships with a net tonnage of 11,260,101, as compared with 4,540 ships with a net tonnage of 12,982,710 in 1928. This is a decrease of 727 ships with a net tonnage of 1,722,609 from 1928.

The last departures from the port of Montreal at the end of the season were: a coasting ship on November 30, an inland ship on December 3 and an ocean-going ship on December 7.

By an Order in Council, dated March 8, 1930, and on the recommendation of the pilots, the deduction for the Montreal Decayed Pilots' Pension Fund was increased from 5 per cent to 7 per cent of the gross earnings of the pilots. This fund, which is administered by the Department of Finance, amounted to \$115,211.52, on March 31, 1930.

## DISTRICT OF QUEBEC

At the opening of the 1929 season, there were forty-eight pilots and twenty-two apprentice pilots in this district. During the season three apprentice pilots were examined and given their pilot's licence and one apprentice pilot was appointed. This made a total of fifty-one pilots and twenty apprentice pilots on March 31, 1930.

The pilotage station at Father Point was opened on the 1st of April, with the first ship inward bound on April 19, 1929.

The gross earnings of the pilots were \$242,731.27 for the season, as compared with \$304,590.95 for the season of 1928, a decrease of \$61,859.68.

The total number of ships piloted inward and outward was 3,245 with a total net tonnage of 11,213,710, as compared with 4,045 ships of 15,640,696 net tons in 1928. This is a decrease of 800 ships and 4,426,986 net tons.

The pilotage station at Father Point was closed on December 31, 1929, after the last ship had passed out. The pilot tender *Jalobert* was brought to Quebec for the winter, and the launch *Abraham Martin* was hauled out at Father Point as formerly.

In this district 7 per cent of the gross earnings of the pilots is deducted for the pension fund. This fund is administered by the Quebec Pilots' Corporation and amounted to \$115,013.28 on December 31, 1929. In addition to the pension received from the Corporation, certain retired pilots (thirty-three in number) received an annual allowance from the Government of \$300 each.

## GENERAL—MONTREAL AND QUEBEC

Mr. R. A. Wiallard, Montreal, is the Acting Superintendent for these districts and Mr. F. J. Boulay, Quebec, is the Assistant Superintendent.

All expenses for the pilotage services at Montreal and Quebec are paid out of public funds. These amounted to \$14,562.42 for the district of Montreal and \$63,837.15 for the district of Quebec, the latter including the cost of maintenance of the pilot tender *Jalobert*, and the cost of maintenance of the motor launch *Abraham Martin*.

The pilot tender *Jalobert* and launches in addition to the pilotage work attend also to the Quarantine station, doctors being attached to the *Jalobert* allowing of pratique being given to ships provided there is no contagious disease on board. This does away with delays to ships having to stop at Grosse Isle.

The *Jalobert* lands the mails for all eastern points and also handles mail between ship and aeroplane, and vice versa, for the aerial mail service which was started during the season of 1927. This included 5,700 bags and 1,755 baskets, a large quantity of loose mail, 317 bags of eastern mail outward bound, also 601 bags for the air mail inwards and 902 bags for the air mail outwards. The customs officers are also put on board and taken off ships. Arrangements have now been made with the Department of Agriculture to allow their representatives to board steamers at Father Point to inspect shipments of live stock to Canada. Six services are, therefore, centralized at Father Point, which means a considerable economy to the Federal Government and satisfaction to shipping.

#### DISTRICT OF SAINT JOHN

At the beginning of the season there were eleven pilots and two apprentice pilots in the district; during the year one apprentice pilot was indentured. This left the district with eleven pilots and three apprentice pilots on March 31, 1930.

The gross revenue of the district for 1929-30 was \$48,283.25, a decrease of \$6,559.75. The total expenses, including the up-keep of the pilot tender and motor launch, the repayment on loans and the amount paid into the pension fund amounted to \$17,659.88, leaving a balance to be divided among the pilots of \$30,623.37.

The total number of ships piloted inward was 446 and outward 435, a total of 881 ships with a total net tonnage of 2,458,359 as compared with 957 ships of 2,701,004 net tons in 1928-29, a decrease of 76 ships and 242,645 net tons.

In this district 12 per cent of the gross revenue is deducted for the Superannuation fund. This fund is administered without charge for the Saint John pilots by the Department of Finance. The fund amounted to \$44,855.28 on March 31, 1930.

The auxiliary vessel *Glooscap* is the pilot tender for this district. A motor launch is also used as a pilot tender.

Mr. J. C. Chesley, Saint John, N.B., is the Acting Superintendent of pilots.

The expenses incurred by the department for the up-keep of the office and the salaries of staff were \$2,170.71.

#### DISTRICT OF HALIFAX

There were twenty pilots and three apprentice pilots in this district at the commencement of the 1929-30 season. The three apprentice pilots were examined and given their licences as pilots and no new apprentices were licensed during the year.

The gross revenue for the 1929-30 season amounted to \$113,481.40, an increase of \$11,251.87 over the previous year. The total expenses, including repayment on loans, general maintenance of the two pilot tenders and the amount paid into the Superannuation Fund, amounted to \$29,904.13, leaving a balance to be divided among the pilots of \$79,957.71. In addition the sum of \$3,619.56 has been retained as special reserve for the purchase of equipment for the pilot boats.

The total number of ships piloted inward was 1,450 and outward 1,437, a total of 2,887 ships of a total net tonnage of 10,030,003 as compared with 2,859 ships of a total net tonnage of 9,132,930, an increase of 28 ships and 898,073 net tons over 1928-29.

There are two very staunch vessels as pilot tenders at this port, the *Hebridean* and *Nauphila*, both of which are a credit to the port and the pilotage service.

In this district 5 per cent of the gross revenue is deducted for the Superannuation Fund. This fund is administered without charge for the Halifax pilots by the Department of Finance and, on the 31st of March, 1930, amounted to \$88,093.44.

Captain P. C. Johnson is the Superintendent of Pilots at Halifax, Nova Scotia.

The expenses incurred by the department for the up-keep of the office and staff for the fiscal year 1929-30 were \$6,959.89.

#### DISTRICT OF SYDNEY

There were seventeen pilots in this district at the commencement of the season of navigation. No pilots were appointed during the past year.

The season of navigation opened on April 27, 1929, and closed on January 22, 1930.

The gross revenue of the district amounted to \$53,248.83, a decrease from the year 1928-29 of \$7,111.52. The total expenses including the amount paid into the Superannuation Fund, general maintenance and up-keep of pilot vessel, the repayment of part of the loans for the building of the pilot vessel and the building of the new pilot station was \$15,026.54, leaving a balance of \$38,222.29 to be divided among the pilots.

The total number of ships piloted inward was 1,036 and outward 1,036, making a total of 2,072 ships with a total net tonnage of 2,041,875, as compared with a total of 2,352 ships with a net tonnage of 2,257,544 for the season of 1928-29, a decrease of 280 ships and 215,669 net tons.

In this district 15 per cent of the gross revenue is deducted for the pilots' Superannuation Fund, which is administered without charge by the Department of Finance. On March 31, 1930, the fund amounted to \$49,637.05.

The auxiliary vessel *H. M. Whitney* is the pilot tender for this district.

Captain J. D. MacKenzie is the Superintendent of pilots for the district at Sydney, Nova Scotia.

The expenses incurred by the department and paid out of the public funds amounted to \$5,577.08.

#### DISTRICT OF BRITISH COLUMBIA

By Order in Council, dated March 22, 1929, this district was formed, the payment of pilotage dues being non-compulsory. By-laws under which the district is now being governed were approved by Order in Council, dated October 30, 1929, and appear to be giving satisfaction to the pilots and the shipping interests. The allocation of pilots to ships was taken over on August 28, 1929. From this latter date until October 31, 1929, there were 523 ships of a total net tonnage of 1,361,223, which employed pilots.

Since November 1, 1929, the earnings of the pilots, which had previously been collected by the pilots, have been collected by the Pilotage Authority. From this latter date until March 31, 1930, there were 2,022 ships of a total net tonnage of 4,083,873 which employed pilots.

On taking over the service there were thirty-five pilots. On December 31, 1929, one pilot retired as he had reached the retiring age of 70 years. This left thirty-four pilots on March 31, 1930.

In this district 7 per cent of the gross earnings is deducted for the purchase of Dominion Government annuities or the founding of a pension fund, whichever is found to be the most practicable after consultation with the pilots.

The total gross earnings of the pilots for the period November 1, 1929 to March 31, 1930, was \$103,475.16. The total expenses, including the up-keep of the four pilot launches, repayment on loan, pilots' travelling expenses, super-annuation fund, etc., amounted to \$24,849.93, leaving a balance of \$79,625.23 to be divided among the pilots.

In order to facilitate the purchase of the four pilot launches, which were owned by the several pilots' associations, the department loaned the pilots the sum of \$19,949.90. These four launches have been renamed the *B.C. Pilot No. 1*, *B.C. Pilot No. 2*, *B.C. Pilot No. 3* and *B.C. Pilot No. 4*.

Captain F. T. Saunders, formerly agent of the department at Prince Rupert, B.C., was transferred to Vancouver as Superintendent of pilots in April, 1929.

The expenses incurred by the department for the up-keep of the office staff were \$3,897.06.

#### GENERAL

There are thirty-six Pilotage Authorities constituted under the authority of the Governor General in Council in pursuance of the provisions of the Canada Shipping Act, viz.,—

*Quebec.*—Bonaventure.

*Nova Scotia.*—Bras d'Or, Digby, Annapolis and Bear River, Economy, Glace Bay, Inverness Southern, Louisburg, Minas, Parrsboro, Pictou, Port Medway, Pugwash, Richmond County, St. Anne, St. Mary's Bay, St. Mary's and Liscomb, Tatamagouche and Brule, Tidnish and Northport and Wallace.

*New Brunswick.*—Baie Verte and Cape Tormentine, Bathurst, Buctouche, Caraquet, Charlotte County, Chignecto, Cocagne, Miramichi, Restigouche, Richibucto, and Shediac.

*Prince Edward Island.*—Alberton, Crapaud, New London, and Summerside.

*British Columbia.*—New Westminster.

## ANNUAL REPORT ON SABLE ISLAND

H. F. HENRY, SUPERINTENDENT

On June 10 the schooner *Mary Sears* was sighted on fire about 10 miles northeast of main station. Believe schooner was a total loss. No. S.O.S. sent out to island life boat. The crew was taken off by unknown trawler, which was standing by, and taken to mainland.

On December 30 the schooner *George A. Wood* of St. Johns, Newfoundland, with a cargo of molasses, came ashore on the northwest bar about 3 miles northwest of the West light. The crew landed the next day at low water, when they walked ashore. The schooner came ashore in a southwest gale about 10.30 a.m. It was not sighted until December 31. The keeper of the West light has been dismissed for neglect of duty.

The north boat-house at No. 4 station collapsed on account of sand piling up around roof, causing total damage to one old surf boat. The other one was taken to mainland as it was too heavy for surf work. The life boat which was in a life boat shed at No. 4 station was removed to East light. A shed was built over boat big enough to hold also a beach apparatus wagon which was being sent on by next steamer.

Received by November steamer two beach apparatus wagons and enough apparatus to instal a beach apparatus at East light. Also received two life boats this year.

The Deputy Minister of Marine visited the Sable Island establishment this year.

Mr. Macphail, the Commissioner of Lights and Life Saving Stations, visited the Sable Island establishment this year and made a thorough inspection of the establishment. He also installed an explosive fog alarm apparatus.

The Canadian Biological Service installed apparatus for taking the temperature of the water twice a day, and the weather conditions.

On November 18 earthquake felt on island, causing lamps to sway. Light-keepers reported some mercury spilt out of bowl. No other damage recorded. No tidal wave recorded here.

Various necessary repairs and painting done to the different buildings, and the telephone lines were put in good condition.

Stock on hand.—Thirty-one head of horned cattle, thirty-six trained horses, about one hundred and fifty wild ponies and one sow and one boar.

Had twelve life boat drills during year, and eight beach apparatus drills.

The island was patrolled forty times on account of fog.

Keeper E. Stoddard left island by September steamer, and his son was placed in charge of the West light.

Population.—The population of the island is now forty, comprising the following:—

*Main Station—*

Supt. Henry, wife and family .....	5
T. S. Keating, coxswain.	
O. A. Mason, cook.	
C. Topple, surfman and teamster.	
E. Naugle, surfman and teamster.	
R. McDow, surfman—cow barn.	
C. J. Grégoire, surfman—cow barn.	
W. Irons, surfman—pig house.	
W. Kenny, surfman and temporary—East light .....	8

*No. 2 Station—*

Keeper J. Grégoire, wife and family.....	7
--	---

*No. 3 Station—*

Keeper W. McKenzie, wife, and Assistant Bowes.....	3

## REPORTS OF AGENCIES

## HALIFAX, N.S., AGENCY

During the fiscal year ended March 31, 1930, this agency maintained 151 lighthouses, 1 light in private dwelling, 2 lightships, 8 unwatched lights, 20 pole lights, 9 electric lights, 27 storm signals, 20 diaphones, 1 steam fog alarm, 1 explosive fog alarm, 2 mechanical fog bells, 80 wharves, 6 life-saving stations, 1 humane station, at Sable island, 47 hand horns, 20 gas and whistle buoys, 18 gas and bell buoys, 7 gas-only-buoys, 24 whistle-only-buoys, 63 bell buoys, 78 can buoys, 56 conical buoys, 998 spar buoys, 13 casks, 2 barrels, 14 stakes, 16 bushes, 2 beacons, and four steamers, *Aranmore*, *Lady Laurier*, *Stanley*, and *J. L. Nelson*.

All lights and fog alarms were maintained in proper order throughout the year.

All buoys landed at this agency were overhauled, painted and repaired where necessary.

## CHANGES IN AIDS TO NAVIGATION

Port Latour bell buoy replaced by whistle buoy.

Thrumcap, Lockport, can replaced by bell buoy.

Spar buoy at Frying Pan shoal replaced by can buoy.

Spar buoy at entrance to Port l'Hébert replaced by can buoy.

Spar buoy at Middle shoal, Beaver harbour, replaced by conical buoy.

Spar buoy at Bass rock replaced by conical buoy.

Lighthouse at Bara strait, Iona, changed to pole light.

Pole light at inner Sambro island changed to unwatched light.

Buoy marking wreck of trawler *Good Hope*, Halifax harbour, discontinued.

Lightship No. 24 off Halifax changed from fixed white light to occulting white light.

Cuckold shoal can buoy replaced by bell buoy.

Red spar buoy, west side Salamander shoal, replaced by bell buoy.

Green spar buoy, marking wreck of schooner *Minto*, river Inhabitants, replaced by green can buoy.

Life-saving station at Scatari island moved to Main-à-Dieu harbour. Old lifeboat replaced by motor-driven lifeboat.

Storm signal at Liverpool changed to new position.

Erected new mast and shed to replace storm signal at Port Morien.

Erected new mast to replace storm signal at Breton cove.

Erected new mast to replace storm signal at Neils harbour.

New lighthouses erected at Carters island and Eddy point.

## NEW AIDS ESTABLISHED

Hand horn established at Chester Ironbound.

• Fairway bell buoy at Popes harbour.

Bell buoy established at Goose island.

Bell buoy established at White island.

Two spar buoys in Canso harbour.

Three spar buoys in St. Mary's river.

Seven spar buoys in Sydney upper harbour.

Six spar buoys in Brooklyn, to mark the dredged channel for Mersey Paper Company's pier.

One spar buoy at entrance to Big Lorraine.

Two spar buoys at Hog island.

One spar buoy at Mattee island.

One spar buoy entrance to McNabs cove, Bras d'Or lakes.

## CONSTRUCTION AND REPAIR WORK

*St. Anne's Harbour.*—New crib foundation was built for the tower, tower moved on it and secured.

*Iona Wharf.*—A new pole light was built on shore, close to the site of the old tower, which was demolished.

*Eddy Point.*—A new combined dwelling and light station has been erected on the site of old dwelling, and original tower was cut down one story.

*Cranberry Island.*—A new lighthouse attached to fog alarm building has been built and light at old tower discontinued.

*Jeddore Rock.*—A new landing for boats, with derrick, has been built and storehouse moved to this site; a slipway was built from storehouse to top of island for hauling supplies.

*Sambro Inner Island.*—An unwatched lightstation has been set up to replace one formerly attended to by a keeper.

*Cape Race.*—Rebored compressor was shipped to the station and installed. New dynamo generating set was installed for lighthouse purposes.

*Gull Rock.*—A new diaphone, with pistons, has been installed at this station.

*Cape Roseway.*—New diaphone.

*Dartmouth Depot.*—New crib retaining work, to protect siding, has been built. The lamp-testing and rigging shop has been moved to a new site, thereby providing considerable additional yard storage room for buoys. Dredging to 18 feet, low water mark, was done at front of main wharf.

*Chebucto Head.*—Repairs were made to the D.F. station building, making it habitable for the winter.

*Lightship No. 15, Heath Point, Anticosti.*—Lightship overhauled and repaired.

*Lightship No. 24, Sambro.*—Watertight box for wireless batteries was made and set up. Flasher apparatus set up.

## DOMINION STEAMERS

*C.G.S. Aranmore.*—April 1 to 12—Under repairs. April 13—Coaling. April 15 to 29—Under repairs at agency wharf. May 1 to 4—Recommissioning and testing compasses. May 6 to 9—On western buoy program. May 10 to 19—With supplies to Chebucto Head, Jeddore Rock, lightship and Sable island. May 21 to June 5—On western program. June 7—Under small repairs. June 8 to 18—With supplies to Cape Race and Cape Freels. June 20 to 23—To Cape Anguille with supplies. June 25—Proceeding to Halifax. June 29—At agency wharf under repairs. July 2—Preparing for Hudson Bay. July 3 to 13—Under repairs. July 15-18—Loading for Hudson Bay. July 19—Sailed for Hudson Bay. October 19—Arrived from Hudson Bay. October 21—Blowing down for lay up. October 22 to November 7—Cleaning boilers, preparing for lay up. November 8 to December 17—Laid up. December 18 to 31—Under inspectors' hands. From January 2, 1930, to March 31, 1930—Under repairs at agency wharf and at shipyards.

*C.G.S. Stanley.*—April 2 to 8—Employed in loading buoys and breaking ice at Country harbour. April 9 to 24—On western buoy program, salving western buoys and loading buoys. April 25—Bunkering at Halifax. April 27—Proceeded to Jeddore Rock and Chebucto Head. April 30 to July 26—Under annual overhaul. July 27—Testing compasses. July 29—Bunkering and load-

ing oil. July 30—Proceeded to Charlottetown. August 1 to October 17—Under Prince Edward Island agency. October 18—Bunkering at North Sydney. October 19 to 22—Proceeding to Halifax, preparing for buoy program. October 23-24—Fog and storm. October 25 to 28—To Sambro lightship and Lockport. October 29 to 31—On eastern buoy program. November 1—At agency wharf. November 2 to 4—Examining Halifax harbour buoys. November 5 to 12—On eastern buoy program, on lightship station. November 14 to 30—Proceeded to Prince Edward Island agency. December 1 to 28—Under Prince Edward Island agency. December 30-31—Bunkering at North Sydney and repairs. January 2—Arrived at Halifax. January 4 and 5—Placing new buoy at Little Hope and securing old one. January 7 and 8—Attending Halifax harbour buoys. January 11—With supplies to lightship. January 13-19—Under small repairs. January 20 to February 16—On eastern buoy program, loading buoys and proceeding to Halifax. February 17—Opening channel at Bedford basin. February 18 and 19—Breaking ice at Arichat. February 20—Loading buoys at Louisburg. February 22 to 25—Arrived at Halifax, discharging buoys and loading for westward. February 26 to March 1—On western program. March 2 to 6—Proceeding to Country harbour and Whitehead to break ice. March 8—Icebreaking Bedford basin. March 10 to 15—On eastern buoy program. March 18 to 25—On western buoy program. March 27—Bunkering at Halifax. March 28 to 31—On western buoy program.

C.G.S. *J. L. Nelson*.—April 2 to 29—On harbour duties, inspecting harbour buoys and transporting supplies. April 30—To wreck of *Good Hope*. May 1 to June 9—On harbour duties, transporting supplies—to Mauger's Beach—to Chebucto Head. June 10 to 21—Blown down for repairs. June 22 to July 23—Under repairs at Young's wharf, at marine wharf and at Furness-Withy wharf. July 24 to 29—At agency wharf recommissioning. July 30 to September 25—On harbour duties—transporting supplies—to Mauger's Beach—to Chebucto Head—to lightship with supplies—to Herring Cove—to Jeddore. September 26 and 27—Under small repairs. September 28 to October 17—On harbour duties—transporting supplies—to Mauger's Beach—to Chebucto Head—to Jeddore—with supplies to McNab's Island. October 18—Under small repairs. October 19 to January 30—On harbour duties—transporting supplies—to Mauger's Beach—to Devil's Island—inspecting harbour buoys—to Saul's Island (unwatched light)—to George's Island. January 31—Under small repairs. February 1 to March 26—On harbour duties—coaling—Inner Sambro—clearing ice northwest Arm—inspecting buoys—to Chebucto Head—to George's Island—with supplies to Sambro Island. March 28—Under small repairs. March 29—Placing harbour buoys. March 31—To inner Sambro.

C.G.S. *Lady Laurier*.—April 3 to 6—On eastern buoy program—discharging and loading buoys. April 8 to 14—On western buoy program, bunkering, and loading buoys. April 15 to May 26—On eastern buoy program—loading buoys. May 27—Bunkering at North Sydney. May 29—Blowing down boilers. May 30 to June 9—Loading supplies and cleaning boilers. June 10 to July 20—On eastern supply trip—loading buoys—supplying lightship and harbour stations—transporting chain and bunkering—loading eastern supplies—discharging empties. July 22 to 26—Supplying Chebucto Head and Jeddore—transporting Hudson Bay material—supplying Lunenburg stations. July 27 to 30—Loading western supplies and supplying western stations. August 1 to 3—On eastern supply trip. August 5—Bunkering. August 6 to 8—On western supply trip. August 10—Loading for Sable Island. August 11 to 17—On Sable Island and eastern supply trips. August 19 to 23—Discharging coal and under small repairs. August 24 to September 8—On eastern buoy program—loading supplies for Chebucto Head and Sable Island. September 10 to 14—With supplies to lightship and western buoy program—discharging buoys. September 16 to

21—Placing a Halifax buoy—showing aids to navigation to Harbour Commission—at agency wharf. September 23 to 30—On eastern buoy program—changing Sambro buoys—transferring Hudson strait material. October 2 and 3—At agency, bad weather. October 4 to November 12—With supplies to Chebucto Head—to lightship—on Lunenburg program—relighting Neverfail buoy—on Sable island trip. November 13 to 23—On western buoy program—changing buoys at Terence Bay—to Sambro. December 6 to 12—On eastern supply trip—replacing Smith Rock bell. December 13 to January 8—On western supply program—at agency wharf and replacing Pollock shoal—lifting Cape Breton buoys—to Sable Island for shipwrecked men. January 9, 1930, to February 11—On eastern buoy and supply trip—on Sable Island trip—placing automatic buoy at Sambro. February 12 to 26—On western buoy program—placing Lunenburg buoy—lifting wreck buoy marking *Good Hope*—on Sable Island trip—placing buoy at Egg Island. February 27 to 31—Blowing down for annual overhaul. March 1 to 31—Annual repairs.

#### SYDNEY, N.S., SUBAGENCY

All aids to navigation in this harbour and along the coast line have been maintained in their respective positions, all through the shipping season, and no groundings have taken place in this district; neither has there been collisions or accidents to vessels. This afforded splendid protection to the shipowners and the underwriters, in view of the daily intercourse of ships of ten and twelve thousand tons capacity, arriving and clearing night and day.

Together with the coal fleet of some eighteen steamers, there is also a trade with the provincial ports and Newfoundland as well as a bunker traffic of great importance to the port.

The public landing referred to in last year's report has been finished and is now ready for the docking of vessels and the warehousing of cargoes. Vessels of 35 feet draught can lay with safety alongside the wharf. The Farquhar line is advertised to call here during the summer, the building of this wharf having made this possible.

The aids to navigation in the ports of Sydney, North Sydney and Louisburg, have been placed in position and removed when no longer required, by the government steamers *Lady Laurier* and *Montcalm*, and from time to time the above steamers carried supplies to the lighthouses, fog-alarm stations, the wireless and radio stations, on the west coast of Newfoundland as well as to our own stations.

Winter traffic has been again given the special service of the C.G.S. *Montcalm*, thus enabling the Dominion Coal and Steel Corporation as well as ice bound vessels to navigate with safety during the ice months, on the average February and March.

Patrol duty in Cabot strait required very little attention this spring; ice conditions, due to favourable northwest winds, did not interfere with St. Lawrence shipping. The C.G.S. *Mikula* and *Montcalm* patrolled for a short period, before being recalled.

The ship repair plants, here and at North Sydney, have given good service when required.

The pilotage service as well as the lighthouse and fog-alarm services have been well maintained throughout the season and have given satisfactory results.

Matters of more or less importance in which the Quebec and Charlottetown agencies were interested, received prompt attention.

The Direction Finding Service is found the most important aid to safe navigation, as the information given is definite and most reliable.

## SHIPPING RETURNS FOR THE PORTS OF SYDNEY, NORTH SYDNEY AND LOUISBURG

## PICTOU, N.S., SUBAGENCY

The harbour and roadstead buoys after being thoroughly overhauled and painted were placed in position by ss. *Brant* in the spring and lifted early in December.

The deep-water channel from Abercrombie point to New Glasgow was marked and marks kept in position during season by contractor.

Lighthouse keepers were notified regarding lighting and extinguishing lights.

SS. *Stanley* arrived in port December 25 with ss. *Lovat* and after coaling proceeded on December 27 to Magdalen Islands to render assistance to ss. *Lovat* if required.

During early part of spring daily reports of ice conditions in the harbour and vicinity were made to Superintendent of Signal Service, Quebec.

Oil furnished lighthouse keepers when required.

## VICTORIA, B.C., AGENCY

## LIST OF LIGHTSTATIONS, FOG ALARMS, FOG BELLS, ETC., IN THE VICTORIA AGENCY

- 3 lightstations of the first order.
- 3 lightstations of the third order.
- 9 lightstations using catoptric reflectors.
- 10 lightstations of the fourth order.
- 7 lightstations of the fifth order.
- 8 lightstations of the seventh order.
- 24 fog alarms of the diaphone type.
- 1 fog alarm of Strombos compressed air.
- 4 fog alarms of Reed type.
- 10 fog bells.
- 1 electric siren.

## LIST OF BUOYS AND BEACONS MAINTAINED IN THE AGENCY

## Lighted buoys—

- 1 type 11 gas and whistling buoy.
- 7 type 9- $\frac{1}{2}$  gas and whistling buoys.
- 4 type 8- $\frac{1}{2}$  gas and bell buoys.
- 7 type 8- $\frac{1}{2}$  gas lighted buoys.
- 4 type 4- $\frac{1}{2}$  gas lighted buoys.
- 3 wooden platform buoys with Aga gas lanterns.
- 1 wooden platform buoy with oil lantern.

## Unlighted buoys—

- 3 automatic whistling buoys.
- 4 surface bell buoys.
- 24 steel conical buoys.
- 39 steel can buoys.
- 3 small steel mine buoys.
- 115 wooden spar buoys.
- 16 wooden platform buoys.

## Lighted beacons—

- 30 automatic acetylene gas beacons.
- 8 acetylene gas range beacons using type F.R. 20A flashers with  $\frac{1}{2}$  cu. ft. burners.
- 5 Aga acetylene gas beacons using 200m/m lanterns.
- 60 Aga acetylene gas beacons using 150m/m lanterns.
- 21 electric lighted beacons.
- 13 oil lighted beacons.

Unlighted day beacons, range marks, dolphins, etc.: 69.

## MAINTENANCE AND CONSTRUCTION WORK

*Active Pass.*—Engine room built and duplicate lighting plant installed. New batteries and duplicate charging set supplied. New roof constructed on water tank.

*Amphitrite Point.*—Telephone line installed to lightstation. Addition to dwelling.

*Discovery Island.*—Extensive repairs carried out on fog alarm building, dwelling and water cistern.

*Entrance Island.*—General repairs to lightstation.

*Porlier Pass.*—Repairs and addition to dwelling.

*Trial Island.*—Repairs to derrick.

*Pulteney Point.*—A fourth order lens was installed at the station, replacing seventh order lens formerly in use.

*Pachena Point.*—General repairs to station.

*Nootka.*—Fog alarm building completed and repairs to station.

*Pilot Bay.*—New light established.

*Ballenas.*—Extensive repairs made to station buildings.

*Buoy Service.*—Concrete anchors constructed. Transformation of automatic buoys to Aga system carried out as buoys are available from service. Three 150 m/m Aga lanterns supplied. Sixty-six spar buoys constructed. Six special 4- $\frac{1}{2}$  type Aga buoys constructed for the Fraser river. Four bridles for gas and whistling buoys constructed. Serrated bars placed on five superstructures of small gas buoys.

*Fraser River.*—Annacis Island east beacon rebuilt. Deas Island re-erected. King Edward Cut beacon rebuilt.

*Ucluelet.*—Day beacon established.

*Deception Channel light.*—Aga light established.

*Pill Point.*—Aga light established.

*Nanaimo Harbour.*—Aga light established.

*Salmon Arm.*—New dolphin driven and light established.

*Banfield Creek.*—Day beacon established.

*First Narrows Inner Beacon.*—New beacon was driven 1,450 feet westward of old site and the electric cable was lifted from Brockton Point to the beacon and relaid to Prospect Point.

*Victoria Depot.*—Travelling crane installed in the buoy shed. Trackage system extended and a new derrick erected. New cedar float placed under boat-house.

The life-saving stations at Banfield and Clayoquot were in continuous commission, with the exception of short periods for annual overhaul and in regards the Banfield boat the time necessary for an installation of a Parson's engine. This engine has given the boat an increased speed and a less expenditure for fuel.

Extra patrol vessels were stationed at Banfield during the winter months and patrolmen were on duty along the West coast trail from Banfield to Carmanah.

All Government wharves were inspected during the past year and small repairs made where required.

#### DOMINION STEAMERS

*C.G.S. Estevan.*—April 1 to 23—Under annual overhaul. April 23 to May 8—Recharging and overhauling gas buoys in strait of Georgia. Landing sundry supplies at stations en route. May 9 to 31—Overhauling and recharging gas buoys and beacons from Helmcken island north to Hesquiat south, via the north end of Vancouver island. A new gas buoy was placed off Solander island. Sundry supplies were landed at radio and lightstations en route. June 5 to July 3—Landed distillate and other supplies at stations Victoria to Lennard island. Built a day beacon on rock in Banfield creek. Overhauled gas and whistling buoys from Sydney inlet south to Victoria. July 4 to 16—Repairs to boilers and alteration to steam pipe in firemen's fore-castle. July 17 to 31—Recharged gas buoys in the Fraser river. Watered lightship. Loaded fuel and illuminating oil at Ioco for annual supplies on West coast. August 1 to 29—Employed landing annual supplies at lightstations and radiostations on West coast. September 3 to October 3—Employed in Prince Rupert agency. October 15 to 21—Recharging gas buoys in Fraser river. Landed building supplies Active Pass station. October 21 to 23—Overhauled large unlighted buoys in strait of Georgia and landed annual supply of coal for fog alarms at gulf stations. October 23 to November 8—Placed new keeper at Quatsino lightstation. Moved family of former keeper and effects to Quatsino village. Took on board furniture at Lennard island belonging to late lightkeeper. Recharged several lights on West coast. November 10 to 15—Landed stores and coal at stations in strait of Georgia. November 19 to December 19—Landed Christmas supplies and government stores at lightstations on the West coast. Performed sundry buoy work en route. Replaced Vancouver rock buoy in Prince Rupert agency. December 19 to January 14—Boilers overhauled and repaired. January 15 to 25—Recharging gas buoys in Fraser river; breaking ice in Fraser river. Replaced gas buoys with spar buoys on account of ice conditions. January 26 to February 7—Overhauled large unlighted buoys, strait of Georgia. February 11 to March 22—Made exchange of lightkeepers at Ballenas, Carmanah and Lennard island. Landed supplies at radio and lightstations on west coast, Vancouver island. Recharged several Aga lights on remote parts of Vancouver island. March 22 to 31—Annual overhaul.

*C.G.M. Berens.*—April 1 to 7—Employed landing construction material at Entrance island and recharging beacons in strait of Georgia. April 7 to 16—Recharging acetylene beacons from Maude island north to north end of Van-

couver island. April 17 to 25—Replacing buoys in strait of Georgia. April 25 to May 29—Annual overhaul. May 30 to June 4—Cutting trees obscuring line of light at Discovery island. Landing supplies at sundry lightstations. June 5 to 29—Recharging acetylene beacons from Victoria north. July 8 to 27—Landing construction material and government stores at gulf lightstations. July 28 to August 7—Building a day beacon at Belcarra, Burrard inlet. August 10 to 15—Repairing cable at Calamity Spit light, Vancouver Narrows. August 16 to 31—Distributing year's supply of oil to lightstations, strait of Georgia. September 1 to 21—Overhauling spar buoys, strait of Georgia and Haro straits. Inspecting government wharves with Superintendent of Lights on board. September 22 to October 26—Overhauling and replacing buoys, Victoria to Cape Mudge. October 27 to November 1—Overhauling buoys, Sooke harbour. November 2 to 10—Overhauling Nanaimo buoys. November 12 to 17—Inspecting government wharves, under supervision Mr. G. Halkett, Superintendent of Lights. November 18 to 27—Working at Boundary Bay lights. December 2 to 21—Landing Christmas supplies at lightstations, Victoria to Cape Mudge. January 3 to 11—Taking up and relaying Calamity Spit cable. January 13 to 23—Repairing government wharves, Hope Bay and Ladysmith. January 23 to February 8—Annual leave. February 9 to 18—Recharging Point Roberts lights. Replacing buoys north side strait of Georgia. February 19 to 28—Recharging Aga lights and landing supplies at lightstations. March 1 to 8—Installing new bell striker Calamity Spit. March 9 to 31—Recharging gas beacons.

#### PRINCE RUPERT, B.C., AGENCY

##### GENERAL

The general work of the agency comprised purchase and delivery of supplies for the lightstations, maintenance of aids to navigation, Government steamers and of marine agency, supervising of construction, repairs to lightstations, and reporting on wharves, foreshores and wharfingers.

##### CONSTRUCTION AND MAINTENANCE

Repairs were carried out at the dwelling at Ivory island lightstation.

Windows at Triple island lightstation were all renewed and the building repainted with special concrete paint.

Four Aga accumulators were supplied for buoy and beacon service.

Tramway at the Cape St. James lightstation was entirely rebuilt.

Automatic lighted beacon was established on Village island, Skeena river.

Automatic lighted beacon established on Napier point.

Authority has been received to construct a building for the installation of a radio beacon and also to erect a landing apparatus, at Green island.

Three dolphins were constructed to replace three spar buoys.

A building was constructed to house a radio beacon at Langara island.

##### LIGHTS, FOG ALARMS, ETC.

All lights, fog alarms, and all unlighted aids to navigation were maintained in proper order throughout the year.

##### GOVERNMENT WHARVES

The following government wharves are under the jurisdiction of this agency: Alice Arm, B.C.; Queen Charlotte City and Massett, Queen Charlotte islands; and Port Simpson and Bella Coola, B.C.

Each wharf has been regularly inspected and conditions and traffic reported thereon.

## PUBLIC WHARF, STEWART, B.C.

The above mentioned wharf has been operated throughout the year under the supervision of a wharfinger, Mr. H. C. Bennett, the traffic consisting mainly of passenger and freight vessels of the Canadian National Steamship Company and the Union Steamship Company; and the Ore Carriers of the Coastwise Steamship & Barge Company Ltd.

Freight shipments inward were approximately the same as last year. Outward shipments of ore, including concentrates, amounted to approximately 130,772 tons, which is a little in excess of the previous year.

Tolls, leviable in accordance with the regulations and tariff, have been duly collected, and, less the wharfinger's remuneration of 25 per cent, been forwarded to the department monthly.

Collections for the fiscal year 1929-30 amounted to \$2,708.66.

The mining district adjacent to this wharf is being developed gradually. On the opposite shore of the canal from this wharf the Premier Mining Company are making extensive developments of properties in the Marmot river valley where they have constructed a large permanent wharf with ore bins and an aerial tramway connecting different mines.

## MASSETT WHARF, B.C.

This wharf was operated throughout the year under the direction of both Mr. E. H. Simpson and Mr. C. Harrison as wharfingers. The shipping is comprised of a passenger and freight vessel of the Canadian National Steamship Company, which maintains a regular schedule, also an occasional freighter and a number of smaller gas boats.

Tolls levied in accordance with the regulations and tariff, amounting to \$306.33, were duly collected and forwarded to the department monthly, with the exception of three months interval between the change of wharfingers.

## DOMINION STEAMERS

C.G.S. *Estevan*.—This vessel arrived in this agency on September 10 to attend to the overhauling of the large buoys in this district. While north-bound she overhauled Dall Patch and Vancouver Rock buoys; then after loading necessary material she overhauled Rose Spit, Lawn Point, Dead Tree and Browning entrance buoys. After coaling up she then recharged Spire Ledge, Alford reef and Georgia rock buoys. Having then completed her work in this district she left for the Victoria agency.

C.G.S. *Newington*.—April 1 to 6—Recharged Johnson channel beacons. April 8 to 26—Attended Triple island lightstations; constructing MacIntosh rock beacon; overhauled the northern unlighted buoys and transferred freight. April 29 to May 11—Recharged southern Queen Charlotte island beacons and attended Cape St. James and Langara island lightstations. May 13 to 23—Recharged southern beacons and attended southern lightstations. May 25 to June 6—Recharged local beacons and blew down boilers. June 7 to 23—Landed annual supplies at local and southern lightstations, and established Napier Point beacon. July 2 to 12—Landed annual supplies at local lightstations and Queen Charlotte island lightstations. July 13 to 22—Attended southern lightstations and Boat Bluff beacon. July 23 to August 8—Transferred keepers at Triple island, attended Cape St. James and blew down boilers. August 9 to 17—Attended Triple island and southern lightstations. August 19 to 30—Was engaged in landing coal at local lightstations and Cape St. James. August 31 to September 10—Attended Massett range and Langara island lightstations, and recharged the northern Queen Charlotte island lightstations. September 11 to

24—Attended local and southern lightstations and overhauled unlighted buoys en route. September 25 to October 18—Annual overhaul. October 19 to November 2—Attended Holland rock and Browning entrance buoys. Recharged local beacons; then attended Cape St. James. November 4 to 9—Recharged Straie island beacon and attended Langara island lightstation. November 12 to 17—Attended Green island lightstation and salvaged Vancouver rock buoy. November 19 to December 3—Landed coal at the wireless station, and attended Langara island and Green island lightstations. December 4 to 20—Attended all southern lightstations and local ones. December 21 to January 4—Boilers blown down; then attended Barrett rock, Green island, Triple island, Lawyer island and Holland rock lightstations. January 6 to 11—Attended Klewnugget beacon and local lightstations. January 13 to 30—Attended Cape St. James, Langara island and local lightstations. January 31 to February 17—Boilers blown down and officers on annual leave. February 18 to March 1—After coaling up attended southern lightstations. March 3 to 17—Constructing aerial tramway at Green island and attending Triple island. March 18 to 31—After coaling up attended local lightstations and Cape St. James, and loaded for Langara island.

C.G.M. *Birnie*.—April 2 to 26—This vessel landed supplies at local lightstations; constructed a day beacon on MacIntosh rock, landed submarine cable at agency and transferred freight. April 27 to May 10—Attended Green island and landed supplies at all southern lightstations; then attended local stations. May 11 to June 1—Landed construction material at Triple island; transferred freight to the agency and landed coal at the wireless station. June 4 to 15—Attended Green island; assisted with repairs to the submarine cable for wireless station and recharged Portland canal beacons. June 17 to 25—Transferred freight, obtained sand and gravel, and attended local lightstations. June 26 to July 9—Constructed Village island beacon, assisted with repairs to the submarine cable. July 10 to 31—Annual overhaul. August 1 to 8—Transferred freight, attended local lightstations and overhauled Porpoise harbour spar buoys. August 9 to 16—Recharged northern beacons. August 17 to September 6—Attended local lightstations, landed coal at wireless station and transferred freight. September 7 to 14—Attended Pointer island and Dryad point lightstations and recharged Barrett rock beacon. September 16 to 30—Attended Lizard point, transferred freight for the wireless station and replaced the launch *Rhona*. October 1 to 14—Engines taken down for inspection; then attended local lightstations. October 15 to 21—Attended Addenbrooke island lightstation in connection with transfer of keepers. October 22 to November 7—Engaged in transferring lightkeepers between Triple and Addenbrooke islands. November 8 to 23—Attended local lightstations and assisted with repairs to the submarine cable for the wireless station. November 25 to December 6—Made repairs to Port Simpson wharf; landed supplies at the wireless station and transferred freight. December 7 to 16—Repaired the local float, landed coal at the wireless station, attended local lightstations and recharged Grindstone reef, Shrub island and Casey point beacons. December 17 to 26—Landing coal at the wireless station; transferring local freight; attending spar buoys in Metlakatla passage and replacing the launch *Rhona*. December 27 to January 9—Officers on annual leave. Jan. 10 to 21—Landing coal at the wireless station; relit Grindstone reef and Donald point beacons. January 22 to February 8—The engine was inspected. Coal was landed at the wireless station, freight transferred and the launch *Rhona* replaced. February 10 to 28—Attended Lawyer island and Triple island; transferred local freight; overhauled Porpoise harbour spar buoys and attended local lightstations. March 1 to 8—Transferred local freight, attended Holland rock and Ivory island lightstations, and inspected Boat Bluff site. March 10 to 28—Replaced launch *Rhona* and transferred local freight, the crew

engaged in painting *Rhona*. Landed coal at wireless station. March 29 to 31—Replaced launch *Rhona* and left to attend local lightstations, and Pointers and Richard point beacons.

Launch *Rhona*.—This vessel has been continuously engaged throughout the year, exclusive of the time for overhauling, in the service between Prince Rupert and the agency; transferring mail, passengers and supplies for the agency and the wireless station; making from two to three regular trips every day and extra trips as required, including regular calls at the wireless station float.

#### FORT WILLIAM, ONT., SUBAGENCY

On April 2, the tug *Whalen* started ice breaking in Thunder bay, arriving at Thunder cape April 6 in open water, and, on April 13 left with lightkeepers to be placed at their stations along the north shore, and returned April 15.

The *James Watt* (American) was the first vessel to leave for eastern ports.

On April 15, all shore lights were put in commission, and the ss. *Alberta* (C. P. Ry.) was the first vessel to arrive at Fort William.

On April 30, all spar buoys were put in their respective places; gas accumulators were established at Thunder cape and Pie island.

On May 1, all gas and gas bell buoys were placed in their respective positions; two new spar buoys were established, one on each side of the Thunder Bay Paper Co's slip.

On May 29, two larger air compressor pulleys were sent to Lamb island fog alarm plant.

On June 29, the *Murray Stewart* arrived at Fort William; left for Peninsula harbour July 3, and returned to Fort William July 12; again returned to Peninsula harbour July 16.

On September 3, C.G.S. *Grenville* arrived, after supplying all lightstations in this district, left for eastern ports on September 4.

On November 22, tug *Whalen* started ice breaking in the Kaministiquia river.

On December 4 Hare island gas and bell buoy also Welcome shoal gas buoy were withdrawn for the winter, and new timbers and concrete foundation were placed under the storm signal mast.

On December 7, the steamers *Mathewston* and *G. H. Donovan* were the last vessels to depart for eastern ports, and the steamers *Fernie*, *Selkirk*, and *Beaverton* were the last to arrive.

On December 15, tugs *Whalen* and *Strathmore* left on lighthouse trip to remove the lightkeepers from the following stations:—Slate islands, Battle island, Lamb island, Shaganash island, Passage island, U.S.A., point Porphyry, Trowbridge island, Angus island, Welcome island and Victoria island, and returned on December 21.

On December 26, shipped 5 cases of buoy lanterns to Parry Sound to be overhauled.

During the spring of 1929 eight large links were manufactured and attached to the gas buoy bridles and mooring chains.

In this district there are six Aga beacon lights; there are also five gas buoys in commission in Thunder bay.

One hundred and five pounds of buoy carbide were used in charging the gas buoys in 1929, and tugs were hired on sixteen different occasions for trips to Aga lights, including special trip to Shaganash island light for lightkeeper short of provisions.

Fifty-one spar buoys are maintained in this district, including three at Victoria light station.

## PARRY SOUND, ONT., AGENCY

All Parry Sound unwatched lights, also spar buoys in the inner channels between Parry Sound, Waubaushene, Fesserton, Coldwater, and the channel between Parry Sound and Shawanaga Bay, were maintained by the staff of the agency with the launch *Duncan*.

During the winter of 1930, thirty Aga and fifty-nine Pintsch buoy lanterns were overhauled and tested, after which they were reshipped to their different subdivisions for service.

## BUOYS AND BEACONS

During the year there were maintained in the district: 2 bell buoys, 1 conical buoy, 1 whistling buoy, 21 gas buoys, 287 spar buoys, and 56 day beacons.

## CONSTRUCTION AND REPAIRS

*Cove Island*.—Established new radio beacon.

*Wades Creek*.—Established unwatched Aga light.

*South River*.—Changed light to unwatched Aga.

*Depot Repairs*.—Reshingled roof of agency building.

*Spider Island*.—Repaired lighthouse tower.

*Bayfield Light*.—Established small pole light on wharf.

*Great Duck Island*.—Made new boatways complete with rollers, repaired walks and framework boathouse.

*Mohawk Island*.—Installed unwatched Aga light to be used during the winter months.

*Port Maitland*.—Constructed new fog alarm building.

Built 39 anchors; also built accumulator shed next to boat storage shed. Repairs to docks, boathouse, yard equipment, warehouse, and concrete walk; also extension of yard railway to carbide house and spar buoy storage space.

*Footes Patch Aga Float Light*.—Building new float.

## DOMINION STEAMERS

*C.G.S. Grenville*.—April 15 to May 22—Landed keepers at outlying stations, restored buoy services and relighted beacons, etc., in Georgian bay and upper section of lake Huron. Towed *Murray Stewart*, stranded on cape Smith, to Midland for repairs. Served steam coal to fog alarms.

May 23 to June 24—Delivered construction supplies and equipment to Michipicoten east end and Peninsula harbour. Called at Caribou island, lake Superior, corrected O'Brien Patch buoy; scrubbed and painted ship preparatory to annual supply trip. Loaded lighthouse supplies; coaled at Midland, etc.

## ANNUAL SUPPLY TRIP

Commenced trip on June 24 and terminated same on September 14. Light and fog alarm stations, lightships, etc., within the division being served supplies and inspected as follows:—

North coast, Bruce peninsula, Georgian bay and portion of lake Huron, June 25 to 27.

St. Clair river, lake, and Detroit river to Amherstburg, July 2 to 10, about four days of which were devoted to repairs to the Thames river station.

Lake St. Clair and back to Sarnia, July 11 to 23.

Lake Huron, south shore Manitoulin island, south end of Georgian bay to Parry Sound, July 24 to August 6.

At Parry Sound unloading and loading, bagging coal August 7 to 19.

North end of Georgian bay, North channel to Sault Ste. Marie, August 20 to 23. Lake Superior and back to Soo, also North channel and back to Parry Sound, August 23 to September 14.

From September 14 on to the close of navigation the vessel was employed to the best advantage in connection with the buoy and lighthouse service in the immediate district. She established a new gas buoy in Collingwood harbour on September 27, also a whistling buoy off South Baymouth, Manitoulin island, on October 1. Proceeded to Sarnia and discharged empty coal oil and gasoline drums left over from the annual supply trip. Established a new pole light in Bayfield harbour, lake Huron; crew effected repairs to the Great Duck island light station (boathouse, etc.).

On November 7 the vessel recovered Lockerbie Rock gas buoy, which had gone adrift. She commenced her usual fall work in removing gas and steel buoys, also outlying keepers, on November 20, and completed this work on December 16, when she was laid up at Midland for the winter.

C.G.S. *Murray Stewart*.—April 16 to 29—Landed all keepers in the east end of lake Superior and restored buoys in the Sault Ste. Marie vicinity. Placed beacon lights in operation along North channel, also delivered supplies to light stations, and arrived at Parry Sound.

April 30 to May 13—Assisted *Grenville* in restoring buoy service, etc., in the Georgian bay. Underwent engine repairs at Collingwood. Delivered steam coal to fog alarms.

May 14 to 28—Departed Parry Sound en route for Michipicoten east end, lake Superior, with radio equipment and supplies aboard, but ran aground on Cape Smith, Manitoulin island. Towed to Midland for repairs by *Grenville*. Released from drydock on May 28.

May 30 to June 18—Delivered radio beacon equipment and supplies at Cove island and crew assisted in erection of beacon. Finished June 14. Endeavoured to drive away sawdust obstruction at Parry Sound wharf, but failed.

June 19 to August 14.—Installed fuel tanks at Cove island; delivered construction materials at Michipicoten east end and Peninsula harbour, lake Superior. Crew assisted in construction work at latter station; delivered oil at Slate island; removed equipment from Michipicoten east end and back to Soo. Delivered bunker coal to Gros Cap lightship, whitewashed Caribou island tower, and back to Peninsula harbour, removed men and equipment from there and arrived at Parry Sound on August 14.

August 15 to September 11—At Owen Sound and Midland, cleaned and painted on board. Underwent engine repairs at Collingwood: delivered supplies at Cove island and assisted in certain repairs at Flowerpot, then at Midland for coal, and returned to Parry Sound.

September 13 to 27—Cleaned and painted ship, repaired lighthouse tower at Little Current (Spider island), and back to Parry Sound.

October 1 to December 1—Delivered supplies to stations in Georgian bay, renewed accumulators at certain beacons; underwent repairs, crank shaft at Midland. Chipped and painted hull and upper works; delivered machinery parts at Western island. Took delivery of spare propeller at Owen Sound; attended to beacons in Parry Sound channel; attended to Lockerbie Rock and Collingwood buoys; coaled at Midland.

December 2 to December 14—The vessel was dispatched to Sault Ste. Marie to remove lightkeepers in the east end of Lake Superior, which work she commenced on December 7 and finished on December 14. She also acted as a life-saving ship while on lake Superior on this trip.

The vessel laid up at Sault Ste. Marie for the winter months.

## KENORA, ONT., SUBAGENCY

*Rainy Lake.*—Steamer *Laura A* was engaged from May 2 to 13 inclusive, painting and replacing buoys. Fifty-two buoys were painted and six replaced. July 7 to 12 the above steamer was engaged in establishing additional aids to navigation. Sixteen additional aids were placed. In July day beacons were established for guidance to Couchiching rapids at Pithers point on Rainy lake.

*Lake of the Woods.*—The steamer *Redwing* was engaged from June 22 to 26 painting and replacing buoys on the Lake of the Woods. Thirty new aids to navigation were established, 280 buoys were painted and 75 replaced, the total number of cedar spar buoys now being 385. During the same time twenty-four buoys were painted in Shoal lake. The new unwatched light established at Quick's island was lighted for the first time on May 26, and the light at Bruel point was lighted on May 27.

*Winnipeg River.*—Launch *Moose* was engaged July 26 and 27 painting and replacing buoys in Winnipeg river. Thirty-two buoys were painted and two replacements made.

No Government vessels were employed on any of the lakes.

## SAINT JOHN, N.B., AGENCY

During the past year all aids to navigation in this division have been inspected. The usual annual repairs, cleaning and painting have been carried out at the various stations.

There are under the supervision of this agency one hundred and seventy-five light, fog-alarm and fog-bell stations, classified as follows:—

- 7 unwatched lights, using A.G.A. acetylene.
- 4 fog-alarm stations only.
- 1 fog bomb station.
- 2 fog-bell stations operated by machinery.
- 7 electric lightstations, one of which is a combined light and fog-bell station.
- 1 station using a banner burner.
- 8 stations having piper lanterns.
- 28 vapour lightstations, seventeen of which are light and fog-alarm stations combined.
- 115 stations using duplex lamps, six being combined light and fog-alarm stations.
- 2 stations with two range lights each.

At Peases island a Mammoth No. 3 lamp is maintained in addition to the 55m/m diamond vapour light.

At Mitchener point, where we have a duplex lamp, a second light is maintained of the Mammoth No. 3 type.

Also, the *Lurcher* lightship, a red, steel steamer with two masts, each showing an occulting white light, equipped with diaphone, submarine fog-bell, and radio beacon, and manned by a crew of fifteen, is located on the Lurcher shoal, seventeen miles from Yarmouth, N.S.

## CHANGES IN LIGHTHOUSE AND FOG-ALARM SERVICE

*Amherst Point Wharf Light, N.S.*—The fixed white light, formerly maintained on the outer end of the government wharf at Amherst point, N.S., was discontinued.

*Carr's Brook Light, N.S.*—A pole light was established on the end of the public wharf at Carr's Brook, N.S., showing a fixed white light from a pressed lens lantern.

*Cheney Passage Light, N.B.*—An unwatched light was established on Half Tide rock in the middle of Cheney passage, N.B., showing an occulting white light.

*Economy Light, N.S.*—The fixed white light, formerly maintained on the south side of the river on Marsh Lump at Economy, N.S., was discontinued.

*Little Wood Island Light, N.B.*—A fixed white light, shown from a 7th order lens lantern, was established at Little Wood island, about 100 feet south of the life-boat station dwelling.

*Joggins Light, N.S.*—Repairs to Joggins breakwater, N.S., having been completed, the lighthouse was placed in its former position, and the temporary pole light removed.

*Parrsboro Electric Light, N.S.*—The fixed red light, formerly maintained on the corner of the freight shed on the outer end of the government wharf at Parrsboro, N.S., has been moved shoreward 70 feet, and re-established on the new freight shed.

*Pea Point Alarm, N.B.*—A fog-alarm was installed at Pea point light-station, N.B., consisting of a diaphone operated by air compressed by oil engines, sounding two blasts of  $3\frac{1}{2}$  seconds duration every minute. A white rectangular wooden building was erected on the edge of the bank, about 120 feet east of the lighthouse, for housing the apparatus.

*Whitehead Island Alarm, N.B.*—A fog-alarm was established at Long point, Whitehead island, N.B., consisting of a diaphone operated by air compressed by oil engines, sounding three blasts of 3 seconds duration every minute.

#### MAINTENANCE OF BUOYS AND BEACONS

All the buoys and beacons under the supervision of this agency, including those under contract as well as attended by departmental steamers, have been well maintained during the past year:—

The following is a list of those maintained under contract:—

- 3 barrels
- 3 dropping buoys
- 7 casks
- 3 spindles
- 8 conicals
- 6 cans
- 15 bushed stakes
- 7 miles bushing
- 532 bushes and stakes
- 359 spars

Our departmental steamers have attended to the following:—

- 4 gas
- 35 bell
- 7 whistle
- 6 gas and bell
- 16 gas and whistle
- 56 cans
- 57 conicals
- 109 spars
- 25 spindles
- 20 stakes

At Reeds point, Saint John city, an electric beacon, showing a red and white light, is exhibited from a three-branched lamp post.

## CHANGES AND ADDITIONS TO BUOY SERVICE

*Advocate Harbour Buoys, N.S.*—A red, wooden spar buoy was established off the outer end of the southwest bar, at the entrance to Advocate harbour.

The black, wooden spar buoy, formerly moored off the point at the entrance to the harbour, has been moved to a new position off the outer end of the north-west bar, at the entrance to the harbour.

*Bon Portage North Gas-Buoy, N.S.*—A red, steel, cylindrical gas buoy, showing an occulting red light, has been established in  $3\frac{1}{2}$  fathoms of water off the north end of the shoal extending northward from Bon Portage island.

The red, steel, conical buoy off the north end of the shoal, extending northward from Bon Portage island, has been discontinued.

*Cockerit Passage Bell Buoy, N.S.*—This buoy was moved 3 cables south-eastward to a new position in  $4\frac{1}{2}$  fathoms of water off the entrance to the channel between Robinsons Ball and Bon Portage island.

*Economy Dolphins, N.S.*—In Economy river, N.S., two dolphins were erected about 475 feet above the site of the former lighthouse, one on each side of the river. One dolphin is surmounted by a 6-foot-square daymark, and the other a 6-foot diamond-shaped daymark, the tops of both daymarks being 16 feet above the water, and painted white.

*Goose Bay Buoys, N.S.*—The black can buoy off Frenchman point has been moved southwesterly about 1,200 feet to a new position in 4 fathoms of water, 3 cables  $163^{\circ}$  (S.  $30^{\circ}$  W. mag.) from the point.

*Northwest Ledge Gas and Whistling Buoy, N.S.*—The fixed white light on this buoy was replaced by an occulting white light, automatically occulted at short intervals.

*Sainte Croix River Buoys, N.B.*—A red, wooden spar buoy was established in 5 fathoms of water, about 3 cables  $266^{\circ} 30'$  (N.  $73^{\circ}$  W. mag.) from west extreme of Joe's point.

## METEOROLOGICAL SERVICE

There are under the supervision of this agency eight signal stations, all of which have been inspected during the year just ended, and repairs made where necessary.

## LIFE-SAVING SERVICE

The two life-saving stations under the supervision of this agency, viz., Bay View, N.S., and Little Wood island, N.B., have been inspected during the past year, and repairs made where necessary.

## CONSTRUCTION AND REPAIRS

*Big Duck Island Light and Alarm, N.B.*—New type "B" diaphone with three pistons was installed to replace old one worn out.

*Brier Island Alarm, N.S.*—New type "F" diaphone was installed, with resonator and three pistons to replace the old type "E" instrument worn out.

*Carr's Brook Pole Light, N.S.*—A pole light was established on the end of Carr's Brook public wharf.

*Diligent River Wharf, N.S.*—Repairs to the public wharf.

*Economy, N.S.*—Two dolphins were erected, one on either side of the entrance to the Economy river, as a guide to vessels coming in.

*Lepreau Fog-Alarm, N.B.*—As the old steam fog-alarm machinery was worn out, a new oil unit was installed.

*Little Wood Island, N.B.*—A pole light was established at Little Wood island, to guide vessels into Two Island harbour.

*Marine Depot, West Saint John, N.B.*—The buoy shed at the Marine Depot was repaired and the electric wiring overhauled.

*Pea Point Fog-Alarm, N.B.*—New fog-alarm with all requisite machinery was installed. Also new fog-alarm building erected.

*Point Prim Fog-Alarm, N.S.*—New type "F" diaphone was installed to replace the old one worn out.

*Pompey Ledge Spindle, N.B.*—New spindle erected to replace one carried away by a storm.

*Porter Point Light, N.S.*—Lighthouse moved back 100 feet from the shore as it was being undermined and a new lot purchased on which to place it.

*South-West Head Light, N.B.*—The tower was rebuilt as it had become badly decayed and a new drain and septic tank installed.

*Whitehead Island Alarm, N.B.*—A fog-alarm building, dwelling and boat-house were erected, and the necessary machinery for a new fog-alarm station installed.

#### WORK UNDER WAY AT THE END OF THE FISCAL YEAR AND NOT COMPLETED

*Boar's Head Light and Alarm, N.S.*—New road 12 feet wide by 800 feet long and Right of Way.

*Boar's Head Light, N.S.*—Improvement of light by replacing front occulting light by a spring revolving catoptric apparatus with mercury float.

*Musquash Light, N.B.*—Installation of a modern 1928 model revolving apparatus complete with electrical drive; clockwork mechanism complete with motor drive, reflector, timer, etc., 2-900 W. generating units; erection, freight and wiring.

*Point Prim Light and Alarm, N.S.*—Electrification of fog alarm and light.

#### MAINTENANCE OF WHARVES

There are under the supervision of this agency one hundred and thirty-four public wharves, Hantsport, N.S., having been added during the year just ended.

All of these wharves have been inspected, and repairs made where found necessary.

#### PARTRIDGE ISLAND SIGNAL STATION

Statement of vessels reported from Partridge island, giving total tonnage of same from April 1, 1929, to March 31, 1930.

115 steamers . . . . .	313,769
3 three-masted schooners . . . . .	1,295
7 four-masted schooners . . . . .	6,033
Total 125 vessels	321,097

#### DOMINION STEAMERS

*C.G.S. Dollard.*—This steamer was employed during the fiscal year 1929-30 in buoy and lighthouse service, landing coal and supplies at the various stations under the jurisdiction of the agency.

During the year the steamer was laid off for repairs, as stated: July 25 until September 7—at the Saint John Dry Dock and Shipbuilding Company, for annual overhaul and cleaning of boilers. January 17 until February 3, 1930—cleaning boilers.

*C.G.S. Laurentian.*—Was employed in lighthouse and buoy service under the New Brunswick agency during the fiscal year 1929-30.

During the following periods this steamer was laid off for repairs, as stated: April 1 until 10—cleaning boilers. October 3 to November 2—at the Saint John Dry Dock and Shipbuilding Company, for annual overhaul. March 4 to 11—cleaning boilers.

#### CHARLOTTETOWN, P.E.I., AGENCY

##### GENERAL

During the fiscal year ended March 31, 1930, this agency maintained 15 light and fog alarm stations, 41 lights over fourth order, 105 small lights other than pole lights, 81 pole lights, 5 Aga lights, 7 electric lights, 10 hand fog horns, 1 electric fog horn, 3 life-saving stations, 1 direction finding station and 2 radio beacons, 2 signal stations, 3 meteorological stations, 15 storm signal stations, 1 tidal gauge, 2 Government steamers, and 59 wharves.

##### BUOY SERVICE

All the buoys under the supervision of this agency under contract, as well as those attended by Dominion steamers, were well maintained during the year.

The following buoys were maintained under contract: 262 cans, conicals and casks, 536 spars, 791 stakes, 928 bushes, 6 beacons, and 15 winter spars.

The following were maintained by Dominion steamers: 10 bells, 5 gas and bells, 5 whistles, 4 gas and whistlers, 4 gas buoys, 31 conicals, 23 cans, 4 casks, 24 spars, and 6 beacons.

##### CHANGES IN AND ADDITIONS TO BUOY SERVICE

*Amet Sound, N.S.*—Two steel and two spar buoys established to mark entrance to channel.

*Miramichi River, N.B.*—One red conical buoy formerly moored on west side of channel near Oak point ranges and Grant's beach lights moved 1,000 feet S.W. to north side of channel in 18 feet water; also buoys rearranged to mark new dredged channel.

On opening of navigation, one red and one black spar buoy established on either side of channel S.W. Branch, 1,200 feet below C.N.R. bridge, and one black steel can in 20 fathoms south side of channel in line with Oak point ranges.

One red conical in Sheldrake channel opposite Napan bay discontinued.

*Pokemouche Gully, N.B.*—Five additional stakes placed to mark starboard side of turn in channel in Pokemouche river immediately west of light.

*Shediac Harbour, N.B.*—Red wooden spar buoy established east of the breakwater protecting public wharf at Point du Chene.

##### CHANGES IN AND ADDITIONS TO LIGHTHOUSE SERVICE

*Birch Point, P.E.I.*—Range lights established on northerly extremity of Birch point. Fixed white lights shown from headlight lanterns on masts with white diamond-shaped stationary daymark attached, and sheds at base.

*Cape Tormentine, N.B.*—Electrically operated fog horn established.

*Eastern Harbour, N.S.*—Back light re-established 625 feet 185° from front light. Fixed white light, reflector lantern. Elevation 71 feet. White square wooden tower surmounted by red lantern.

*Entrance Island, Que.*—Established on summit of island S.W. entrance to Mutton Bay, Labrador. Flashing white acetylene unwatched light. Automatic lens lantern—red lantern on white pole with shed at base.

*Entry Island, M.I.*—Unwatched light established on top of cliff N.E. end Entry island. Flashing white acetylene light. Red lantern on white pole with white shed at base.

*Georgetown, P.E.I., R.R. Wharf.*—Front light moved from east side to west of railway wharf.

*Grant Beach Lights, N.B.*—Back light moved about 65 feet N.E. to new position 1,300 feet  $274^{\circ}$  from front light.

*Hay Island Range Lights, N.B.*—New front light built on site of former light near east end of Hay island. Fixed white light shown from headlight lantern on pole with shed at base. Back light moved N.E. to new position 220 feet  $261^{\circ}$  from front light.

*Kouchibouguac Bar, N.B.*—Ranges moved northward to mark new channel.

*Naufrage Gully, P.E.I.*—Established on east side of west breakwater at entrance to Naufrage harbour. Fixed white light shown from lens lantern on white pole with shed at base.

*Neguac Gully, N.B.*—Unwatched, flashing, white, acetylene light established in new position on southwest end sand bar north side of gully entrance. Red lantern on pole with day mark, and small white shed at base.

*Neguac Lower Wharf, N.B.*—New site purchased and light re-established on shore of bay 1,200 feet  $4^{\circ}$  from front light on wharf. Fixed white light in white square wooden tower surmounted by lantern with red roof.

*Pinette Range Lights, P.E.I.*—Set of ranges established. Front light on S.W. end of Pond point. Fixed white light from small headlight lantern on white pole, with shed at base. Back light similar to front light 1,000 feet  $18^{\circ} 30'$  distant.

*St. Louis Gully, N.B.*—Relocated to range with channel.

*Tracadie South, N.B.*—Moved 360 feet  $3^{\circ}$  from former position and now 350 feet from northern side of Gully.

*Repairs.*—The usual annual repairs, cleaning, and painting have been carried out at the various light stations.

#### METEROLOGICAL SERVICE

Most of the storm signal stations were inspected, and the following repairs were effected:—

Georgetown, P.E.I.—Mast, foundation and stays repaired.

Souris, P.E.I.—Tower and hut painted.

Tignish, P.E.I.—Roof of shed resingled; walls repaired; mast and shed painted.

Escuminac, N.B.—Steel tower scraped and painted.

Point du Chene, N.B.—Station painted.

Richibucto, N.B.—New signal mast erected.

Pictou, N.S.—Station painted.

#### LIFESAVING STATIONS

The equipment of the lifesaving stations in the district were inspected, and the following repairs were effected:—

*Cheticamp, N.S.*—Buildings painted and minor repairs. Lifeboat and engine repaired.

*Priest Pond, P.E.I.*—Storehouse roof repaired.

## RADIO TELEGRAPH SERVICE

*Belle Isle D.F. station.*—Insulating material furnished and placed throughout station. Built provision shed.

## DOMINION PIERS

Repairs were effected to the following wharves:—Marine wharf, Charlottetown; Summerside; Pointe Basse, M.L.; Vernon River; Hickey's, McPherson's Cove and Victoria, P.E.I.

## DOMINION STEAMERS

*C.G.S. Banfield.*—Was repaired in the spring of 1929 and fitted out for the season. Laid up again at the Marine wharf, Charlottetown, for winter of 1929-30 under the supervision of this agency.

*C.G.S. Brant.*—Went into commission on May 6, and from that date until May 22 she was placing buoys in Charlottetown harbour, at Pictou, Georgetown, Murray harbour and other points. On May 22 she had her compasses adjusted at Charlottetown. From May 27 to 30 she landed supplies at stations around New Brunswick, and placed buoys at Borden, P.E.I. May 31 to June 2 she was loading supplies at the Marine wharf for the P.E. Island lights. On June 3 she went to Amet island to assist the schooner *Allen F. Rose* off the reef north-west of Amet Island. From June 6 to 15 she delivered supplies to the P.E. Island lights excepting those in Hillsboro bay. June 15 to 18 at Marine wharf taking aboard supplies for New Brunswick lights; engaged in supplying those lights from June 20 to July 11, and from that date until July 16 she was at the Marine wharf, Charlottetown, discharging empties and coaling. July 17 supplied Hillsboro bay lights. From July 18 to 22 at Marine wharf coaling and loading supplies for the Nova Scotia lights. From July 22 to 31 delivering those supplies. From August 2 to 10 she was engaged in endeavouring to locate the wreck of a coal laden barge sunk off Sea Cow head, P.E.I. Coaling and loading supplies for Magdalen island lights until August 14; completed delivering those supplies August 27. From August 27 to September 7 at Marine wharf, Charlottetown, coaling and loading supplies; on September 9 she sailed to deliver the supplies in question to lights on the Nova Scotia coast, and returned on September 13 to have repairs made to motor boat which occupied the time from that date until September 16. From September 17 to 21 completed work which was interrupted when she had to return to Charlottetown for motor boat repairs. From September 23 to 26 on the slip at Pictou. September 28 to October 9, replacing buoys moved while dredging operations were going on in Miramichi bay, looking for sunken barge at Sea Cow head, etc. From October 11 to 15 got compasses adjusted, placed Trenton range light in operation, loaded gravel, and inspected Point Prim buoys. October 16 to 19, at Marine wharf. From then until November 2, inspecting and replacing buoys. November 2 to 7, at Marine wharf preparing winter spars. November 7 to 15, lifting buoys, also from November 20 to December 4. December 6, went up West river to assist schooner caught in the ice, but did not succeed in freeing her. December 9, lifted St. Peter's Island spit buoy which completed the *Brant's* buoy work for the season. From December 10 to January 15, the *Brant* was being laid up, the men having been paid off on the latter date.

*C.G.S. Cartier.*—Was laid up at the Marine wharf, Charlottetown, for winter 1929-30 under supervision of this agency.

*C.G.S. Montcalm.*—Arrived at this agency on May 17 to place out the larger buoys at this agency. She was engaged in this work from May 18 to 28, and also delivered supplies to Bird Rock lightstation during this period. Returned to this agency on October 13. Coaling and loading supplies at the

Marine wharf until October 19 when she sailed to deliver supplies to the lights, from Point Rich to Belle Isle. Completed this work November 1 and proceeded to Quebec.

C.G.S. *Ostrea*.—Was laid up at the Marine wharf, Charlottetown, for the winter of 1929-30 under the supervision of this agency.

C.G.S. *Stanley*.—Arrived at this agency on July 31 to load supplies for some of our northern lightstations. She sailed to deliver those supplies on August 7 and returned to Charlottetown on August 20. Coaling, taking aboard lighthouse supplies until August 27, when she sailed to deliver supplies to our lights from Cape Ray to Point Amour. Returned to Charlottetown September 9. At the Marine wharf cleaning ship, etc., and blowing down boilers until September 30. Then taking aboard supplies for Cape Ray, Cape Anguille and Bird Rock, etc., until October 9. Sailed on October 9 to deliver those supplies. She completed this work and proceeded to Sydney, N.S., to come under the Halifax agency on October 15. Proceeded from Sydney, N.S., to the Magdalen islands on November 19 to lift the Magdalen islands' buoys. She arrived at Charlottetown on November 25 after lifting the Magdalen islands' buoys. Engaged in lifting the Eastern strait and north side P.E. Island buoys from November 26 to December 3. Lifting Northumberland strait buoys December 4 and 5. On December 6 she attempted to rescue a motor boat off Sea Cow head. Returned to Charlottetown on December 8 with Miscouche shoal gas buoy. Engaged in completing the lifting of our large buoys December 10 to 16. Assisting the steamer *Lovat* December 20 to 28 after which she proceeded to North Sydney to come under the Halifax agency.

#### MONTREAL, QUE., AGENCY

Total expenditure for the fiscal year amounted to \$514,195.69, an increase of \$56,838.54 over the 1928-29 expenditure.

#### CONSTRUCTION OF LIGHTS

*Caron Point*.—Improvement in apparatus.

*Contrecoeur-Verchères front*.—Alterations to light in order to bring light into alignment.

*Champlain lower back*.—Reconstruction of light made necessary owing to former structure being struck by lightning and burnt.

*Chenal Dupas*.—Construction of experimental dams for flood test purposes.

*Dowker's Point*.—Construction of new light consisting of concrete pier and storeholder embedded in concrete on end, surmounted by gas buoy lantern. Light being unwatched.

*St. Lawrence River dams*.—Construction of retaining dams.

*Ile Ronde range*.—Improvement of lighting apparatus.

*Ile aux Raisins range*.—Repairs to pier and keeper's dwelling.

*Lake St. Peter lower back*.—Placing of stone for riprap or protection work.

*Lake St. Peter upper back*.—Placing of stone for riprap or protection work.

*L'Original range*.—Moving back light made necessary by undermining of the bank.

*Lachine—Caughnawauga front light*.—Removal of apparatus.

*Oka Wharf light*.—Improvement in apparatus.

*Pointe aux Anglais*.—Change in apparatus in order to make the light an unwatched one.

*St. Placide range*.—Renewal of apparatus.

*Ste. Anne de Bellevue traverse.*—Construction of new concrete pier and repairs to tower. Renewal of apparatus made necessary by former one lost when light turned over by action of ice.

*Varennés light.*—Strengthening lower section of tower.

*Verchères Village front.*—Completion of reconstruction of range.

*Witch Shoal.*—Construction of steel lattice post for range light purposes, to replace present Witch Shoal light.

*Batture St. Antoine traverse.*—Renewal of apparatus.

*St. Onge traverse.*—Renewal of apparatus.

*Windmill point traverse.*—Renewal of apparatus.

*St. Charles point.*—Renewal of apparatus.

*Lake St. Peter Centre Curve No. 2.*—Work in connection with installing gas installation.

Other minor repairs were made to various lightstations where found necessary.

#### MAINTENANCE AND REPAIRS TO WHARVES

All wharves were well maintained during the season and repairs made where necessary.

#### DOMINION STEAMERS

*C.G.S. Argenteuil.*—This vessel is used for buoy service, lighthouse construction, painting and other repair work on Lake St. Louis, Ottawa and Richelieu rivers, delivery of supplies and also was used quite extensively for minor repairs to wharves in the above rivers.

*C.G.S. Emilia.*—This vessel is used in connection with buoy service, such as recharging gas buoys, painting and repairing lighthouses, as well as general construction work and is practically a floating workshop.

*C.G.S. Safeguarder.*—New vessel acquired by the agency to replace the *Shamrock* which was burnt and was employed in buoy service work between Montreal and Portneuf, also in delivering of lighthouse and other supplies to the different lightstations in that section.

*C.G.S. Verchères.*—This vessel is used in such work as maintaining and painting of bank beacons, lighthouse and night and day patrol and inspection work. Recharging and maintaining in order all shore gas stations, towing of scows with construction and maintenance material, and in conjunction with the scow *Acetylene*, for buoy service work.

*Tug Lac St. Pierre.*—This tug was used in conjunction with scow *Acetylene* for buoy service work from Montreal to Portneuf which was made necessary owing to the burning of the *Shamrock*.

Tugs *Bécancour*, *Lavaltrie*, *Laviolette*, *Lanoraie*, and *Varennés*, also barges No. 6, No. 5, and No. 7 were used in spring and fall for buoy laying and raising purposes also in delivering fuel during the season from the depot supply.

#### QUEBEC, QUE., AGENCY

The following aids to navigation were maintained under the control of this agency:—

5 lightships—

*Lower Traverse* lightship No. 20.

*White Island Reef* lightship No. 23.

*Red Islet* lightship No. 3.

*Ile aux Coudres* lightship No. 5.

*Prince Shoal* lightship No. 7.

(All self-propelling, excepting *Prince Shoal* lightship No. 7).

326 lights.

49 machine operated fog alarms, hand fog horns and fog bells.

298 buoys and stakes maintained by contractors.

80 gas buoys.

11 combined gas and bell buoys.

1 bell buoy.

39 unlighted buoys.

12 unwatched gas beacons.

63 day beacons.

33 storm signals (inspected).

86 wharves.

#### AIDS TO NAVIGATION ESTABLISHED

Maguasha pole light.

Hopetown pole light.

Bois Brûlé pole light.

Marsoui pole light.

Red Islet, unwatched aga gas light in operation after closing of navigation.

Upper traverse pier—two unwatched aga gas lights during fall and winter.

St. Jean light—lighted by electricity.

Cape Whittle—fog alarm.

Percé—red spar buoy.

Percé—red buoy to be replaced by black can.

St. Fulgence—gas buoy No. 4-S.

Gas buoy No. 56 B—bell added to the buoy, buoy moved to new position.

Banc Brûlé—pier and lighthouse under construction.

Pointe des Monts—radio beacon.

West Point, Anticosti—radio beacon.

Cape Whittle—radio beacon.

Renfrew—ferry wharf and pier.

Bonaventure—wharf and pier.

Ste. Anne des Monts river—wharf.

Ste. Anne de la Pocatière—wharf.

Notre-Dame du Portage—wharf.

Ste. Flavie—wharf.

St. Simon—wharf.

#### REPAIRS AND ALTERATIONS, IMPROVEMENTS AND CHANGES

Big Shippigan light—old dwelling and outbuildings demolished.

Shippigan Gully entrance range—lights moved.

Caribou range—height of back light increased.

Maisonnette light—new clock-work and reflectors.

Stonehaven light—cast iron lantern removed.

Petit Rocher—light changed from white to red.

Little Belledune light—old clockwork and lens replaced by new clockwork and one reflector.

Chandler back range light—moved.

Cap des Rosiers light—tower and dwelling repaired and painted.

Bagot Bluff light, Anticosti—tower painted and dwelling reshingled.

South-West point, Anticosti—Tower repaired and painted.

West point, Anticosti—dwelling reshingled.

Fame point—repaired shed at landing, road and hill to lighthouse, also cribwork at landing.

Cape Magdalen—repaired lighthouse tower and gallery, also reshingled roof fog alarm building.  
Seven Islands—repaired marine railway.  
Pointe des Monts—upper part lighthouse tower repaired.  
Godbout range lights—new huts.  
Matane back range light—strengthened pole.  
Bicquette island—sheathing on lighthouse tower, repaired and painted.  
Green island light—sheathing on lighthouse tower, repaired and painted.  
Pointe Noire—more powerful hand fog horn.  
Murray Bay back range light—moved.  
St. Laurent—lens replaced by long focus reflectors.  
North Channel, Orleans island—buoy No. 125-B moved.  
New Richmond—re-arrangement of buoys.  
Newport—storm signal mast and shed moved to a new site.

## AIDS TO NAVIGATION DISCONTINUED

Quatachua bay range lights.  
Rivière à la Pipe range lights.  
Ile au Béliier range lights.  
Escoumains spar buoy.  
St. Fulgence conical buoy 4-S (replaced by gas buoy 4-S).  
Cap au Corbeau spar buoy.  
Upper traverse pier fog bell.

## WHARVES

Eighty-eight wharves are under the control of the Quebec Agency; seven new wharves having been added, viz: Bonaventure wharf and pier, Notre Dame du Portage, Renfrew Ferry wharf, Ste. Anne des Monts river wharf, Ste. Anne de la Pocatière, Ste. Flavie, and St. Simon.

## LIGHTSTATIONS, ETC.

All lightstations and storm signal stations were inspected and repairs made where necessary.

## EXPENDITURE

The total expenditure of the agency for the past fiscal year was \$1,270,021.71.

## DOMINION STEAMERS

C.G.S. *Mikula*—This powerful ice-breaker was under the charge and command of Capt. John Hearn for the whole time she was in commission. Her full crew consisted of 82 officers and men. At the beginning of the fiscal year she was occupied in the work of opening the St. Lawrence river channel between Quebec and Montreal. Left Quebec on Sunday, April 14, for ice patrol duty in Cabot strait, and returned on May 20. Arrangements were then made to place the vessel in dry dock preparatory to laying her up for the summer months; she entered dock on the morning of May 27, 1929, and was after that brought back to wharf and prepared for laying up definitely. Throughout that time contracting firms performed work on board. On October 1 part of the engine-room crew was taken on to assist in the work required to prepare the ship for commission, and on October 15 this number was substantially increased. On the return of Capt. Hearn from the *Aranmore*, on October 21, his services were utilized in supervising the work in connection with recommissioning the ship. On November 12 the number of crew was still further augmented, and finally by

November 25 the full complement was aboard, and the first days of December the vessel was in active service above and below Quebec in giving assistance to ships in need. The *Mikula* was utilized in convoying merchant ships, late in December, as far as North Sydney, N.S., where she arrived with some of them on January 20, and then returning to assist the C.G.S. *Montcalm* with the balance of the convoy and bringing them also into North Sydney. After this she went to Anticosti island to the assistance of the ss. *Gaspesia*, and assisted in getting that ship back to her winter base at Murray Bay. She finally returned to Quebec on January 29, and was then employed around the harbour in ice-breaking operations. At the end of the fiscal year she was actively engaged in her ice-breaking operations above Quebec in preparation for the opening of navigation.

C.G.S. *Montcalm*.—At the commencement of the fiscal year the above vessel was stationed at Louisburg, N.S., under the charge and command of Capt. Oscar Mercier. During April she made a trip to the Magdalen islands from North Sydney and back. About the middle of May she was engaged in the work of placing buoys for the P.E.I. agency, including Magdalen islands. She returned to Quebec on May 30, when she was prepared for a lighthouse supply trip, leaving on June 8 for the north shore, Anticosti and Gaspé coast stations and returning on July 2. Preparations were then made to have her enter the dry dock and she did so on July 11, and came out of dock on July 31 and placed at the dock gates where repairs were completed, and she arrived at the King's wharf, under tow, on August 15, and preparations were started for her to make another lighthouse supply trip, and she left on September 1 for the Gaspé coast and Baie-des-Chaleurs, and also *Anticosti* lightship, and returned to Quebec on September 28. On October 3 she left on a further supply trip to Anticosti island stations, including the *Anticosti* lightship, after which she proceeded to Charlottetown, where she arrived on October 12, to prepare for a trip to the Newfoundland and northern stations of that agency. She returned to Quebec on November 4 and was immediately got ready for buoy and ice work, including assistance to ships out of the river at the end of December; she went as far with the ships as North Sydney, and spent the winter at North Sydney and Louisburg, and at the end of the fiscal year she was stationed at Louisburg, N.S.

C.G.S. *Loos*.—This vessel, throughout the navigable season of 1929, was under the charge and command of Capt. Amédée Caron, of L'Islet, Que. Her crew consisted of 20 men, and on long construction or lighthouse supply trips 2 extra deckmen were engaged. At the beginning of the fiscal year the engine-room crew was aboard the vessel, the steward's staff reported for duty on April 11, and the deck crew on April 15. Of small cargo capacity she is principally utilized in connection with the lighthouse service, both for the conveyance of materials for the construction branch and maintenance of lighthouses, and is also employed on work relative to other aids to navigation. From time to time the services of the ship are utilized for buoy service, as an aid to the regular buoy tender *Druid*. All told she made 23 trips, covering a distance of 8,356 miles. The outstanding trips of the *Loos* were as follows: From the middle of April she was occupied in rendering assistance to the *Druid* on buoy service duties, going as far as Manicouagan. Left on May 29 for north shore and Anticosti points on buoy and construction services, and arrived back on June 7. Left on June 11 on a construction trip to Cawee island, West Point and Cape Whittle, and with coal for *Cartier* and construction for radio beacon at Cape Whittle, and returned on June 28. Left on July 3 for Cawee island, Cape Whittle, and other north shore points, including Anticosti island points and Anticosti lightship, on a construction trip generally, and returned on July 20, finally, after having left Quebec on July 19 on a short trip. Left on July 22 for survey work required at

Banc Brûlé, and returned on July 24. Left on July 26 to deliver construction material, supplies, etc., to south shore stations, and on Gaspé coast, and north shore points and lightship *Anticosti*, and returned on August 18. She then went under repair for a good while, entering the dock for drawing of tailshaft, opening up sea cocks and valves, etc., and underwater hull repairs, and also repairs were carried out to crank shaft and bilge keel plate, port and starboard, renewed. On October 16 she left for a supply trip to some points on the north shore, including one place on Anticosti island and two places on the south shore, returning on November 12. After this the vessel was utilized generally in assisting in removing of lightships, placing spar buoys and attending generally to removing buoys. The greater part of the crew was paid off on December 12, 1929, when the vessel was placed in her winter quarters, and she was satisfactorily laid up and all crew dispensed with by the end of December.

C.G.S. *Druid*.—During the whole of the navigable season of 1929 this vessel was under the charge and command of Capt. Edgar Pelletier. Her crew consisted of thirty-five men. As in the past seasons of navigation she was engaged in buoy service work in general, from Platon (above Quebec) to Father Point (below Quebec), covering a distance of one hundred and eighty-six miles. The staff of the steward department was recalled to commence work on April 3, and the deck crew on April 5. The ship made her first trip on April 11 and her last trip on December 4, and was out of commission on December 13, when the major part of her crew was paid off, and she was definitely laid up on December 31. From the very beginning of the fiscal year she was on active service, and was kept regularly and constantly engaged in the work of keeping buoys of all kinds in their positions, examining and looking after the numerous gas and other buoys in this district, as well as maintaining quite a number of beacons and day marks. It is to be noted that the *Druid* is the regular buoy service tender, and that she is also engaged in lighthouse service work from Platon (above Quebec) to Father Point (below Quebec). During the navigable season she covered a distance of 8,400 miles, 1,054.40 hours under run, and her coal consumption 1,981 tons. The services of this lighthouse and buoy tender were also utilized in connection with the towage of lightships to their stations in the spring, and towing them back in the fall, as well as keeping them supplied with necessaries of all kinds during the season of navigation. This vessel also attended to the transportation of workmen and labourers effecting repairs to lighthouses in this district. At all times the *Druid* is kept under steam, ready to leave at a moment's notice when reports reach the agency that gas or other buoys or lights are reported out of position, or are either defective or extinguished, or else for any other need pertaining to navigation arising in the river St. Lawrence between the points mentioned.

*Relief* lightship No. 25.—This lightship was placed in service on July 22, 1929, and was immediately utilized for the purpose of relieving lightship No. 5, which was urgently in need of repairs as the result of damage sustained by being run into by the ss. *Newaster*. She left Quebec on July 23 for the station of lightship No. 5 off Ile-aux-Coudres. Lightship No. 5 returned to her station on August 3, and the *Relief* lightship No. 25 then proceeded to the station of the *Red Islet* lightship No. 3, which came up to Quebec for repairs. *Red Islet* lightship No. 3 returned to her station on August 15, when the *Relief* lightship No. 25 came back to Quebec. She was then employed in giving assistance to the lighthouse and buoy steamer *Druid*, delivering lighthouse and light supplies between Platon (above Quebec) and Father Point (below Quebec), a distance of about 190 miles, repairing and painting buoy beacons, placing and attending to gas and other buoy services, coaling lightships, transporting construction materials, and miscellaneous other services respecting aids to navigation. About the middle of September she was utilized to replace the pilot-tender *Jalobert*

at Father Point. After that she proceeded to the *White Island* lightship station during the time this lightship was undergoing repairs in Quebec. The *White Island* lightship returned to her station on September 22, and the *Relief* lightship No. 25 came back to Quebec. This lightship No. 25 replaced on her station lightship No. 20 which came up to Quebec to enter dock. The *Lower Traverse* lightship returned to her station on October 8, when the *Relief* lightship No. 25 proceeded to the station of the *Prince Shoal* lightship to replace her while under repair in Quebec. On October 16 the *Prince Shoal* lightship was replaced on her station, and the *Relief* lightship proceeded on work pertaining to aids to navigation in the Saguenay river and on her way up to Quebec attended to necessary work on the north shore. She returned to this port on November 3, and was hauled up for annual painting and repairs on the slip of the Morton Engineering and Dry Dock Co., Quebec. She was placed out of commission on December 14. Her crew numbered 20. She made 30 trips, covering 2,125 miles, while in commission. During the whole time she was in service she was under the charge and command of Capt. Diogène Després.

SALVAGE SERVICES RENDERED BY THE QUEBEC SALVAGE AND  
WRECKING COMPANY, LIMITED, FROM APRIL 1, 1929, TO  
MARCH 31, 1930

1929

May 25 to 27.—SS. *Lord Strathcona* towing dredge *Le Tourneau* from Quebec to Yamachiche.

June 8 to 11.—British steamer *Fair Lake* was reported ashore on Brion island. SS. *Lord Strathcona* left Quebec at 3.40 p.m. The *Fair Lake* floated before the arrival of the *Lord Strathcona*. The Master of the *Fair Lake* reported the loss of both bow anchors and the *Lord Strathcona* was engaged to convey the *Fair Lake* to Quebec. The *Fair Lake* arrived at Quebec, June 11, at 9.30 p.m.

June 14 to July 14.—British steamer *Blairesk*, with cargo of 5,000 tons Scotch anthracite, was beached and partially submerged on northern side of White island. SS. *Lord Strathcona* and barge *GTD* left Quebec at 9 a.m., June 14, and on arrival found the *Blairesk* flooded throughout with the after decks level with the water. On July 9 the vessel was pumped down and floated and towed to Quebec, where she arrived at 11 p.m. on July 10. Divers temporarily repaired her bottom; salvage pumps and pump engineers were maintained on board until cargo was removed and vessel was delivered to her master July 14.

July 17.—Canadian steamer *Saguenay*. Diver from the *Lord Strathcona* examined ship's propeller and removed wire rope.

July 19 to August 3.—British steamer *Nubian*, with general cargo, stranded on the south side of Anticosti. SS. *Lord Strathcona* with barge *GTD* in tow left Quebec at 3.20 p.m. July 20, and on arrival found the vessel leaking in Nos. 1, 2 and 3 double bottoms and bilges. Cargo was removed, leaks were checked, double bottoms placed under air and at 1.10 a.m. July 24 the *Nubian* was floated. She proceeded under her own power with the *Lord Strathcona* convoying and arrived at Quebec at 6.30 p.m. July 26. Double bottoms were held under air while cargo was discharged and ship was delivered August 3.

July 29 to August 3.—British steamer *Wabana*, loaded with coal, was beached off shoals of Ste. Anne, St. Roch traverse. This vessel was in collision off Murray Bay and beached. SS. *Lord Strathcona* left Quebec at 1 p.m. July 29 and arrived at 6.40 p.m. The *Wabana* had a hole about 14 feet fore and aft and 4 feet wide in the starboard side of No. 1 hold at the loadline. Temporary patch was placed over the injury, cargo was jettisoned so that pump suction could be installed and ship was floated at 11 p.m. July 31. Water was pumped

down, salvage pumps installed for the voyage to Quebec, where the *Wabana* arrived at 5 p.m. August 1. Salvage pumps and pump engineers were retained on board until cargo was discharged and service finished August 3.

August 9 and 10.—Our salvage men and salvage equipment were used in taking borings in the St. Charles river.

August 28 to October 18.—During this period the company rented at various times 6-inch steam pumps to Merritt-Chapman & Scott, Limited, for use in construction work.

September 11 to 21.—French steamer *Baucis*, loaded with grain, stranded on the east side of Anse Eclair, strait of Belle Isle. SS. *Lord Strathcona* sailed from Quebec at 11.30 p.m. September 11 and arrived off the *Baucis* at 7 p.m. September 14. The *Baucis* was stranded on rocky bottom, leaking in forward holds, shaft tunnel and all double bottoms full except No. 1, rudder and stern frame carried away, with deep water not far off from the ship. The services of the *Lord Strathcona* were not accepted until 9 a.m. September 16. Holes were burned in her side about 10 feet below deck and grain jettisoned through these holes from Nos. 2, 3 and 4 hatches, and bags of grain jettisoned from No. 1 hold. Heavy seas caused operations to be discontinued and patches were placed over the holes in ship's side. Cargo was discharged during the following day until evening, when strong wind and rough seas caused operations to be discontinued. Early in the morning on September 18 instructions were received to discontinue all operations, as it was the intention to abandon ship. The *Lord Strathcona* arrived at Quebec at 10.45 a.m. September 21.

September 29 to October 24.—British steamer *Norbiton*, in ballast, stranded west of cap Chat. SS. *Lord Strathcona* with barge *GTD* left Quebec about 2.50 p.m. September 29 and arrived off the *Norbiton* at 3.00 p.m. September 30. The *Norbiton* was found with Nos. 1, 2, and 4 holds full of water and tanks full. Concrete patches were placed over the damage in the bilges, leaks were plugged by diver, pumps installed and temporary repairs completed October 15. During this day the ship was pumped down and at 12.00 midnight was floated. October 16—*Norbiton* proceeded under convoy of the *Lord Strathcona* and arrived off shipyard at Lauzon at 2.00 p.m. October 17. The *Lord Strathcona* returned to cap Chat to recover beach cables and anchors and service ended at 7.30 p.m. October 24.

November 7 to 17.—Italian steamer *Concordia*, with general cargo, stranded on north shore of St. Lawrence near the mouth of the Bersimis river. SS. *Lord Strathcona* with barge *GTD* in tow left Quebec about 1.40 p.m. November 7, and arrived off the *Concordia* at 11.00 a.m. November 8. At 1.15 p.m. November 9 the master accepted the services of the *Lord Strathcona*. Cargo lighters were obtained, cargo was discharged, and at 11.00 a.m. November 13 the *Concordia* was floated. The stern frame and rudder were carried away at the time the *Concordia* stranded and the *Lord Strathcona* with tug *Chicoutimi* towed the vessel to Quebec, where she arrived at 2.30 a.m. November 15. The *Lord Strathcona* returned to Rimouski for barge *GTD* and service ended at 7.30 a.m. November 17.

November 30 to December 4.—British steamer *Kamir*, loaded with grain, stranded near the upper end of lake St. Peter. About 10.30 a.m. November 30 ss. *Lord Strathcona*, by request, was held in readiness to proceed to the ship. December 2, at 3.00 a.m., the *Lord Strathcona* left Quebec and arrived off the *Kamir* at 1.25 p.m. December 2. About 11.45 a.m. December 3 the *Kamir* was floated and at 7.00 a.m. December 4 the *Lord Strathcona* assisted in towing the *Kamir* to Quebec, where she arrived at 3.00 p.m. December 4.

December 31.—Six-inch salvage pump was rented to Morton Engineering and Dry Dock Company, Ltd., for service over period of five days.

REPORT OF SALVAGE SERVICES RENDERED BY THE PACIFIC  
SALVAGE COMPANY, LIMITED, DURING THE YEAR 1929

January 3 to 7.—SS. *Salvage King* proceeded from port to a point 206 miles south by west from Flattery to tow the ss. *Alloway* to port.

February 9.—SS. *Salvage King* left port at 9.30 a.m., proceeding to Dutch harbour to pick up the ss. *Alloway*, 300 miles southwest of that point, and for the ss. *Havilah*, anchored in Dutch harbour with turbine trouble. Recalled to port at 2 p.m.

March 1 to April 28.—SS. *Salvage King* left port at 2 a.m., proceeding to Dutch harbour to pick up ss. *Havilah*, in trouble, and tow her to Osaka, Japan.

March 16 to April 4.—SS. *Salvage Queen* left port to proceed to the assistance of ss. *A. L. Kent*, ashore in Johnson straits. Succeeded in floating the vessel.

May 4 to 7.—Tug *Albert* reported sunk at Port Angeles harbour. SS. *Salvage Queen* proceeded to her assistance; floated the vessel.

May 11 to 13.—Received word at 5 a.m. that M.S. *Boobyalla* was on fire off Destruction island. SS. *Salvage King* proceeded to her assistance, and although everything possible was done to fight the fire it had already gained too great a hold on the vessel and she was proclaimed a total loss.

July 25 to September 19.—Received word July 25 that the ss. *Golden Forest* was badly ashore and in need of assistance at Lost Harbour, Alaska. SS. *Salvage King* proceeded to her assistance and after extensive operations succeeded in refloating the vessel. On the journey south to Seattle the *Golden Forest*, in command of her own master and special pilot, again went ashore in bad fog. Vessel was so badly damaged that she was declared a total loss and the *Salvage King* returned to Victoria.

October 10 to 13.—Seine boat *Gradac* ashore at Kyuquot sound. SS. *Salvage King* proceeded to her assistance, successfully refloated the vessel and brought her to Victoria.

October 13 to 15.—SS. *Empress of Canada* ashore on Albert Head in dense fog. SS. *Salvage Queen* proceeded to her assistance and ss. *Salvage King*, then nearing Victoria with *Gradac* in tow, handed her tow over to another tug and proceeded to Albert Head. After extensive operations were successful in floating the vessel.

November 1.—SS. *Sutorpco* ashore at Albert head. SS. *Salvage King* proceeded to her assistance and floated the vessel after a few hours.

November 16 to December 6.—SS. *Depere* badly ashore at port McArthur (near Ketchikan) and in need of assistance. SS. *Salvage King* left port immediately and after extensive operations floated the vessel and convoyed her safely to Tacoma, Wash.

December 17.—SS. *Skagway* reported in trouble off Tatoosh island. SS. *Salvage King* proceeded to the scene, but found the vessel badly burned and a total loss.

# RETURNS OF SHIPPING MASTERS FOR THE YEAR ENDING DECEMBER 31, 1929

NOTE.—The Collector of Customs acts as shipping master where no shipping master is appointed.

## SOREL SHIPYARD

## REPORT OF FRED BRYDGES, M. INST. N.A., M.E.I.C., SUPERINTENDENT

The operations of the Sorel Shipyards during the fiscal year ending March 31, 1930, consisted principally in maintaining the fleet of the St. Lawrence Ship Channel Branch in good order, carrying out the necessary repairs and the building of new constructions.

Work was also done for the Dominion Steamers, the Maintenance of Lights Branch, the Maintenance of Buoys Branch, and the Signal Service.

The repairs during the winter were very heavy and the operating repairs also increased due to the heavy work and the hard material which was being dredged.

## NEW CONSTRUCTIONS

Construction No. 95, the new *Frontenac*, all the work was completed except the trial trip.

Work progressed on constructions Nos. 98 and 99, two new dredges of the following dimensions: 192 feet by 40 feet by 14 feet, and both vessels were launched on June 29 and November 13, 1929, respectively.

Work was commenced on two new 250-yard dumping scows, constructions Nos. 100 and 101, but practically nothing was done during the winter owing to the large amount of repairs required on the fleet, which took the time of nearly all the men.

The new boilers, which had been built in the preceding year, were installed on dredge No. 3.

The following are some of the outstanding repairs made on the various vessels:—

## DOMINION STEAMERS

The *Verchères* was hauled up; certain repairs were made to the *Safeguarder*, the *Emilia* and the *Lady Grey*, and the *Argenteuil* was hauled up for repairs to her rudder.

## FLEET VESSELS

The tug *Varennnes* was hauled up twice: first time for repairs to the stern, and the second time for inspection of her tail shafts.

The *Acetylene* was hauled up and her hull caulked and sundry repairs made.

The *Lavaltrie* was hauled up for inspection of shafts and repairs to her rudder.

The *Lanoraie* was converted from jet condensing to surface condensing with considerable increase in speed and saving in coal.

The *Lac St. Pierre* was hauled up for caulking the hull.

*Iberville*.—A considerable amount of repairs were made to the boiler, but the winter repairs were not completed owing to the vessel not being required for the next season.

The *Contrecoeur* was hauled up for repairs to her rudder and examination of her tail shafts, and also some caulking to her hull.

The *Laviolette* was hauled up for the winter and very considerable repairs were made. A large part of her plating forward was renewed, also some frames and an extra plate was built forward just above the water line.

The *James-Howden*: the boiler was removed, the vessel hauled up, put onto blocks and the hull opened up for inspection with a view to reconstructing, but it was found and decided that the cost of reconstruction would not be justified owing to the age and condition of the vessel.

No winter repairs were made on the *Carmelia* owing to it being recommended that the vessel be put out of commission and disposed of. The cost of repairs would have come to a large amount, which was considered not worth while spending as the vessel was unsuited for the fleet requirements, there being accommodation only for a single crew.

The *Berthier* was hauled up, shafts examined and the under portion of the vessel painted.

Sundry repairs were made to the *Bellechasse*.

A small Turbo generator was installed on *Coal Barge No. 7* for lighting the crane, and the vessel was hauled up for inspection of propellers.

*Coal Barge No. 5*.—A new boiler was fitted in this vessel, also a larger steering gear.

*Hopper Barge No. 4* was hauled up for repairs to her dumping doors. Extensive alterations were also made to this vessel including repairs to the forecastle and accommodation being provided for a day and night crew.

Artificial refrigeration by steam-driven units was installed on dredges Nos. 8, 14 and 15, Hopper barges Nos. 1, 3 and 4, and the tugs *Deschailions* and *Bécancour*.

Electric lighting units were also installed on the tugs *Bécancour*, *Deschailions*, *Contrecoeur* and *Varennnes*.

*Stone Lifter No. 4* was reconditioned for services of stone lifter after having been out of commission for some considerable time. Certain spare parts were made for the Public Works Department dredge No. 1 at St. John, N.B.

Considerable changes were made to winch arrangements on the *Sounding Scow* to enable the sounding bar to be handled more expeditiously and accurately.

A contract was awarded to Sin-Mac Salvage Limited to raise dredge No. 1 which capsized at wharf No. 3; the vessel was turned upright during the winter ready for lifting immediately after navigation opened in 1930.

*Wharf No. 4*.—A contract was awarded to Messrs. Cummins & Robinson for the reconstruction of a concrete wharf in place of the wood crib work. Owing to the lateness of the season, the contractors were only able to deliver a certain quantity of the material and a considerable part of the old wharf was removed.

A new temporary shop was placed on wharf No. 4 for the use of the riveters on bucket repairs.

The Shipyard buildings and wharves were kept in good condition, and necessary repairs were made to the hauling ways.

The force employed at the Shipyard during the fiscal year 1929-30 varied from a minimum of 753 at April 2, 1929 and a maximum of 895 at March 24, 1930, with an average for the year of 819.

The total amount expended for Shipyard operations during the fiscal year 1929-30 was \$3,007,121.13.

## CANADIAN HYDROGRAPHIC SERVICE

### REPORT OF CAPTAIN F. ANDERSON, M.E.I.C., HYDROGRAPHER

The steadily increasing pressure of demands for charting of new areas was in part met by the reconditioning of the C.G.S. *Bayfield*, the smallest and oldest steamer of the survey fleet, built in 1889, and acquired by the Hydrographic Service in 1904. Charting operations were carried out on the Atlantic and inland waters district with three steamers and two launch parties; on the Pacific coast, employing one steamer and a shore party.

Since the 1st of April, 1928, the field staff in the Division of Hydrography has been increased from time to time, as qualified applicants became available, by the entry of twelve junior assistants, graduates of Canadian universities, also three juniors added to other divisions of the service—Chart Construction, Precise Water Levels, and Engraving—and two clerical assistants added to the headquarters' staff. Unfortunately, of this number, six of the qualified technical appointees have since resigned in one district—Atlantic coast and Inland waters—to take up more remunerative occupations elsewhere. The benefit of one or two seasons' training has thus been lost to this service, though the filling, during the past year, of four vacancies has aided somewhat in carrying on the various surveys with gratifying results. Efforts are being made to induce young graduates to enter this important branch of the federal service, and it is hoped that greater success may be attained through an upward revision of salaries.

Although it has long been felt that each hydrographic steamer should be staffed with a full complement of assistant engineers, in order to insure the maximum returns in the form of areas surveyed, and new charts produced, for the capital and operating expenditures involved, there has never been a time in the history of this particular service when this condition has been attained. However, this year further efforts are being made to obtain the necessary junior assistants in order that new surveys on which, as yet, no work could be attempted because of lack of trained personnel, may be taken in hand.

The hope for addition to the staff will, in due time, permit the release of fully qualified engineers of long service from ship surveys, to take charge of new minor surveys in other territories.

When opportunity arises, the ships are being equipped with the latest approved devices for hydrographical and oceanographical research. These comprise sonic-sounding apparatus, gyroscopic or mechanical compasses, and equipment for attaining deep sea water samples and temperatures. This service has been content to await the results of experimental work conducted by the Hydrographic Services of other countries and then select the types of apparatus found to be best adapted for work in Canadian waters, and the value of this policy is now being demonstrated in the results obtained from the instruments that have finally been selected.

The hydrographic service consists of the following main divisions:—

#### HYDROGRAPHY

##### *Atlantic and Inland Waters District*

1. Hudson bay and strait—C.G.S. *Acadia*, under the command of Mr. J. U. Beauchemin.
2. Gulf of St. Lawrence, north shore—C.G.S. *Cartier*, under the command of Mr. G. A. Bachand.
3. Magdalen islands—C.G.S. *Bayfield*, under the command of Mr. H. L. Leadman.
4. Lake Winnipeg—Motor-launch party, under the command of Mr. Edouard Ghysens.
5. Great Slave lake—Motor-launch party, under the command of Mr. F. C. G. Smith.

##### *Pacific District*

6. Pacific coast—C.G.S. *Lillooet*, under the command of Mr. H. D. Parizeau.
7. Minor surveys—Houseboat *Somass*, in charge of Commander J. H. Knight, R.N., under the direction of Mr. H. D. Parizeau.

#### TIDES AND CURRENTS

Atlantic coast district—Under Mr. H. W. Jones.

Pacific coast district—Under Mr. S. C. Hayden.

#### PRECISE WATER LEVELS

Port Arthur to Quebec—Under Mr. C. A. Price.

#### CHART CONSTRUCTION

Under Mr. G. L. Crichton.

#### CHART DISTRIBUTION

Under Mr. Charles McGreevy.

#### HEADQUARTERS

Under the direction of Mr. R. J. Fraser, Principal Assistant, the following work was carried out: New and special surveys, investigation of problems relating to chart revision, preparing and editing of pilots and sailing directions, and the supervision of instruments and equipment.

With the opening of navigation the bay of Quinte was visited, aids to navigation located, and changes and alterations in that locality that have taken place since the original survey of the bay was made, were incorporated in a new edition of the chart. In the fall the lake ports of Toronto, Oshawa, Whitby, Dalhousie, Hamilton and Port Colborne were investigated for chart revision purposes; at Port Weller, the lake Ontario terminus of the new Welland ship canal, a control survey was made and plans laid to produce a chart of the approaches. At Hamilton and Burlington bay, an inspection of the growth of the harbour-front and facilities resulted in the decision to place a small survey party there in the coming summer to carry out important field work, for the purpose of producing a new edition of the chart of that locality.

Toronto harbour, where extensive improvements have been made, was triangulated and a control obtained for the revision of the chart. Various sections of the new Welland canal were visited to determine the best method for producing a strip chart of that waterway for the information and guidance of canal traffic. Plans were also prepared for the investigation, by an inland waters survey party, of all the lake harbours from the Detroit river down to Kingston, in order that the plans of these ports might be brought up to date next season.

In November and December, at the request of the Department of Public Works, a joint party comprised of hydrographic engineers, Messrs. F. C. G. Smith and W. R. Young of this service, and Public Works engineers, under the direction of Mr. R. J. Fraser, conducted sounding and examination work on several sections of the proposed new ship channel of the upper St. Lawrence, between Brockville and Clayton, N.Y., with the aid of a tug, motor-launch and sweeping equipment, and, despite the wintry weather conditions prevailing, much valuable data were obtained and plans were laid for the commencing of a re-survey of the channels, in the interests of the deep draft traffic, from the upper lakes to the new government grain terminus at Prescott.

During the year a new edition of 1,000 copies of the "St. Lawrence Pilot" below Quebec was completed, printed and placed in circulation at the end of the fiscal year. The area covered by this volume has now been extended to embrace the coasts and waters of Anticosti island, the north shore of the gulf, including the Mingan islands, and the whole of Gaspé bay. The first volume of the first Canadian edition of the "British Columbia Pilot," from Cape Caution to Portland inlet, including Queen Charlotte islands, compiled by the officer in charge of the Pacific district of this service, was taken in hand for editing and proofs have been received from the King's Printer. Work was also commenced upon an edition of "Sailing Directions" for Hudson bay and strait, a publication much in demand, which it is hoped may be issued during the coming summer.

It is desired to again point out here that in order to overtake this important section of the work, the issue of complete sailing directions and pilots of Canadian coasts and waters, the need is still greatly felt for the addition to the publication staff of both a senior and junior hydrographic engineer, with an intimate knowledge of charting requirements, and this may be attained only through the release of experienced men from their field duties by the training of new entrants.

In the Instruments Section much additional equipment has been added to enable the increasing number of parties to carry out their charting operations with greater efficiency. The practice of fitting-out the field staffs with a uniform and standard type of instruments, theodolites, sextants, etc., in order that these may be all of one stock pattern and thus interchangeable as necessary, has been continued.

#### DIVISION OF HYDROGRAPHY

##### *Atlantic coast and Inland Waters District*

##### HUDSON BAY AND STRAIT

To carry out charting and oceanographical research in this region the C.G.S. *Acadia* fitted-out, provisioned for six months, at Halifax, N.S., and sailed on July 15th with the following ship's company on board:—

Mr. J. U. Beauchemin.....	In command.
Capt. F. V. Ryan.....	Sailing master and pilot.
Mr. M. A. MacKinnon.....	Senior hydrographic engineer.
Mr. K. V. Kierstead.....	Junior hydrographic engineer.
Mr. T. M. Tardif.....	Junior hydrographic engineer.
Mr. J. A. Deveau.....	Junior hydrographic engineer.
Mr. Daniel Fraser.....	First Officer.
W. E. Fultz, M.D.....	Physician and surgeon.
Mr. J. S. Cann.....	Chief engineer.
Mr. N. A. McLeod.....	Second engineer.
Mr. Willie Racine.....	Second officer and mate.
Mr. J. A. MacDonald.....	Third engineer.
Mr. R. F. Austin.....	Wireless operator.

and the usual complement of quartermasters, seamen, firemen and stewards. Three wireless operators to be landed at Nottingham island, and Mr. F. W. Phillips who joined the ship at North Sydney as passenger to Churchill, were also carried, making a total of 52 persons on board.

Halifax being cleared, a course was steered to a point about 55 miles south-west of Sable island, reached on July 16. A full day was spent on checking the echo-sounding gear in depths varying from 85 to 500 fathoms and later, while proceeding along the eastern coast of Nova Scotia, contour lines and shallow spots were easily located. Experiments were also successfully carried out in using this device as a submarine sentry. Off Canso the ship was swung for the obtaining of the compass error, using well defined marks on shore and the true north as given by the gyro compass, which proved to be an exceptionally good and expeditious method of swinging the ship at sea when either landmark or celestial bodies are visible. Two days were spent at North Sydney in bunkering the ship, in addition to which 75 tons of sacked coal were carried on deck.

Sydney Harbour was departed from on July 20 and Belle Isle strait passed through on July 24, where numerous icebergs of various sizes were seen, and all along the Labrador coast several large icebergs and growlers were met. The track followed was about 20 miles off the coast, and, owing to fog and rain, slow speed was maintained, due to the presence of icebergs and growlers.

The first field ice was encountered about 60 miles southeast from cape Chidley, and Port Burwell was reached on the morning of July 28. At Port Burwell the following ships were anchored: ss. *Nascopie*, ss. *Ungava*, and the C.G.S. *Sambro*, all having arrived on the previous day. At this port a suitable place was selected for the site of an automatic tide-gauge at the bottom of the bay, just opposite the Hudson's Bay Company's post, where a crib could be easily built and the gauge attended to by one of the company's employees.

Wireless operator Axcell, of Port Burwell, was taken on board and placed under the care of the ship's medical officer; three stranded aviators of the ill-fated plane "Untin Bowler," which was lost at Port Burwell two weeks previously, while on an attempted flight from Chicago to Berlin, were also accommodated on board and landed later at Churchill, where transportation was arranged for their return to civilization.

Owing to the dragging of the ship's anchor during a strong southerly wind, it was found advisable to move three miles south of the harbour. This weather continued for three days and on the morning of July 31, the anchorage was cleared and a course shaped for cape Hopes Advance, where the ship arrived in the evening. During the passage, field ice was encountered 50 miles west northwest of Port Burwell, and numerous large and small icebergs and growlers noted off cape Hopes Advance.

On August 1 the direction finding station in this locality was calibrated and Nottingham island was reached on August 3. Three wireless operators, due for this place, were landed, and the calibration of the direction finding station being carried out, a course was shaped for Churchill. No ice was encountered crossing Hudson bay until about 100 miles north of Churchill, and the same distance off the west coast, where a delay of two days was caused.

On August 8, with westerly winds, a clear passage was found between the ice pack and the west coast, and Churchill was reached on the following day. Surveying operations were immediately taken in hand and continued until October 15. During the course of the survey, the direction finding station at Churchill was calibrated and assistance was given to an officer of the Geodetic Service of Canada in establishing a beacon on Hubbard point. An investigation was also carried out to determine the salinity of the water in Churchill harbour at different depths and stages of the tide. Assistance was also given to the McAlpine party in an endeavour to save one of their planes, found adrift eight miles off Churchill.

The assistance rendered by the Resident Engineer, Department of Railways and Canals, in supplying the necessary tugs and scows for the coaling of ship, as well as his general co-operation in many ways, were greatly appreciated.

Before clearing Churchill harbour, operator Hawks was taken on board to be landed at Nottingham island.

On the passage across Hudson bay and through Hudson strait, several oceanographical stations were observed. Nottingham island was reached on October 17, operator Hawks was landed that day and operator Daziel was taken on board and placed under the care of the ship's medical officer.

Five days were spent at Erik cove due to inclement weather. On October 24, the *Acadia* passed through the channel inside Digges islands to form a general idea of the locality. However, owing to the strong currents and many rocks showing in the locality it would require a careful survey before it could be recommended for general navigation. Thence the course followed passed about two miles off the south shore as far as Sugluk, which was reached the same evening. On the following day the harbour was cleared, Charles island reached at noon, and a sector of Nottingham direction finding station recalibrated, and Wakeham bay arrived at on October 26.

Having carried out a sketch survey of this bay, including the approaches from Wales island, the harbour was cleared and Acadia cove reached on October 30, where a strong southwest wind delayed the ship for two days. Owing to shortage of coal and water the calibration of Resolution island direction finding station was abandoned, and the *Acadia* proceeded south on November 1, passing several icebergs off the entrance to Hudson strait. Belle Isle was reached on November 4 and North Sydney on November 6, where coal and fresh water was taken on and Halifax arrived at on November 8.

#### SEASON'S OPERATIONS

The work carried out during the open season of 1929 included the charting on a suitable scale of that portion of the Hudson bay coast extending from Churchill harbour some 35 miles to cape Churchill, and northward and westward to Hubbard point; the locating and establishing of principal stations for future surveys farther along this coast to the northward; investigations of channels at the western end of Hudson strait inside Digges islands; and the calibration of the newly established direction finding radio stations at Resolution island, cape Hopes Advance, Nottingham island and Churchill, designed to furnish bearings to vessels navigating this region to the terminal port on the western coast of the bay. In addition, investigations of a practical scientific nature were conducted, such as obtaining samples of sea water at various depths, for the determination of the densities and temperatures in connection with movements of currents and marine biological research, and observations for the determination of more accurate values of the magnetic variation in a region so close to the magnetic pole.

During the season of 1928 a shore party proceeded to Churchill harbour and erected several large triangulation stations and secondary stations along the coast to cape Churchill, also sketching in the shore-line between.

Last season, 1929, additional stations had to be built for the purpose of carrying out the boat sounding. The erection and whitewashing of these stations proved very slow work, owing to the nature of the coast. Boat sounding had to be done during exceptionally clear weather, especially between Halfway beacon and Fox island, where the lines extend some eight miles offshore, and about two cables apart. All the shoals were carefully examined and the ship sounding extended out about eighteen miles offshore, which will prove very useful to ships approaching the coast.

Two main stations were established north of Churchill; one at North river and another at Hubbard point, the latter one consisting of a conspicuous beacon 55 feet high, erected on the only elevation on that part of the coast, and will prove very useful, not only for the survey, but also for mariners.

Astronomical observations were carried out by the Geodetic Service of Canada at Churchill, cape Churchill and Hubbard point, and the triangulation duly connected with the points thus established. All the permanent wharves, beacons, lights and houses, at Churchill, were located on the chart and the approach to Churchill harbour sounded to a scale of 6 inches to 1 mile.

The following work was performed:—

Area sounded over.....	square miles	540
Boat soundings .....	linear miles	633
Ship sounding .....	linear miles	613
Coastline.....	linear miles	10
Shoals examined .....		26
Days in Hudson bay.....		66
Days lost through bad weather.....		26
Days lost through coaling.....		6
Working days .....		34

As a result of the above, the following two charts will be issued:—

“Cape Churchill to Churchill Harbour,” on a scale of 1 inch to a nautical mile.

“Churchill Harbour,” on a scale of 6 inches to a nautical mile.

The *Acadia* was equipped with the latest devices for obtaining the various forms of valuable data necessary in connection with the practical study of both hydrography and oceanography. In addition to the standard equipment for taking soundings or depth measurements in both shallow and deep waters with which all hydrographic vessels are ordinarily supplied, this ship was fitted with the latest type of sonic-sounding device, the British Admiralty pattern Echo-Sounder. With a range of from 10 to 800 fathoms, this instrument permitted the taking of soundings at all speeds and under all conditions of weather, and greatly assisted in the conduct of the charting features of the work. It was the first of its type to be installed on a Canadian hydrographic vessel and throughout the cruise soundings were taken in depths varying from 10 to 500 fathoms, and in proceeding over thoroughly charted ground off the Nova Scotia coast, where reliable confirmations could be obtained on the functioning of the device, it proved itself efficient as a depth measuring machine to a degree of precision of  $98\frac{1}{2}$  per cent.

For magnetic investigation work and to assist in the navigation in a region where the directive force of the ordinary magnetic compass is greatly impaired, the ship was equipped with a Sperry gyro compass, the outstanding property of which is that it always points true north and, being non-magnetic, is not affected by its comparatively close proximity to the magnetic pole. With this instrument, the true bearing is always available for navigation purposes and by comparison with the standard magnetic compass the variation, or declination, was noted frequently on the voyage to and from Churchill, and the values obtained for the variation were found to agree closely with those previously shown on the charts. An area of local magnetic disturbance, noted during previous voyages on the *Minto*, about 100 miles off Churchill and 10 miles in diameter, was again crossed over by the vessel where the magnetic compass was deflected about 180 degrees. A vessel, unless it were equipped with a gyro compass would find itself in an awkward position in overcast or foggy weather in navigating such an area.

In addition to hydrography the object of this expedition was to obtain as much allied information as possible, including physical oceanography or densities and temperatures of the water passed over. Very little is known

about this feature of the water of Hudson bay and the information acquired, used in conjunction with future observations, will be of considerable value with regard to hydrodynamics and fisheries, and deductions from which will assist in simplifying navigation in this region.

To obtain this information the ship was equipped with the latest pattern of Nansen Stopcock reversing deep-sea water bottles of  $1\frac{1}{2}$  litres capacity, each bottle being equipped with two Negretti and Zambra reversing deep-sea thermometers, registering from  $-2^{\circ}$  to  $+25^{\circ}$  Centigrade: each thermometer bearing a certificate from the National Physical Testing Laboratory. Negretti and Zambra hydrometers were used to obtain the densities, the usual practice at  $60^{\circ}$  Fahrenheit being closely followed.

With the above equipment samples and temperatures of sea water were obtained at some 20 stations in Hudson bay and strait at the surface and bottom and the following intermediate depths: 25, 50, 75, 100, 150, etc., metres.

Unfortunately this equipment was not available when the *Acadia* sailed north or until her arrival at Churchill, thus observations were only possible on the homeward trip.

The lowest temperature observed was in the middle of Hudson bay where a temperature of minus  $1.75$  Centigrade was obtained.

Taking  $1.024$  as the coefficient of standard sea water density, it is to be noted that the average density of the water in Hudson bay is 10 per cent greater than that of standard sea water.

At Churchill a special investigation was made in order to determine at what period of each tide it would be possible to obtain fresh water for the steam plants to be erected in connection with the development of this new harbour.

The results obtained show that fresh water is available in Churchill harbour on few occasions and then for only a relatively short period at low water.

In connection with the study of the surface currents in the bay and strait, a number of drift bottles were released on the trip across and through the strait. These bottles contained a record of the origin, date, latitude and longitude of the positions at which they were thrown overboard, and also instruction to whomsoever recovered them to communicate the fact and the details of the time and locality to the proper authorities. In this manner the course followed by a bottle may be determined and by so doing some additional knowledge respecting the direction of the current is gained.

#### GENERAL HEALTH

The general health of all the personnel was good. Quite a few operations of minor nature were necessary, most of which were performed under local anaesthetic, chloroform being necessary on two occasions.

Many of the crew were incapacitated through defective and abscessed teeth and others through the entrance of foreign substances into their eyes, such as steel particles, which were of the nature of emergencies.

Seven persons not of the ship's company were treated; two of this number were radio operators treated on board. Operator Axcell from Port Burwell was crippled by "arthritis" of two months' duration, his right knee being in such a condition as to render him unable to walk. He was transported to Churchill and sent by plane to Le Pas and thence to Winnipeg. His physical condition improved considerably during his stay on board.

Operator Deziel of Nottingham island also needed immediate treatment; his condition also improved considerably during his transportation to Halifax.

Operator Baxter of Resolution island, suffering from an infected foot, was treated by wireless with good results.

An Indian at Churchill with eye ulcers was treated at the request of Rev. Mr. Gibson, the Anglican missionary.

A sailor from the *Ocean Eagle* was treated in the absence of the local doctor of Churchill.

An Eskimo family was given medicine at Erik cove, and on arrival at Wakeham bay an Eskimo woman was found in the last stages of tuberculosis, for whom the ship's medical officer could do but little.

#### ICE CONDITIONS AS NOTED DURING THE SEASON 1929

En route to Hudson bay numerous icebergs were sighted passing through Belle Isle on July 24 and proceeding up the Labrador coast, which received a berth of about 25 miles. Slow speed was maintained with frequent stops owing to the foggy and rainy weather, and the presence of icebergs frequently passed. On July 28 the first field ice was entered in the evening about 60 miles southeast from cape Chidley, which became closely packed at about 18 miles' distance off the cape, preventing further progress. However, on the following morning, the pack having opened up with the ebb tide, a fair passage offered north of the Button islands, and Port Burwell harbour was entered at noon.

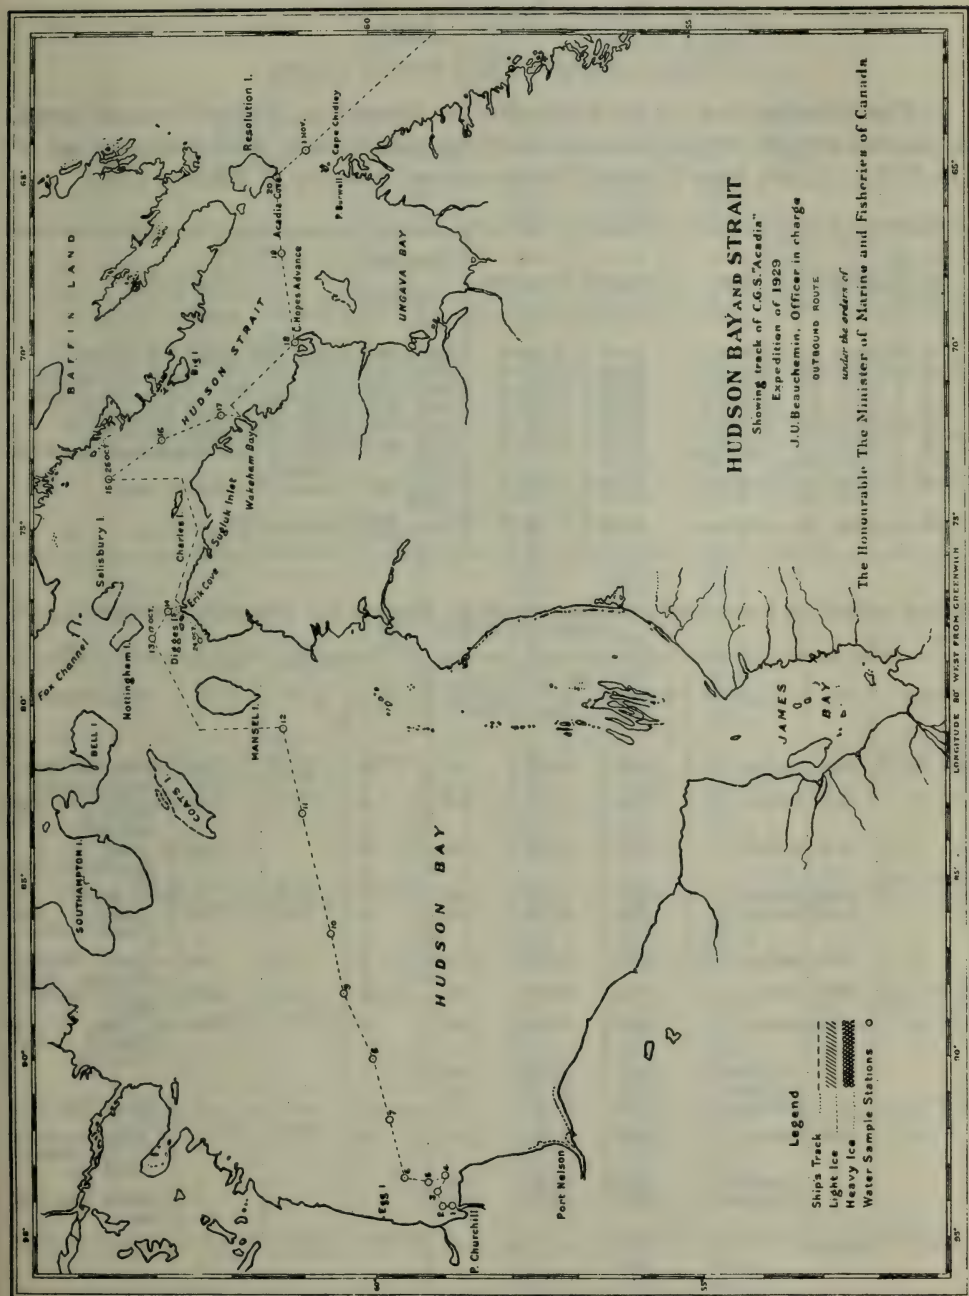

Although field ice was sighted in the strait, no difficulty was entertained making a passage. A sharp lookout was kept owing to the presence of icebergs and growlers, which latter are especially dangerous, being low in the water and difficult to detect. From Mansel island at the west entrance to Hudson strait, a northerly course was steered to avoid the ice fields prevalent in the early summer. Ice fields were entered about 100 miles north of Churchill and the same distance off the west coast, which held the ship for two days. The wind having assumed a westerly direction, a fair passage was discovered about 20 miles off the coast, just inside the ice pack, which carried the ship to Churchill harbour. On the previous day this passage was reported as being very narrow and hardly safe for the ship. Advice received at Churchill stated that the ice fields extending many miles to the southward of the harbour, and with easterly winds, the harbour would be inaccessible owing to the ice being pressed close on shore.

Sea planes operated from the harbour of Churchill could keep approaching ships advised regarding ice conditions.

As appendices to this report, the following are attached:—

- I. Sketch showing the path followed by the C.G.S. *Acadia* during her trip to Churchill and the ice encountered.
- II. Sketch showing the positions of oceanographical stations and the path followed by the C.G.S. *Acadia* during her return from Churchill.
- III. List giving numbers of and the position from which drift bottles were thrown in Hudson bay and strait in the fall of 1929.
- IV. Oceanographical stations observed and results in Hudson bay between Churchill and cape Churchill.
- V. Oceanographical stations and results in Hudson bay and strait.
- VI. Oceanographical observations taken in Churchill harbour at two different locations.
- VII. Meteorological observations taken on board the C.G.S. *Acadia* during the season of 1929, in Hudson bay and strait.

## CANADIAN HYDROGRAPHIC SERVICE

## HUDSON BAY SURVEY, 1929

## OCEANOGRAPHY—DRIFT BOTTLE RECORD

The following is a list of Water Bottles released in Hudson bay and strait in the fall of 1929 by the Canadian Hydrographic Service, during the voyage of the C.G.S. *Acadia* from Churchill to the eastern entrance of Hudson strait.

No.	Date	Time	Latitude	Longitude	Number of bottle	Remarks
1	Oct. 15	3.00 a.m.	59-47	91-45 W.	9898, 9902	Light NW., depth 125 meters.
2	Oct. 15	9.00 a.m.	60-05	90-17 W.	9903, 9901	Moderate NW., depth 153 meters.
3	Oct. 15	21.30 p.m.	60-26	87-22 W.	9907, 9912	Moderate NE., depth 214 meters.
4	Oct. 25	17.45 p.m.	63-34	73-48 W.	9900, 9904	Light NE., depth 234 meters.
5	Oct. 26	1.00 a.m.	63-00	72-45 W.	9911, 9908	Light NE., depth 384 meters.
6	Oct. 30	5.45 a.m.	61-12	67-17 W.	9899, 9914, 9916	Calm, current running east, depth 541 meters.
7	Nov. 1	10.20 a.m.	61-02	64-30 W.	9913, 9897, 9909	Strong SW., current east.
8	Nov. 2	9.30 a.m.	58-30	61-00 W.	9915, 9905	Moderate SW., rain.

## WATER DENSITIES AND TEMPERATURES TAKEN IN HUDSON BAY BETWEEN CHURCHILL AND CAPE CHURCHILL, 1929

									At Halifax.....		Arrived at Halifax at 9.30 a.m.

## GULF OF ST. LAWRENCE, NORTH SHORE

Charting work was commenced this year on that section of the north shore of the gulf of St. Lawrence from Natashquan eastward towards Belle Isle. For this purpose the C.G.S. *Cartier* fitted out at Halifax and sailed from that port on May 16 proceeding directly to Natashquan harbour, which place was used as headquarters for the major part of the season.

This party was in charge of Mr. G. A. Bachand, assisted by Messrs. Norman Wilson, W. F. Elliott, and H. Brewer.

The principal work conducted comprised the extension of a main triangulation, the preliminary operation to charting the islands and offshore waters of this coast. Triangulation work was begun at Ste. Geneviève island and carried eastward from that point to St. Mary island, a distance of 160 miles. This required the erection of 33 main triangulation stations, 6 of these being towers, ranging in height from 30 to 50 feet. In this network 36 stations were occupied and observed.

Sixteen of the main stations were situated from 7 to 10 miles inland. Some of them being located comparatively close to rivers or lakes, were fairly accessible; others necessitated the station building and observing parties crossing over miles of muskeg and swampy land, almost impassable in places. In consequence, in the case of 10 of these points, the return trips to them from the coast and the construction and observing work consumed two days' time for each. In some cases it required four days to complete an operation at a station. For the remainder the work was conducted at each station in a full-length day.

Sixty miles eastward of the initial point a check base was accurately measured and the difference found between the triangulated distance and the measured distance was half a metre in 3,334. Here also observations were taken for azimuth, or true bearing, and the difference found between the triangulated or calculated and the observed bearing, was only four seconds of azimuth.

This main triangulation work was completed about the 1st of September, when headquarters were moved up the coast to Harrington Harbour, and the charting in the neighbourhood of cape Whittle was commenced.

In this second section, covering a stretch of coast of about 35 miles, the party erected 124 shore marks for coast-lining and sounding purposes, and of these 82 were occupied and observed by October 5.

## ST. PETER BAY, CAPE BRETON

On leaving the north shore, the *Cartier* proceeded to St. Peter bay, Cape Breton, where the approaches were sounded and examined. During the course of this latter work, the following was carried out:—

Number of stations built.....	23
Number of stations and points observed.....	24
Number of miles of coastline surveyed.....	nautical miles 23
Number of miles of boat sounding.....	linear miles 126

The numerous shoal spots located and examined here required the services of two boat sounding parties for a period of between three and four days. As a result a new revised plan of St. Peter bay will be prepared and issued, though no great changes were found to exist between the information contained in the Admiralty chart and that obtained by this year's examination.

On the completion of the season's work, the *Cartier* sailed on October 26 to Charlottetown, P.E.I., and was laid up for the winter.

## MAGDALEN ISLANDS SURVEY

To continue the charting of the Magdalen islands, which was commenced some years ago and discontinued through temporary laying-up of a vessel and lack of experienced hydrographic personnel, the C.G.S. *Bayfield*, was refitted at Charlottetown on April 1 and left that port on May 21 for work in various parts of the gulf. The survey was under the charge of Mr. H. L. Leadman, who had as senior assistant, Mr. R. W. Bent and junior assistant, Mr. R. E. Hanson.

In the early part of the season an examination of Jourimain shoal in the vicinity of cape Tormentine was undertaken and completed.

Owing to a defect in the tail shaft it was necessary to dock the *Bayfield* at Pictou, and starting on June 5 and continuing during the period the ship was under repairs, a survey of Pictou harbour was proceeded with. The area from the seaward side of the entrance bar to well above and outside was sounded, the shoreline of the harbour proper traversed and a complete triangulation scheme carried out.

On June 28 the survey of the Magdalen islands was commenced and continued until September 27. During that period an area of about 400 square miles northeast of Entry island and extending to the Bird rocks and Brion island was sounded. Nine uncharted shoal patches were discovered, and, as over this area the depths seldom exceed 20 fathoms and there are numerous rock outcrops, considerable time was spent on close and careful sounding.

With the breaking of the fall weather, the *Bayfield* proceeded to the more sheltered waters on the New Brunswick coast and, from October 1 to 9, a triangulation of Richibucto river was made, the entrance thereto sounded, and other related work carried out for the purpose of preparing a chart of that locality. On October 10, the ship proceeded to Shippigan and commenced the long contemplated and necessary resurvey of Shippigan, Caraquet and Miscou harbours and channels. In this locality a triangulation was completed, aids to navigation were located, and in the west entrance to Caraquet harbour, a tentative range was established and a channel examined for a navigable depth of 9 feet.

Enroute from Shippigan to Charlottetown, new aids to navigation at Pinette river and Orwell bay were located and the vessel then laid up for the winter on November 2.

The summarized result of the season's work is as follows:—

Number of miles of ship sounding.....	linear miles	1,230
Number of miles of boat sounding.....	linear miles	313
Number of miles of shoreline survey.....	linear miles	54
Number of survey stations and sounding marks erected.....		129
Number of days lost through bad weather.....		24

As a result of part of this season's work, two new charts were prepared for the engravers and will be ready for issue to the public within the coming year, viz., "Richibucto River" and "Pictou Harbour", on scales of 2,300 feet and 2,000 feet to the inch, respectively.

## LAKE WINNIPEG SURVEY

The inland waters survey party operating for the past two years on lake St. Clair having completed the work in that section, and representations having been made by a number of navigation interests regarding the necessity for further charting of lake Winnipeg, this party was transferred in the spring to the latter locality and conducted sounding and charting operations in the channel and approaches to Playgreen lake at the head of lake Winnipeg. The work was in charge of Mr. Edouard Ghysens, assisted by Mr. J. L. Foreman, operating with a local motor launch and party.

Owing to ice conditions on the lake, the survey party did not reach Warrens landing until June 12, when work was commenced immediately. It was found that the water in the channel leading to Playgreen lake, which is the head of the Nelson river, was very shallow and obstructed by numerous boulders and submerged reefs, offering a serious problem to ships in making Warrens landing in daytime and practically impossible after dark. Owing to extra severe weather conditions, surveying operations were brought to a close on September 13.

The result of the season's work will be the issuing to the public of a chart of Playgreen lake, from lake Winnipeg to Goose island, on a scale of 2,000 feet to one inch. Further, as a result of the examinations and sounding conducted here, it is reported that the intricate channel now followed by the local vessels is about the only one that can be safely navigated, except in one or two instances, though it is not considered advisable to make any changes in the accustomed route which is well known to the local pilots.

In the approaches to Playgreen lake some improvements in the channel might be made through the removal of certain patches of rocks lying on the line of the present range lights.

Summarized, the work performed is as follows:—

Number of miles of shoreline surveyed.....	linear miles	60
Number of miles sounded.....	linear miles	262
Area charted .....	square miles	33
Number of rocks and reefs located and examined.....		520
Survey stations and marks triangulated.....		56

#### GREAT SLAVE LAKE SURVEY

The charting operations on Great Slave lake in the Northwest Territories, which were commenced in the summer of 1928, were continued during the past season.

Mr. F. C. G. Smith was the officer in charge and had with him as junior assistant, Mr. W. R. Young and a party of five seamen. The work was conducted from the auxiliary schooner *Pilot No.1*. This craft was fitted out at Fort Smith, which place was left on June 19 and the mouth of the Slave river arrived at two days later. Headquarters were made at Fort Resolution and at Hay river, and the survey was extended between these two points along the south shore of the lake, a distance of 65 miles. The triangulation system was carried out, astronomical observation stations were occupied at two points, the coastline was resurveyed where found necessary and soundings carried out into the lake to the limit of visibility.

As a result several shoals dangerous to navigation were located and sufficient information obtained for the making of a comprehensive nautical chart of the district covered. In addition large scale plans, urgently required for the use of the shallow draft river steamers and smaller craft operating on the lake between Slave and Mackenzie rivers, were made at Dawson Landing, Ile du Mort, Presqu'île cove, Sulphur cove, Breynat bight, Buffalo river and Hay river.

Systematic water level records were obtained at Resolution for charting purposes and also for the study of lake level fluctuations.

As a result of the survey and study of the local traffic conditions, a recommendation was submitted respecting aids to navigation.

On the close of navigation the schooner was laid up at Fort Smith and the party returned to Ottawa.

During the season 965 linear miles of soundings were taken in the lake.

## PACIFIC COAST DISTRICT

This district is under the command of Mr. H. D. Parizeau, assisted by Commander J. H. Knight, R.N. (retired), Messrs. R. L. Davies, W. K. Willis, R. H. Ettershank, and two new junior assistants, Messrs. Alan Stewardson and Robert Young, both graduates of the University of British Columbia.

The C.G.S. *Lillooet* and the houseboat *Somass* were commissioned on April 15, the former paid off on November 8, and the latter on November 1.

The C.G.S. *Lillooet* was employed in a great variety of surveys and investigations of rocks and shoals. A great deal of time was lost due to local forest fires.

During the season the houseboat *Somass* was employed in the resurvey of Victoria harbour; the sounding, coastlining and topography of the upper end of Burrard inlet, from the Second Narrows to Port Moody, including the southern portion of Indian Arm: the latter part of the season being employed in the coastlining and sounding of the Fraser river, from Woodward Landing to Pitt river. During the season 295 miles of boat sounding and 50 miles of coastlining were completed. A great deal of lost time was experienced through forest fires and city smoke.

The following surveys were undertaken and completed: approaches to Vancouver harbour; marking and observing of Burrard inlet above the Second Narrows; marking and observing of the Fraser river from the Sand heads to Pitt river, also the outside soundings off the Sand heads; Higgins passage between Price and Swindle islands; St. John harbour; approaches to Esperanza inlet; Shelter arm, Clayoquot sound; banks off Jordan river, and the eastern channel of Barkley sound and Swartz bay.

The sweeping operations were: Victoria harbour; Oak bay; Howe sound; Fraser point (near Ladysmith); Surge Narrows; Fisher channels; Higgins passage; St. John harbour; Esperanza inlet; Queen cove; Shelter arm; banks off Jordan river; eastern channel; outside Barkley sound, including the rocks struck by the ss. *Seapool*.

Special investigations of the arc of visibility of the Discovery island light and the silent zone of Rack rocks were carried out.

During the season 135 miles of ship sounding, 491 miles of boat sounding and 116 miles of coastlining were completed. All the above operations were carried out on a large scale.

The following fair sheets were completed and forwarded to headquarters: Laredo sound and approaches; Milbanke sound and approaches, passages east of Milbanke sound; Vancouver harbour, No. 2 and 3 sheets; Fraser river (four sheets).

The following white prints were prepared and issued to the public: channels east of Milbanke sound; Milbanke sound; Laredo sound and approaches; Esperanza inlet; Swartz bay; Shelter arm; Trevor channel (east channel Barkley sound) and Sooke inlet; Fraser river, four sheets.

## DIVISION OF TIDES AND CURRENTS

*Staff*

The permanent staff of this division consists of five: four on the Atlantic at headquarters and one on the Pacific, i.e.:—

*Atlantic Coast District* in charge of Mr. H. W. Jones, who also supervises the work at headquarters, assisted by Mr. R. B. Lee and two stenographers.

*Pacific Coast District* in charge of Mr. S. C. Hayden and temporary assistants as required.

In addition to the above there are six tidal observers on each coast, and during the season current and tidal observers may be employed as required.

The work of this division is familiar to the shipping industry and all our maritime population principally through the annual publication of the tide tables for both the Atlantic and Pacific coasts. For the improvement of these and for other practical and scientific reasons, twelve principal tidal stations are maintained in continuous operation in our principal harbours,—or in isolated situations for regional purposes. Seasonal gauges are set up in localities where additional data is required, and further investigations of tides and currents are made during the summer months. The data obtained is reduced and incorporated in the tide tables and other publications. The tidal stations are as follows:—

<i>Atlantic Coast</i>	<i>Pacific Coast</i>
Quebec, Que.	Vancouver.
Father Point, Rimouski Co., Que.	Caulfields.
Point Peter, Gaspé Co., Que.	Victoria.
Charlottetown, P.E.I.	Esquimalt.
Saint John, N.B.	Clayoquot.
Halifax, N.S.	Prince Rupert
Fort Churchill (not yet operated through the winter).	

The records from these have been carefully checked and prepared for tabulation. Inspection was made and repairs attended to as usual.

#### SEASONAL TIDE GAUGES

##### *Atlantic Coast*

It is thought advisable to establish beyond dispute the height that the tide may attain normally at points in the upper reaches of the bay of Fundy because of the possible effects of the proposed tidal power development near the mouth in Passamaquoddy bay. This bay would be almost wholly cut off from tidal action, which would be equivalent to an alteration in the configuration of the bay of Fundy with possible consequence to the dyked lands around the head through the agency of the tides. There are perhaps four hundred miles of dykes that might be affected. Information that may be used in future to support or refute claims requires a basis of several seasons of records to obtain the natural variations in the tide, and seasonal gauges were erected and operated through the summer for the second season at the following points: in Nova Scotia, near the head of the tide in the Salmon river below Truro; in New Brunswick, in the Memramcook river above College bridge, in the Petitcodiac river below Salisbury, and at Moncton.

Besides the bay of Fundy gauges, and the one at Churchill, Hudson bay, operated by arrangement with the Department of Railways and Canals, seasonal gauges were erected at St. Francois, Orleans island, and at cap au Corbeau in the St. Lawrence. The former, besides affording additional data for the tide tables gave assistance to the dredging operations of the Ship Channel Branch, and afforded the means of transferring water levels from Grosse isle in order to make a consistent determination of datum. The gauge at cap au Corbeau was for the purpose of a time determination of the tide.

The comparison of water levels between Grosse isle and St. Francois was very carefully reduced and shows that the datum for dredging in this channel should be approximately eight feet below true mean sea level to be consistent with the datum planes of the other dredged channels. The datum to which they are at present dredging is only 7.4 feet below M.S.L. The result of this work is available to the Superintendent of the Ship Channel Branch.

## INVESTIGATION OF CURRENTS

*Atlantic Coast*

The automatic recorder for obtaining the turn of the tidal streams day and night was again operated in the entrance to the Great Bras d'Or lake to obtain additional data with which to improve the basis of predictions. Tables were made for the past season and published in leaflet form, and will be sent out similarly for 1930, but they will be incorporated in the tide tables for 1931.

By co-operation with the St. Lawrence Ship Channel Branch, the time of the turn of the tidal streams on the St. Lawrence river on the north channel route near the lower end of Orleans channel and also in Coudres channel was obtained. Capt. Haufman of Dredge No. 16 and Capt. Beaudreault of the Coudres island lightship carried out these observations satisfactorily.

*Pacific Coast*

Observations of the turn of the current at Race rocks by the lightkeeper there were continued throughout the summer of 1929 and are now considered completed. The time of the turn of the tidal streams is relative to the turn as predicted for Turn point, Boundary pass, in the tide tables. A "Notice to Mariners" was issued giving this information for 1930 but afterwards the data will be published in the "Tide Tables."

The turn of the tidal streams off cape Scott at the northern extremity of Vancouver island, is of importance to fishermen in that region, and data was obtained for future information in the "Tide Tables." Similar work was carried out in Princess Louise inlet on the mainland.

## REPORTS ON CURRENTS

Reports on tidal currents for assistance to shipping as enumerated below are available on request except the latter two, which are temporarily out of stock:—

"The currents in the gulf of St. Lawrence."

"The currents in the entrance to the St. Lawrence."

"Tables of currents in the bay of Fundy."

"The currents in Belle Isle strait."

"The currents of the southeast coast of Newfoundland."

## TIDE TABLES

The annual tide tables were calculated and printed as usual. The 1930 distribution, except a reserve held for later demands, was sent out before the beginning of the year and numbered 90,000 copies of the different editions combined.

The large editions, besides being complete for Canadian ports, contain tables for four adjacent United States ports; Boston and New York are included in the eastern book, and Seattle and Port Townsend in the Pacific publication. It is intended that the complete editions shall serve the larger shipping, while the less costly abridged editions are to fill the needs for distinct localities where the complete editions are unnecessary; these small books are more convenient for fishermen and shore people generally.

A new abridged edition for Halifax, Sydney, and Atlantic coast of Nova Scotia including current tables for the strait of Canso will appear for the first time with the 1931 issue.

*Atlantic Tide Tables—*

Eastern coasts of Canada (unabridged).  
Quebec and Father Point (abridged).  
Saint John and Bay of Fundy (abridged).  
Charlottetown, etc., and Strait of Canso current tables (abridged).  
Halifax, Sydney and Strait of Canso current tables (abridged).  
Fort Churchill, Nelson and Hudson Bay (leaflet).

*Pacific Tide Tables—*

Pacific Coast of Canada (unabridged).  
Vancouver and Sand Heads (abridged).  
Prince Rupert and Northern British Columbia (abridged).

## INFORMATION SERVICE AND OTHER AVAILABLE PUBLICATIONS

Information on tidal matters has been furnished in answer to frequent requests from engineers in the Government service and in private practice as well as to others interested. In addition to the "Tide Tables" and "Current Reports" there are other publications which are mailed when written for; these are:—

"Tide levels and datum planes in Eastern Canada."  
"Tide levels and datum planes on the Pacific Coast."  
"Tides at the head of the bay of Fundy."  
"Tides and tidal streams."  
"Temperatures and densities Canadian (Atlantic) waters."

## SPECIAL REPORTS

A report entitled "A consideration of the proposal to place dams in the St. Lawrence river above Quebec to increase depth in the St. Lawrence ship channel with reference to the tidal aspects" was prepared by Mr. H. W. Jones.

## PRECISE WATER LEVELS

As in past years, this division has been continuously employed on the investigation of the vertical movements and fluctuations of the water surfaces of the Great Lakes and St. Lawrence river. One more automatic gauge was operated this past year, making a total now maintained of 45 precise gauging stations. The work of this division, under the direction of Mr. Charles A. Price, assisted by Messrs. William J. Miller, A. S. Matthewman, H. P. Williams and A. G. Tuttle, was conducted with its usual high standard of efficiency and precision.

Of the 45 gauging stations maintained, 20 are located on the Great Lakes, from Port Arthur to Kingston, and the remaining 25 on the St. Lawrence river, from Prescott to Neuville, above Quebec. Of these, 35 were operated continuously throughout the twelve months of the year. Of the others, the Port Arthur station was maintained only until the end of September, when it was re-established in a new installation, a decided improvement over the old site. At Gros cap, near the lower end of lake Superior, the station was maintained during the summer season only, and as the old cribwork on which this station was supported was demolished by several severe storms, operations at this particular point cannot for the present be economically conducted. However, as the neces-

sary data required for some time has now been obtained here, it is not intended to re-establish this station until several years have elapsed, when it will be advisable to again pick up the relation to other locations for the purpose of continuing the study of the tilting of the Great Lakes basin.

At Goderich it is proposed to re-establish the present station on a more permanent site. At LaSalle the high water of the past year undermined the substructure and it will be necessary to relocate this station at a more suitable site in the same locality,

At Port Stanley some temporary repairs were made necessary during the early winter to overcome the misalignments caused by a vessel striking the pier on which the gauging station rests.

Port Dalhousie station was maintained as in 1928, during the open-water season only. As this station is below the standard required for precise observations, it will have to be completely reconstructed if it is to be maintained beyond the present year.

The newly established station this past season was that at Port Weller, at the lake Ontario entrance to the new ship canal, where a specially constructed site and well was provided for in the harbour construction. It has been in continuous operation since the beginning of August, 1929. It is worthy of note, in connection with the determination of a datum for elevations at this new station, that this was obtained and computed entirely by precise water level transfers across the lake from the other hydrographic service gauging stations on lake Ontario, and it has been found that the results of such transfers are exceptionally consistent and without doubt are far superior to any elevations which could be obtained through precise levelling on the land, over the long distances involved.

It is also of interest to note that, during some test operations of the new lock of the Welland ship canal at this point, made by the canal engineers, considerable seiches, or abnormal water fluctuations, were recorded by the gauge, and the results of these were brought to the notice of the chief engineer of the canal construction. As these seiches are apparently peculiar to this harbour enclosure only, and may have some effect on the berthing of vessels in the entrance to the canal, it is proposed to make a close study of their cause, during the early part of the coming summer.

At Prescott, where the gauge was maintained as in 1928, it is expected to be able to re-locate it on a new site to be provided in the foundation of the grain elevator now under construction.

At Cornwall, on January 31, 1929, an abnormal ice movement effected the foundation on which this gauge was installed and special staff gauges were set and maintained until about the middle of April, when the automatic gauge was again put in operation.

At Montreal, in the improvements being made to the King Edward pier, there is included provision for a new gauging site.

Resulting from observations obtained during the past year are records of 502 months of continuous hydrographs, an increase of 19 over the number secured in 1928, and from these some 778,000 precise deductions have been computed, being an increase of approximately 200,000 over 1928. The requests for general information and special data again exceeded preceding years, and the costs of photostat copying tabulations, except for associated government services, were collected from those requesting such data. Amongst the published data issued at regular periods were the usual monthly bulletins of water levels, the annual bulletin of 1929, water levels, and the annual hydrographs of comparative data for each of the Great Lakes and Montreal harbour. In addition to these there were prepared in the office diagrams showing by provinces the number and net tonnage of vessels on the registry books of the Marine Department for 1929. In precise water

level investigations considerable data were prepared and issued relating to seiche ranges in the upper St. Mary's river, computations regarding the tilting of the Great Lakes basin, comparisons of average water levels during the season of navigation, a synopsis tabulation of monthly mean water levels since 1860, and a statement deduced from the then available data showing the changes which could be expected in water elevations in 1929 over the stages which prevailed in 1928, for the special benefit of associated marine interests operating on the Great Lakes.

The usual close co-operation was again maintained with other engineering services of the Government, the U. S. Lake Survey and the United States Engineers' offices; and the numerous consulting engineers and construction engineers investigating and operating in the districts involved.

Co-operation was also maintained as in the past years with the Precise Levelling Branch of the Geodetic Survey of Canada, to whom valuable assistance is being rendered through the water levelling transfers in further strengthening the precise levelling network system conducted by the Department of the Interior.

Attached are the following tabulations:—

1. Monthly mean water surface elevations of the Great Lakes for the year 1929.
2. Monthly mean water surface elevations of the St. Lawrence river for the year 1929.
3. List of automatic gauges, and their locations, maintained in operation during 1929.

MONTHLY MEAN WATER SURFACE ELEVATIONS OF THE "GREAT LAKES", BY PRECISE WATER LEVEL DIVISION, DURING 1929

NOTE.—"A" denotes a Haskell self-registering graphic gauge; hourly readings, daily means, and monthly means compiled.

"B" denotes a Gurley printing register; half-hourly readings, daily means, and monthly means compiled.

"C" denotes a Haskell self-registering graphic gauge; half-hourly readings, daily means, monthly means, time and elevation of high and low waters compiled.

#### CHART CONSTRUCTION

Under the direction of Mr. G. L. Crichton, the staff in this division of the work were continuously employed in the production of new standard Canadian nautical charts including their preparation and compilation, computation of data in connection therewith, and the revision and correction of older existing editions.

The division comprises chart compilation, drafting, engraving, and filing sections. In the first section the work accomplished during the year exceeded that of past years, and included the complete production of:—

- 40 new editions of engraved charts,
- 4 entirely new and original engraved charts,
- 8 new editions of photo-lithographed charts,
- 2 entirely new and original photo-lithographed charts.

In addition to the foregoing there were prepared for either engraving or photo-lithographing, to be placed in the lithographer's hands early in April, the following:—

- 8 entirely new and original photo-lithographed charts.
- 3 new editions of engraved charts.

All copies of published charts placed in circulation were corrected up to date of issue by hand for such small items as could be properly amended in this manner. The number of different publications thus attended to was 100, an increase of 30 over the past year; the total number of individual copies corrected was 22,000 and the total number of individual hand corrections made was 79,300.

The work of revision and new production includes also preparatory work which has been carried out on four new engraved editions and one revision, and there are also six other older charts awaiting revision which could not yet be taken in hand on account of the pressure of work and the increasing demand for new editions of other publications.

In the copper-plate engraving section of this division the work of the past year carried out by Chief Engraver W. C. Cunningham, with an assisting staff of seven engravers, included the completion of the engraving on copper-plate of 8 new charts, maps and diagrams, 6 other charts in hand, 2 large plate revisions of older editions, and 7,934 smaller revisions to plates of existing charts.

The personnel in the Chart Construction Division, comprises in addition to the Chief of the Division, the assistant in charge, 4 senior and 1 junior map draughtsmen.

In addition to the foregoing work accomplished during the year, the office work has entailed in greater measure than in the past the collecting, filing, sorting and adjusting of related data for chart revisions or compilations, and such technical matter can be efficiently handled only by those qualified to determine the proper data for use in chart construction, and the correct procedure for adoption in obtaining correct results.

The number of such items on file for these purposes has increased during the past year to make a total of 6,912.

#### CHART DISTRIBUTION

The work of this division of the Service, conducted under the direction of Mr. Charles McGreevy, comprises the issue and circulation of the nautical charts, sailing directions and pilots, and the handling of correspondence and requests connected therewith, and also the custody of foreign charts of related hydrographic publications which are received in this office and maintained for reference purposes. Again the demand for the standard Canadian charts has increased over that of the previous year to the extent of approximately 1,400 copies. The total number issued during this past year amounted to 15,736.

The following table shows the number of copies issued in response to requests for each year from 1916 to 1929, inclusive:—

1916	3,651
1917	4,612
1918	5,248
1919	6,567
1920	7,567
1921	7,302
1922	6,937
1923	9,777
1924	8,953
1925	9,836
1926	11,928
1927	11,255
1928	14,360
1929	15,736

123,729

In the Chart Construction Division, many requests for charts could not be dealt with and had to be left in abeyance on account of certain charts having run out of stock, these publications being either in the hands of the printers at the time, or else having to be laid aside in order to complete more pressing work on hand. The number of unfulfilled requests last year amounted to approximately 90. Of "Sailing Directions" and "Pilots of Canadian Coasts and Waters" issued by this service, 191 copies were circulated during the year. Additional requests for certain ones of these publications could not be fulfilled until such time as new editions and, in some instances, entirely new publications, could be compiled, edited and printed for public use.

#### CIRCULATION OF CANADIAN CHARTS

The increasing popularity and usefulness of the navigational charts of Canadian coasts and waters, based on the Dominion's charting work and published by the Canadian Hydrographic Service, Department of Marine and Fisheries, is demonstrated in the attached table, showing the circulation by districts or waterways, of these publications during the five year periods from 1916 to 1929.

It may be reasonably deduced that, although a number of the charts are used for reference purposes and in connection with the study of power, engineering, scientific and general transportation problems, the growth of navigation and marine traffic of all kinds on the waters covered by them is closely related to the number of these indispensable aids furnished to the sea-going public each year.

District	1916-19	1920-24	1925-29
Atlantic Coast (18 charts).....	367	892	2,045
Lower St. Lawrence (19 charts).....	1,665	5,552	10,683
Quebec to Montreal (27 charts).....	4,541	8,802	11,938
Montreal to Kingston (10 charts).....	1,729	3,559	5,539
Lake Ontario (14 charts).....	1,469	3,247	4,645
Lake Erie (4 charts).....	194	545	1,550
Lake Huron and Georgian bay (22 charts).....	5,954	8,209	11,766
Lake Superior (14 charts).....	1,906	4,046	4,790
Lake of the Woods (1 chart).....	0	1,929	1,996
Lake Winnipeg (3 charts).....	289	234	416
Pacific Coast (24 charts).....	1,742	2,890	5,246
Hudson bay and strait (7 charts).....	183	392	1,007

#### FOREIGN CHARTS AND PUBLICATIONS

For a considerable number of years the British Hydrographic Office have furnished this service with copies of their charts. The number of these has increased with that country's production, and in addition, in the past few years the United States, Japanese, German, Italian, Chilean and other Governments, have made it a practice to forward to this service copies of the charts and publications issued by their respective hydrographic offices, and these are stocked here for reference purposes.

More and more this service is becoming the central Canadian repository for publications of a hydrographic nature, relating to coasts and waters all over the world. In addition to the regular navigational charts, the office is in receipt of pilots and weather charts, foreign notices to mariners, hydrographic bulletins, aerial charts, magnetic charts, current charts, and other published data of a related nature, that are now internationally exchanged.

The number of British and foreign navigational charts on hand here in 1926 was approximately 4,700; the number on hand this past year had increased to approximately 5,400.

In conclusion I wish to express my appreciation of the devotion to duty and efficient service rendered by all the members of the Canadian Hydrographic Service during the past fiscal year.

## RADIO BRANCH

REPORT OF C. P. EDWARDS, O.B.E., F.I.R.E., A.M.E.I.C., DIRECTOR

## NUMBER OF RADIO STATIONS IN THE DOMINION

The total number of licensed stations in operation in the Dominion and on ships registered therein was, on March 31, 1930, as follows:—

Coast stations .....	28
Land stations .....	1
Direction finding stations .....	12
Beacon stations .....	15
Radiophone stations .....	4
Government ship stations .....	44
Commercial ship stations .....	275
Limited coast stations .....	4
Aircraft stations .....	3
Public commercial stations .....	47
Private commercial stations .....	138
Private commercial broadcasting stations .....	81
Amateur broadcasting stations .....	10
Radiotelegraph training schools .....	6
Experimental stations .....	71
Amateur experimental stations .....	610
Private receiving stations (including 589 licences issued free to the blind) .....	424,146
Total .....	425,495

## LICENCE FEES

The annual fees charged in respect of radio licences issued by the Minister of Marine, are as follows:—

1. Limited coast stations.....	\$ 50 00
2. Public commercial stations.....	50 00
3. Private commercial stations.....	10 00
4. Experimental stations.....	5 00
5. Amateur experimental stations.....	2 50
6. Broadcasting stations, private commercial.....	50 00
7. Broadcasting stations, amateur.....	10 00
8. Private receiving stations.....	1 00
9. Technical or training school stations.....	5 00
10. Ship stations.....	10 00
11. Aircraft stations.....	10 00

## GOVERNMENT COAST STATIONS

“Coast Station” is the term used to designate a radio station established on shore to communicate with ships at sea. Canada’s extensive coast line demands a large number of stations to cover all its coasts and approaches thereto. The complete system consists of sixty stations located as follows:—

East coast (includes 9 radio beacons) .....	27
Great Lakes (includes 5 radio beacons) .....	13
Pacific coast (includes one radio beacon) .....	15
Hudson bay and strait .....	5
	<hr/> 60

The coast station system consists of three chains, one extending from Vancouver to Prince Rupert on the Pacific, another from Port Arthur to the Atlantic ocean in the east, and the third from Port Churchill to Resolution island at the eastern entrance to the Hudson strait, and for the purpose of administration, is divided into three divisions, Pacific coast, Great Lakes and East coast. The stations of the Great Lakes division communicate with those of the East coast division, but there is no direct radio connection between the Great Lakes and the Pacific coast.

Of the above stations nineteen on the East coast and Great Lakes are operated by the Canadian Marconi Company under contract with the department, and the balance of forty-one on the East and West coasts and Hudson bay and strait are operated directly by the department.

The primary aim of the coast station organization is to provide radio facilities whereby any ship within 500 miles of the Canadian coast can establish instant touch with the shore. Constant watch, 24 hours a day, 365 days a year, is maintained at practically all of the stations, which during the year handled a total of 9,167,302 words.

#### RADIOTELEGRAPH AIDS TO NAVIGATION BROADCAST

Twice daily, at advertised hours ten stations on the East coast, seven on the Great Lakes and one on the West coast broadcast information to navigators covering weather forecasts, position and nature of dangers to navigation, etc. In addition, urgent information, such as hurricane warnings, etc., is broadcast immediately upon receipt. Two stations in the Hudson bay and strait also broadcast forecasts during the season of navigation.

Details of the times of transmissions, call signals, wavelengths, etc., are given in the current "Notice to Mariners" in this reference.

#### RADIOTELEPHONE AIDS TO NAVIGATION BROADCAST

A radiotelephone service to fishermen is in operation on the East coast.

Three stations are used for this purpose: Louisburg (VAS), Halifax lightship (VCX), and St. John, N.B. (CFBO).

Louisburg using a 4,000 watt radiotelephone transmitter broadcasts on 434.8 metres at 3 a.m. and 12 noon, E.S.T., daily, a message to fishermen which includes weather forecasts, storm warnings and a synopsis of information in regard to the market prices of fish, the amount of bait on hand at various points, and any other outstanding items of interest to fishermen generally. The power used by this station enables fishermen to receive these messages as far east as the Grand Banks.

The Halifax lightship station broadcasts on 434.8 metres at 7 a.m. and 12.30 p.m., E.S.T., daily, and transmits the same message as Louisburg; it has a range of approximately 150 miles.

Station CFBO, St. John, broadcasts weather forecasts and storm warnings to fishermen in the bay of Fundy on 337.1 metres at 5 a.m. and 7 a.m., E.S.T., daily.

This service is augmented during the summer months by the C.G.S. *Arras* (CGFD) which accompanies the fishing fleet and broadcasts by radiotelephone on 434.8 metres storm warnings and weather forecasts at 6 a.m., E.S.T., daily, and a message to fishermen the same as that of Louisburg at 2.00 p.m., E.S.T., daily, with a range of approximately 150 miles.

The transmission from this network of stations provides reception at any point along the Atlantic seaboard as well as on the banks fished by Canadian vessels.

#### TIME SIGNALS

Time signals are transmitted as follows:—

##### *East Coast*

*Chebucto Head.*—Daily, except Sunday, at 2 p.m., G.M.T., on 600 metres. The inclusion of the long distance radiotelegraph station at Louisburg in the time signal organization is contemplated.

*West Coast*

*Gonzales Hill*.—Twice daily, at 10 a.m. and 7 p.m., P.S.T., on 900 metres.

*Estevan*.—Twice daily, at 10 a.m. and 7 p.m., P.S.T., on 600 metres.

## SPRING PATROL, CABOT STRAITS, GULF OF ST. LAWRENCE

The patrol service maintained in the Cabot straits at the opening of navigation was again undertaken this year by the ice-breakers *Mikula* and *Montcalm*, and commenced on April 9.

The patrol ships cruise in the vicinity of Cabot straits observing the ice conditions and the senior ship, every few hours, obtains from all incoming and outgoing ships, and from all radio and signal stations, a detailed report on the ice conditions in the different areas. These, in conjunction with her own observations are compiled and analyzed, and based thereon, a broadcast message, containing a synopsis of location and drift of the ice, together with recommendations as to the best route for ships to follow, is broadcast four times daily from the patrol ship, using the general call sign VCQP.

The coast radio stations at Chebucto Head (VAV), North Sydney (VCO), and Grindstone (VCN), are prepared to pass copy of this message to ships requesting it.

In addition the following stations broadcast a brief summary of the above-mentioned message:—

Station	G.M.T.	Wavelength
Louisburg—VAS .....	04.00	2,804 C.W. following weather forecasts
	16.00	
Cape Race—VAZ .....	02.15	600 spk.
	14.15	

Every vessel spoken is advised of the location and nature of the ice she may expect to encounter on her particular course, and the best route to follow.

The total number of words handled by the patrol this year was:—

<i>Mikula</i> .....	24,399
<i>Montcalm</i> .....	8,386
	<hr/> 32,785

The patrol was discontinued on May 15, 1930.

## RADIO DIRECTION FINDING

Twelve direction finding stations, 7 on the East coast, 4 on the Hudson bay and strait and 1 on the West coast are in operation. The East and West coast stations maintain "constant watch" throughout the year, and the Hudson bay and strait stations maintain a similar watch during the season of navigation only. These stations give bearings to any ships fitted with radio, free of charge.

The Canadian direction finding stations continue to enjoy a good reputation for efficiency and accuracy, many comments on the same having been received from navigators.

The number of bearings given by the stations vary from month to month, being dependent on weather conditions. The average number continues to increase, and has risen from 3,150 per month last year to 3,334 per month this year.

## BEARINGS GIVEN 1929-30

<i>Station—</i>	
Chebucto Head, N.S. ....	7,559
Canso, N.S. ....	5,121
Yarmouth, N.S. ....	8,411
St. Paul Island, N.S. ....	3,051
Cape Race, Nfld. ....	9,968
St. John, N.B. ....	1,429
Pachena Point, B.C. ....	3,077
Belle Isle, Nfld. ....	1,393

---

40,009

## RADIO BEACON SERVICE

There are now approximately 440 ships fitted with radio direction finding apparatus plying to and from Canadian ports.

The radio beacon system of the department comprises fifteen stations, located as follows:—

<i>East Coast and Gulf of</i>	<i>Great Lakes—</i>	<i>West Coast—</i>
<i>St. Lawrence—</i>	South East Shoal	Race Rocks,
Cape Bauld, Nfld.	Main Duck	Vancouver Island
Cape Whittle, Que.	Long Point	
West Point, Anticosti Isld.	Michipicoten Island	
Pointe-des-Monts, Que.	Cove Island	
Heath Point Lightship		
Cape Ray, Nfld.		
Sambro Lightship		
Seal Island, N.S.		
Lurcher Lightship		

A new type of beacon has been developed and delivered by the Canadian Marconi Company, the contractors. The new beacons deliver 200 watts power to the antenna and have a reliable range of approximately 75 miles. They differ from the old beacon in that they are entirely automatic in their operation and do not rely on the fog alarm engines for their power supply.

The old beacons were operated only during fog, whereas the new beacons are operated once an hour, day and night, and continuously during fog.

The control of the apparatus rests in a master clock which by making electrical contacts in proper sequence and at regular intervals starts the engine, the motor generators, the transmitter itself, and governs the period during which the signals are automatically sent out on the air. This new beacon, which is the result of several years' experience in beacon operation, is now adopted as standard.

Direction finding apparatus on board ship is accepted as one of the regular aids to navigation, and increase in the number of beacon stations is anticipated.

For the uninitiated it might be remarked that the difference between a radio beacon and a direction finder is in the case of a beacon the ship must be fitted with direction finding apparatus, whereby she can take her own bearings, whereas in the case of the direction finder ashore any ship fitted with radio can secure her bearings from the operator ashore, who transmits the information back to the ship by radio.

During the coming fiscal year it is proposed to instal five new beacons, located as follows:—

*West Coast.*—Dead Tree Point, Cape St. James, Langara, Triple Island, and Quatsino.

In addition to the above facilities, any ship can obtain signals for the purpose of taking bearings from any of the stations of our coast station system free of charge. Four thousand two hundred and two requests for signals for D.F. purposes were handled by the coast stations during the past year.

## COMMERCIAL SHIP SERVICE

Each of the regular twenty-eight coast stations handles commercial traffic to and from ships and in addition nine of the direction finding stations—Belle Isle, Yarmouth, Chebucto Head, St. John, Port Churchill, Nottingham Island, Cape Hopes Advance, Resolution Island, and Pachena—combine commercial service with their direction finding work.

Long distance service to ships on the Atlantic is provided by the licensed station at Louisburg, N.S., owned and operated by the Canadian Marconi Company, and on the Pacific by the departmental station at Estevan, Vancouver island. The traffic returns from these stations indicate that the route of commercial traffic continues to shift from the low power short wave coast stations to the high power long wave stations.

#### RADIOTELEPHONE SERVICE TO SMALL CRAFT ON THE PACIFIC COAST

The radiotelephone system has completed another year's work and is being used to a gratifying extent. The shore telephone stations are located at Vancouver (Merchants' Exchange), Merry island, Alert bay, and cape Lazo.

In addition the four life-saving radio telephone stations on the West coast of Vancouver island at Bamfield, cape Beale, Pachena point and Carmanah, are available for this service. Approximately fifty-one tugs and other small craft are now equipped with radiophone apparatus. The sets in these boats are operated by the captain or engineer and most of them are installed by an operating company on a rental basis which includes service. The number of paid radio telephone calls handled numbered 11,203.

#### SHIP'S EMERGENCY APPARATUS

The department has in effect an arrangement whereby its coast stations call upon Canadian and certain British ships to operate their emergency apparatus whilst at sea, in order to check their efficiency.

#### NUMBER OF SHIPS EXERCISED 1929-30

Total.....	401
Failures.....	Nil
Average time taken to change over.....	11.1 secs.
Time allowed .....	30 secs.

#### INSPECTIONS

The administration of the Radiotelegraph Act has been carried on as usual and no evasions or attempted evasions of section 7 of the Act (Revised Statutes of Canada 1929, chapter 195), calling for compulsory equipment of radiotelegraph apparatus on board passenger steamers, have been reported.

Permanent inspection establishments are now maintained at Victoria, Vancouver, Calgary, Edmonton, Regina, Moose Jaw, Saskatoon, Winnipeg, Toronto, Hamilton, London, Kitchener, Windsor, Ottawa, Montreal, Quebec, Saint John, Halifax.

Inspectors, in addition to inspecting all ships and licensed stations in their district, also undertake the examination of operators for certificates of proficiency. All land stations are inspected at least once a year, and all ships when they visit Canadian ports. Supervision of broadcasting comes under their jurisdiction and now comprises a considerable part of their duties.

The policy of utilizing the services of qualified radio operators as "part time" inspectors to look after small localities or areas and to assist permanent inspectors in the large centres continues to prove satisfactory. These "part time" inspectors are paid a nominal salary of \$15 to \$30 per month, and are located at the following points:—

*Nova Scotia.*—Glace Bay, Sydney, and Sydney Mines.

*Prince Edward Island.*—Charlottetown and Summerside.

*New Brunswick.*—Saint John, Moncton, and Fredericton.

*Quebec.*—Montreal, St. Lambert, Sherbrooke (vacant), Three Rivers, and Rivière du Loup.

Ontario.—Brantford, Fort William, Port Arthur, Hamilton, Kingston, Peterborough, Sarnia, Toronto (2), Windsor, Chatham, North Bay, Sault Ste. Marie, Kenora-Kewatin, Oshawa, St. Catharines, Niagara Falls, and Ganonoque (vacant).

Manitoba.—Brandon and Winnipeg.

Saskatchewan.—Saskatoon and Prince Albert.

Alberta.—Calgary, Lethbridge, and Medicine Hat.

British Columbia.—Vancouver, Kamloops (vacant), and Prince Rupert.

Yukon.—Dawson.

The number of inspections carried out during the fiscal year was:—

Coast and land stations.....	166
Ship stations .....	2,060
Amateur experimental and private receiving stations.....	29,420
Total.....	31,646

EXAMINATIONS FOR CERTIFICATE OF PROFICIENCY IN RADIOTELEGRAPHY

Protection for the safety of live at sea demands the employment of competent operators on ship and at shore stations, while interference problems necessitate a similar requirement in the case of amateur and land stations. To secure this the radio regulations provide that all operators must satisfy the minister as to their ability to operate the class of station on which they are working. In the more important classes of service the operators must be holders of first, second or other prescribed class of certificate, while in the case of stations of lesser importance, not likely to become a source of interference, the operators must satisfy a radio inspector that they are capable of handling their equipment in an efficient manner.

Two hundred and twenty operators were examined for commercial certificate of proficiency in radio during the year, including forty-nine re-examinations; one hundred and thirty candidates were successful and ninety failed. Six first class certificates issued under the Convention of 1912 were exchanged for second class certificates issued under the Convention of 1927 without further examination.

Two provisional certificates of proficiency in radiotelephony were issued during the year, and one renewed.

One hundred and six candidates for amateur radio certificates were also examined, of whom one hundred and three were successful and three failed.

Two thousand five hundred and forty-six certificates of proficiency in radio have been issued by the department up to the end of March, 1930.

FEEES FOR EXAMINATIONS

1. Extra First Class certificate.....	\$5 00
2. First Class certificate.....	2 50
3. Second Class certificate.....	1 00
4. Third Class certificate.....	1 00
5. Experimental certificate .....	2 50
6. Amateur certificate .....	0 50
7. Emergency certificate, any class.....	5 00
8. Radiotelephone certificate .....	2 50

RADIO BROADCASTING

Radio broadcast reception on the whole showed a slight improvement over the signal level which prevailed during the year 1928-29, especially during the winter months. Ninety-one broadcasting stations were licensed during the year.

Active stations .....	69
Phantom stations .....	19
Inactive stations .....	3
	91

(A phantom licence is one which authorizes the licensee to use the apparatus of an existing station under a special call sign).

The total number of licences issued for receiving sets was 424,146, an increase of 126,748, and the net revenue from broadcasting licence fees, after deducting commissions to radio dealers, and to the Post Office Department for the sale of licences, and the subsidy of \$13,185 to the Manitoba Government for stations CKY, Winnipeg, and CKX, Brandon (50 cents in respect of each licence issued in Manitoba), amounted to \$403,043.70.

#### COMMERCIAL ACTIVITIES

##### *Imperial Communication*

Pursuant to the recommendations of the Imperial Wireless and Cable Conference, held in London in February, 1928, all Imperial cable and wireless communications came under control of the merger company which came into being as of April 1, 1929.

##### *Transatlantic Radiotelephone Service*

A public radiotelephone service between Canada and Great Britain is now available to Canadian users through the medium of the transatlantic circuit operated by the American Telegraph and Telephone Company from New York.

In view of the desirability of establishing a direct Anglo-Canadian circuit, extended tests were carried out during the summer of 1929 between the Canadian Marconi Company's beam radio stations at Drummondville, Que., and the British Post Office station at Rugby, England.

Negotiations between the interested administrations and operating companies with a view to concluding an agreement for the establishment of such a service are proceeding.

#### TRAFFIC SECTION

This section of the Radio Branch handles the preparation, rendering and collection of accounts for commercial ship to shore and inter-station messages, handled by the departmental ships and stations and the auditing, rendering and collection of international accounts to various operating companies and foreign administrations for radiotelegrams exchanged by foreign ships through Canadian coast stations and by Canadian ships through foreign coast stations.

The number of accounts handled by the branch was 154,000 representing \$190,000 in tolls.

##### *Messages Handled by the Coast Station Services*

The total number of messages and words handled during the year ending March 31, 1930 (including retransmissions) was as follows:—

	Messages	Words
East coast .....	141,661	2,793,600
Great Lakes .....	36,218	581,037
West coast .....	235,435	4,801,959
Hudson bay and strait.....	27,598	990,706
	<hr/> 440,912	<hr/> 9,167,302

The business handled by the East coast system (operated partly by the Canadian Marconi Company under contract and partly by the department) shows a decrease of 36,804 messages with a decrease of 474,885 words.

The Great Lakes system (operated directly by the Canadian Marconi Company under contract) shows an increase of 1,074 messages with an increase of 80,298 words.

The West coast system (operated by the department) shows an increase of 16,265 messages with an increase of 517,184 words.

The Hudson bay and strait system (operated by the department) shows an increase of 4,138 messages with an increase of 101,760 words.

## REVENUE

The net radio revenue accruing to the Radio Branch from all sources during the year amounted to \$507,035.11 against \$352,178.43 in 1928-29, an increase of \$154,856.68. This revenue is apportioned as follows:—

<i>Traffic revenue—</i>		
East coast .....	\$	7,548 05
Great Lakes .....		833 33
West coast .....		69,253 10
Hudson bay and strait.....		13,093 43
	\$	90,727 91
<i>Other revenue—</i>		
License fees .....		415,885 70
Examination fees .....		421 50
		416,307 20
	\$	507,035 11

The East Coast traffic shows a decrease of \$7.83, the Great Lakes a decrease of \$233.94, the West coast an increase of \$2,913.68 and the Hudson bay and strait an increase of \$8,488.12. Total net traffic revenue increase \$11,160.03.

The licence fees show an increase of \$143,636.15 and the examination fees an increase of \$60.50. Total "other revenue" increase \$143,696.65.

## MEETING OF THE TECHNICAL COMMITTEE ON RADIO COMMUNICATIONS

The International Technical Consulting Committee on radio communications was instituted by the International Radiotelegraph Convention of Washington under Article 17 of the Convention and Article 33 of the General Regulations annexed thereto, for the purpose of studying technical and allied questions pertaining to the practice of radio communications.

The first meeting of this body was organized by the Administration of the Netherlands and held at The Hague from September 18 to October 2, 1929.

The meeting was attended by 185 delegates representing 50 Administrations and 31 private companies.

The representatives of the Canadian Administration, appointed under an Order in Council of August 22, 1929 (P.C. 192/1601), were Mr. W. A. Rush, General Superintendent, Radio Branch, Department of Marine; Mr. J. W. Bain, Radio Engineer, Department of Marine, and Major W. A. Steel, M.C., Department of National Defence.

The agenda of the meeting consisted of sixteen questions which had been previously submitted to the Administrations concerned.

Four committees were formed to deal with these questions:—

		<i>Chairmanship</i>
Committee No. 1—Organization .. . . .	Germany.	
" " 2—Definitions .. . . .	France.	
" " 3—Collaboration .. . . .	United States.	
" " 4—Operation .. . . .	Great Britain.	

While most of the questions submitted were of a technical character some of them either directly involved matters of policy or could be so developed and construed as to involve such matters.

The Canadian delegation were specifically instructed to oppose the adoption of any recommendation which would, in any way, commit the Canadian Administration on any matter of policy, as it was deemed that such matters were exclusively within the jurisdiction of the Radio Conference which is to meet at Madrid in 1932.

One of the most important questions which came under this category was the proposal to establish a permanent organization of the International Radio

Committee along the lines of the International Committee on Telegraphy and the International Committee on Telephony, with standing committees of reporters and a permanent secretariat. It was deemed by the Canadian Administration that such an organization would commit the participating Administrations to expenditures over which they would have no control.

The proposals were strongly opposed by the United States, Great Britain and Canada, the committee finally agreeing upon the principle that its work is to be carried out at its regular meetings only, as provided for under the Washington Regulations.

#### COMMUNICATION CHANNELS

One of the proposals submitted to the committee contemplated a frequency channelling system involving a definite frequency separation of 0.1 per cent between channels, thus dividing the frequency spectrum into a fixed number of communication channels.

Canada, while not opposed to the principle which has been recognized in the 1928 regional agreement between the North American countries, could not support the proposal for a channel width of 0.1 per cent which is in conflict with the North American agreement.

The recommendation finally adopted is to the effect that Administrations, when allocating frequencies above 6000 kc/s to fixed services should, whenever possible, do so in figures which are even multiples of five and to this is added an opinion that in the present state of the art a separation of at least 0.1 per cent between station frequencies is desirable to obtain reasonable freedom from interference.

It should be noted, however, that the present trend of the art is towards smaller frequency tolerances as the improvements in transmitter design and construction permit greater stability.

#### REGULATIONS CONCERNING AMATEURS

Some European countries presented proposals of international regulations concerning the technical qualifications of amateurs and these proposals received considerable support from the countries of continental Europe.

The United States and Canada supported by eight other countries including Great Britain submitted the view that this was not a matter for international regulations, but for national legislation, or possibly, regional agreements and the committee accepted this view.

#### STABILIZATION OF FREQUENCIES—TOLERANCES

With regard to the purely technical questions the most important recommendations of the committee are those dealing with frequency tolerances and with frequency measurement.

The very large number of stations projected, especially in the short wave region of the spectrum, makes the question of tolerances a very vital one. The frequency tolerances given in the following table represent the proposed maximum permissible difference between the nominal registered frequency and the mean operating frequency. They take into account the error in the calibration of the wavemeter used for tuning the transmitter, the error in measuring the frequency when tuning and the instability of the transmitter.

TABLE OF TOLERANCES IN THE MEAN TRANSMITTED FREQUENCY WITH RESPECT TO THE NOMINAL FREQUENCY

Class of emissions		Tolerances	
		immediately applicable	applicable with the least possible delay
A.	From 10 to 550 kc/s (30,000 to 545 m)	÷	÷
(a)	Fixed stations.....	0.1%	0.1%
(b)	Land stations.....	0.1%	0.1%
(c)	Mobile stations using any wave within the band for the duration of a transmission.....	0.5%	0.5%
B.	From 550 to 1,500 kc/s (545 to 200 m)		
	Radio Broadcasting Stations.....	0.3 kc/s	0.05 kc/s
C.	From 1,500 to 6,000 kc/s (200 to 50 m)		
(a)	Fixed stations.....	0.05%	0.02%
(b)	Land stations.....	0.10%	0.02%
(c)	Mobile stations using any wave within the band for the duration of a transmission.....	5 kc/s	5 kc/s
(d)	Fixed and land stations of low power (up to 250 watts in the antenna) working in the mobile and fixed services shared bands, for the duration of a transmission.....	5 kc/s	5 kc/s
D.	From 6,000 to 23,000 kc/s (50 to 13 m)		
(a)	Fixed stations.....	0.05%	0.01%
(b)	Land stations.....	0.10%	0.02%
(c)	Mobile stations using any wave within the band for the duration of a transmission.....	10 kc/s	5 kc/s
(d)	Fixed and land stations of low power (up to 250 watts in the antenna) working in the mobile and fixed service shared bands for the duration of a transmission.....	10 kc/s	5 kc/s

The discussions at the Hague brought out the fact that standard frequency meters must attain an accuracy of at least one part in one hundred thousand, and that this degree of accuracy can be normally attained in practice.

Frequency meters for use in fixed stations may be built with an accuracy of two to five parts in one hundred thousand.

The Committee recommends that all Administrations establish national standards capable of a degree of accuracy of at least one part in one hundred thousand.

#### RECEIVER SELECTIVITY

The Committee in view of the provisions of Article II, Para. 4, of the Washington General Regulations draws attention to the essential importance of receiver selectivity.

It considers that in so far as concerns the necessary separation between the frequencies of two stations operating on adjacent waves, receiver selectivity must be taken into account, to the same extent as tolerance and band width of the emission.

The Committee considers that a good modern receiver must be capable of receiving, not only the assigned frequency, but also the whole frequency band corresponding to the desired emission. A study of the methods of reception available, at present, shows that it is possible to design a receiver which, while accepting a frequency band equal to the emission concerned presents a considerable attenuation of all frequencies outside of a band, the centre of which coincides with the frequency of the desired emission and the width of which is equal to twice the communication band involved.

However, the fact is recognized that the great majority of receivers, at present in use, especially for the reception of short waves, are far from attaining this degree of selectivity. In view of the large numbers of projected stations, it will, no doubt, be necessary, in the near future, to employ receivers having a selectivity comparable to that mentioned above.

## USE OF SHORT WAVES

On the question of the principles to be adopted in the use of short waves the Committee is of the opinion that the best utilization of the frequency band from 1,500 to 23,000 kc/s necessitated taking into account the differences in the propagation characteristics of these waves, and recommends that the Administrations, in allocating to fixed services the frequencies within these bands, shall be guided by the following principles:—

(a) The frequencies from 6,000 to 23,000 kc/s <sup>1)</sup> (wavelength of 50 to 13 m) are, in principle, reserved for long distance communications (Washington General Regulations, foot note at the end of table in Article 5). However when it is daylight at the transmitting station (that is from about two hours after sunrise until about two hours before sunset) frequencies from 6,000 kc/s to about 9,000 kc/s <sup>1)</sup> (wavelengths from 50 to 33 m) may be used for medium distances.

(b) Frequencies from 6,000 to 3,500 kc/s <sup>1)</sup> (wavelength from 50 to 85 m) are, in principle, reserved for communications at medium distances.

(c) Frequencies from 3,500 to 1,500 kc/s <sup>1)</sup> (wavelengths from 85 to 200 m) are in principle used for communications at shorter distances.

In order to facilitate the application of these principles, it is recommended that, in so far as communications at short and medium distances are concerned, Administrations of neighbouring countries enter into regional agreements among themselves.

The meeting has been productive of constructive and beneficial results by making available a very large amount of information and experimental data, and, through the medium of discussion, crystallizing ideas and theories into definite facts and figures of considerable practical importance.

## TRANSATLANTIC

The Marconi Beam Service between Drummondville, Que., and Bodmin, England, which was inaugurated on October 25, 1926, continues in permanent operation. The rates in effect via this circuit are as follows:—

## CANADA EASTERN ZONE TO GREAT BRITAIN AND IRELAND

Fully paid messages .....	18c. per word
Deferred messages .....	8c. per word
Nightletter messages .....	\$1.00 for 25 words or less and 4c. for each extra word
Week-end letter messages .....	75c. for 25 words or less and 3c. for each extra word
Post letter messages.....	60c. for 20 words or less and 3c. for each extra word

## TRANSPACIFIC

The Marconi Beam Service between Drummondville, Que., and Ballan, Victoria, Australia, which was inaugurated on June 16, 1928, continues in permanent operation. The rates in effect via this circuit are as follows:—

## CANADA TO AUSTRALIA

Fully paid messages...	35c. per word
Deferred messages ....	17½c. per word .
Nightletter messages ..	\$2.70 for 20 words or less and 13½c. for each extra word
Week-end letters .....	\$2.10 for 20 words or less and 10½c. for each extra word

## HUDSON BAY ROUTE

With the erection of a direction finding station at Resolution island, the department's initial program of establishing a chain of radio stations as aids to navigation in the Hudson bay and strait was completed.

Further observations covering navigation conditions in the Hudson bay and strait during the season of navigation 1929 were made and have been compiled in book form, copies of which may be procured, upon request from the Department of Marine.

## COMMUNICATION WITH ISOLATED POINTS

The utility of radio as a means of communication with isolated points not reached by telegraph or telephone lines is now fully appreciated by private enterprise; during the year forty-six licences were issued to companies and private individuals for stations of this class.

Thirty-two licences were also issued to public utilities and power companies for the establishment of radio stations at their power plants and distribution centres for emergency communication in case of interruption of the normal telegraph or telephone communications.

## " 'UNTIN' BOWLER "

In order to demonstrate the feasibility of using the northern route for commercial air transportation between this continent and Europe, the *Chicago Tribune* sponsored a pioneer course charting flight which was undertaken by the trimotored Sikorsky Amphibian '*Untin*' Bowler.

The projected route was from Chicago via Cochrane, Ont., Rupert House, Que., Port Burwell, Que., Mount Evans, Greenland, and thence to Berlin, Germany.

Elaborate arrangements were made for federal and provincial radio stations within the range of the route to maintain constant watch in order to assist the plane as required. Special weather reports and forecasts were also prepared by the Dominion Meteorological Service and transmitted to the plane by radio.

The '*Untin*' Bowler left Chicago on the morning of July 3, 1929, and arrived at Port Burwell, Que., early on July 9, after several stop-overs incidental to refuelling and adverse weather conditions en route.

On July 13 the plane was caught in an ice floe and swept to sea by gale, and sank in the Hudson strait. There were no casualties. The crew of the '*Untin*' Bowler were subsequently picked up by the C.G.S. *Acadia* and landed at Churchill, Man.

Some 7,500 words of press traffic incidental to the flight were handled expeditiously by the Port Burwell, Que., station.

## RESCUE OF THE MACALPINE PARTY

Radio played an important part in the rescue of the members of the MacAlpine party who were lost for two months after their two planes made a forced landing in the sea near Melbourne island in the arctic circle on September 9, 1929.

An aerial search tied in with the department's radio stations at Ottawa, Ont., and Churchill, Man., in co-operation with the radio stations of the Dominion Explorers at Stoney rapids, Bathurst and Baker lake, was at once organized and continued until the party was located by Eskimos on November 4, 1929, and conveyed to Cambridge Bay.

At Cambridge Bay, the Hudson Bay ship *Baymaud* was wintering and the news of the rescue was passed to the outside world from the ship by radio via the department's radio stations at Churchill, Man., and Ottawa, Ont.

## WORK UNDERTAKEN ON BEHALF OF OTHER DEPARTMENTS OF THE GOVERNMENT

*Royal Canadian Mounted Police*

Prior to sailing on an extended cruise to the western Arctic the R.C.M.P. auxiliary schooner *St. Roch* was fitted with long and short wave transmitting and receiving apparatus in order to maintain contact with its headquarters.

An operator from this branch was detailed as special officer in charge of the radio equipment.

*Department of Railways and Canals*

The station at mile 356 Hudson bay railway, having served its purpose, was closed on September 24, 1929.

This station was used in connection with the development of the Hudson bay route for maintaining communication with the end of steel and was manned by personnel of this branch.

The radio equipment of the steamer *Ocean Eagle* (supply ship), engaged in connection with the construction of Port Churchill harbour works, is maintained and operated by personnel of the Radio Branch.

*Department of Fisheries*

The radio installations of the Fisheries patrol steamers *Givenchy* and *Malaspina* on the West coast and *Arras* and *Arleux* on the East coast are maintained and operated by this branch.

*Department of National Revenue*

Acting on behalf of the Customs Preventive Service, this branch operates and maintains the radio equipment of the Customs cruisers *Baroff*, *Bayhound*, *Constance*, *Margaret*, *Vigilant*, *Conestoga* and *Fleur-de-lis*.

## OTHER DEPARTMENTS OF CANADIAN GOVERNMENT OPERATING STATIONS

*The Department of National Defence*

The Royal Canadian Corps of Signals of the above department operates, in addition to its purely military activities, stations on behalf of the following departments and civil activities of the Department of National Defence:—

*Interior Department (N.W.T. and Yukon Branch)*

Seven permanent stations and one summer station situated along the McKenzie river and in the Yukon Territory.

*National Defence Civil Government Air Operations*

Nine permanent and five summer stations in connection with its forestry and other air activities.

*National Defence Civil Aviation Branch*

One permanent station situated at St. Hubert airport, Montreal.

## THE ROYAL COMMISSION ON RADIO BROADCASTING

The Royal Commission on radio broadcasting completed its investigations and submitted its report to the Honourable the Minister of Marine and Fisheries on September 11, 1929.

The commission which was appointed by order in council, P.C. 2108, of December 6, 1928,

"To examine into the broadcasting situation in the Dominion of Canada and to make recommendations to the Government as to the future administration, management, control and financing thereof."

consisted of the following members:—

Sir John Aird, President, Canadian Bank of Commerce, Toronto, Ont.  
(Chairman).

Charles A. Bowman, Editor, the *Citizen*, Ottawa, Ont.

Augustin Frigon, D.Sc., Director, Ecole Polytechnique, Montreal, Que.,  
Director-General, Technical Education, Province of Quebec, Montreal, Que.

Secretary, Donald Manson, Chief Inspector, Government Radio Service, Ottawa, Ont.

The following is a summary of the recommendations of the commission:—

- (a) That broadcasting should be placed on a basis of public service and that the stations providing a service of this kind should be owned and operated by one national company; that provincial authorities should have full control over the programs of the station or stations in their respective areas;
- (b) That the company should be known as the Canadian Radio Broadcasting Company; that it should be vested with all the powers of private enterprise and that its status and duties should correspond to those of a public utility;
- (c) That a provincial radio broadcasting director should be appointed for each province to have full control of the programs broadcast by the station or stations located within the boundaries of the province for which he is responsible;
- (d) That a provincial advisory council on radio broadcasting should be appointed for each province, to act in an advisory capacity through the provincial authority;
- (e) That the board of the company should be composed of twelve members, three more particularly representing the Dominion and one representing each of the provinces;
- (f) That high-power stations should be erected across Canada to give good reception over the entire settled area of the country during daylight, that the nucleus of the system should possibly be seven 50,000 watt stations; that supplementary stations of lower power should be erected in local areas, not effectively covered by the main stations, if found necessary and as experience indicates;
- (g) That pending the inauguration and completion of the proposed system, a provisional service should be provided through certain of the existing stations which should be continued in operation by the Canadian Radio Broadcasting Company; that the stations chosen for this provisional service should be those which will give the maximum coverage without duplication; that all remaining stations not so needed should be closed down;
- (h) That compensation should be allowed owners of existing stations for apparatus in use as may be decided by the Minister of Marine and Fisheries; that such apparatus should become the property of the Canadian Radio Broadcasting Company; that the more modern and efficient of these sets of apparatus should be held available for re-erection in local areas not effectively served by the high-power stations; that the cost of compensation should be met out of an appropriation made by Parliament;
- (i) That expenditure necessary for the operation and maintenance of the proposed broadcasting service should be met out of revenue produced by licence fees, rental of time on stations for programs employing indirect advertising, and a subsidy from the Dominion Government;
- (j) That all facilities should be made to permit of chain broadcasting by all the stations or in groups; that while the primary purpose should be to produce programs of high standard from Canadian sources, programs of similar order should also be sought from other sources;
- (k) That time should be made available for firms or others desiring to put on programs employing indirect advertising; that no direct advertising should be allowed; that specified time should be made available for educational work; that where religious broadcasting is allowed, there should be regulations prohibiting statements of a controversial nature or one religion making an attack upon the leaders or doctrine of another; that the broadcasting of political matters should be carefully restricted under arrangements mutually agreed upon by all political parties concerned; that competent and cultured announcers only should be employed;

- (l) That consideration should be given to the question of introducing legislation which would compel users of electrical apparatus causing interference with broadcast reception to suppress or eliminate the same at their own expense;
  - (m) That the licensing of stations and such other matters prescribed in the Radiotelegraph Act and Regulations issued thereunder for the control of radio stations in general should remain within the jurisdiction of the Minister of Marine and Fisheries; that that authority should continue to be responsible for the collection of licence fees and the suppression of inductive interference causing difficulties with radio reception.
- The complete report has been printed and is now available to the public. Copies may be obtained from the department at 25 cents each, post free.

#### INDUCTIVE INTERFERENCE SECTION

This section has been operated along the same general lines as in the past, with slightly augmented staff and equipment.

Twenty-four cars are equipped and in operation, investigating interference, with headquarters at Vancouver, Calgary, Edmonton, Regina, Saskatoon, Moose Jaw, Winnipeg, Windsor, London, Hamilton, Kitchener, Toronto, Ottawa, Montreal, Quebec, Saint John, N.B., and Halifax.

Each car is manned by two men and, in addition to looking after interference in the cities in which they are based, make regular tours throughout their allotted sections of the surrounding country.

In addition to the regular tours, special trips are made by the investigators, either with a car, or by train, to points where special interference is reported as affecting many broadcast listeners.

"Part-time" inspectors, located in thirty-three (33) towns and cities, are provided with limited equipment for the investigation of radio interference and carry out preliminary investigations in all cases of interference in their districts. If they are unable to arrange for the elimination of same, with the facilities at their command, an investigator is sent from the nearest divisional headquarters.

The equipment of the interference cars, as a result of our experience, has been considerably improved during the year. The cars now carry a radio receiver with a direction finding loop, by means of which the investigator is able to associate the interference with certain particular power and distribution lines. They also carry a small portable receiver, to which may be attached exploring coils, a probe antenna and other devices for detailed investigation after the district has been patrolled and the probable source of the interference has been narrowed down to within a small area. Other equipment carried in the cars includes complete sets of experimental surge traps for the suppression of interference from any kinds of electrical apparatus and, also, meters and test equipment to aid in locating faults and suppressing interference.

It frequently happens that the interference reported is not continuous and that, when the investigator visits the town, it is not present. In such cases, he endeavours to produce, artificially, conditions which will cause it to start. With the permission of the public utilities he strikes the poles carrying transformers and other electrical apparatus, and shakes the guy-wires, causing the power lines to swing and vibrate as they would in windy weather or when heavy traffic is passing; and, should it result that the interference is caused by the distribution system or apparatus belonging to the local public utility, the investigator obtains the assistance of a lineman, locates the exact source and reports to the local superintendent of the utility, who invariably takes steps to repair the fault found to be the cause. On the other hand, should the interference be traced to some privately owned electrical apparatus, the owner of the same is requested to take the necessary steps towards elimination. When the interference is caused

by the normal operation of electrical apparatus, the investigator tries the effect of surge traps and preventive devices, which are carried in the car, and advises the owner regarding means of eliminating the interference.

Local radio associations are instructed how to deal with simple sources of interference and are provided with circulars outlining tests, to assist them in locating and eliminating the interference experienced.

A number of illustrated lectures have been delivered by the staff to radio clubs and technical societies, with the object of encouraging all those interested to do their part in improving reception conditions, by suppressing interference wherever possible.

We are pleased to state that our investigators have received the greatest co-operation in their work, in practically all centres visited, particularly from the public utilities; many of the latter have provided themselves with portable radio receivers for the investigation of interference caused by their lines. It is gratifying to note the increased interest in the prevention of radio interference on the part of most of the utilities throughout the country, who realize the importance of eliminating any sources of interference due to their systems, both for the sake of the good-will of the listening public and to ensure that their lines and apparatus are in first class condition. Frequently, radio interference is the first warning that defects are present, which, if permitted to continue, may result in serious damage to valuable plant. The Radio Branch investigators advise the superintendents and linemen of the public utilities with regard to means of dealing with the interference and supply circulars prepared by headquarters describing means of locating and eliminating interference radiating from distribution equipment.

In the case of privately owned electrical apparatus, such as violet ray machines, farm lighting plants, electrical signs, and the multitude of other sources of interference, it is found that rarely does any person desire to be regarded as a cause of nuisance to his neighbours and, in nearly all cases, they agree either to cease using the interfering apparatus during the broadcast hours, or, if the interference is preventable, to install suppression devices. In some cases, the local listeners affected have subscribed the cost of these devices, which are usually inexpensive and can be easily installed by a qualified electrician.

The number of sources of radio interference investigated during the year is as follows:—

Sources investigated	1927-28	1928-29	1929-30
Electrical distribution systems and power lines.....	4,383	4,271	6,405
Domestic and commercial electrical apparatus.....	901	1,650	2,123
Radio apparatus (amateur and commercial).....	152	356	723
Total sources investigated.....	5,436	6,277	9,251

Action taken	1927-28	1928-29	1929-30
Number of sources definitely reported cured.....	4,880	5,273	8,301
Number of sources not yet reported cured.....	465	855	782
Number of sources having no economic cure.....	91	149	168
Total.....	5,436	6,277	9,251

In addition to the sources listed above, a great number of cases have been dealt with by correspondence, and the interference successfully eliminated by the owners of the apparatus by following our advice. When the broadcast listener is able to describe the interference so that our inspector can tell the source of the same without a special investigation, the case is referred to the

owners of the interfering apparatus to be dealt with by them and is not included in the total of sources investigated. Interference from dial telephones is dealt with in this manner by the Bell Telephone Company.

Many special surge traps have been designed by the department and special and standard surge traps, not yet produced commercially, are sold by us to owners who wish to suppress interference from domestic and commercial electrical apparatus.

Many of the 782 sources, which are listed as not yet reported cured, have probably been successfully dealt with by the owners of the apparatus causing the interference.

The sources recorded as having no economic cure include some cases of power line and street car interference, where the radio receivers are close to the power lines. They, also, include certain electro-medical and other types of apparatus where all known means have failed to eliminate the interference. Research on these problems continues in an endeavour to find a means of suppression.

The increase in the number of sources investigated during the year is due, partly, to the slight increase in staff, but, to a greater extent, to the improved methods and equipment, as well as greater skill on the part of the investigators.

The amount of interference caused by distribution systems throughout Canada is on the decrease, due to improved maintenance by many public utilities, who are giving serious consideration to the question of radio interference from their systems. This condition is particularly noticeable in the section of Ontario bounded by Peterborough, Goderich, Windsor and Niagara, as shown by the fact that, in this district in 1928-29, the number of defective transformer cut-outs found to be causing interference amounted to 1,099, while in 1929-30 this number was reduced to 762.

The lines of some public utilities are, however, still far from satisfactory, from a radio standpoint, and investigators have, in one day, located as many as forty-five faults on the distribution systems in one city which faults were causing radio interference. This number may be compared with forty-nine faults found in six months in a larger city where the lines are maintained in good condition.

In six hundred and twenty-nine cases of reported interference, investigations proved that the interference was caused by defects in the complainants' own radio receivers.

The interference from a single source frequently travels many miles along the power wires and affects thousands of broadcast listeners. An example of such a case was recently located by our investigators near Three Rivers. The 15,000 volt line was making intermittent contact with a guy-wire and ruining radio reception all the way from Ste. Anne de la Pérade to Three Rivers, Que., a distance of about twenty-five miles.

Research work has been carried out both at Ottawa and on many transmission lines and industrial plants throughout Canada, as well as by several of the radio inspectors at their own headquarters. Types of apparatus and methods of investigating interference have been developed and a number of surge traps, both for experimental purposes and for permanent installation, have been designed.

Several manufacturers of electrical apparatus have been approached regarding certain features of their products which cause radio interference, and, by co-operation with the Radio Branch, the designs have been revised to eliminate the objectionable features. Some dealers guarantee their products not to cause radio interference, and such articles as electric warming pads have been replaced by dealers free of charge on that account.

The work of the investigators, besides arranging for the elimination of radio inductive interference, frequently benefits public utilities and the general public by locating faults on electrical lines and apparatus, which, if not repaired in their early stages, would probably develop into serious faults and become fire or accident hazards. During the past year the investigators have located hundreds of cases in which guy-wires have come in contact with high voltage power wires, thus, creating a hazard to any one who might touch the guy-wire above the insulator, while minor faults have also been located on power house apparatus which, if not repaired, would be likely to cause interruption in the electric service or material damage to the electrical equipment. The following case is an interesting example of the work of removing dangerous conditions:—

On March 24, 1930, the Ottawa investigators traced a case of severe and widespread interference to its source and found a radio aerial in contact with a 2,200 volt distribution line. The aerial had been erected from a house to a tree over the power line. The end of the aerial, which was attached to the house, had become disconnected and fallen on the high voltage line, leaving about 20 feet of aerial lying on the snow covered surface of the ground. Had anyone come in contact with this wire, he would have received a shock from the 2,200 volt line, which would probably have proved fatal. The tenant of the house stated that he knew nothing of the aerial which had evidently been erected by a previous tenant. A lineman was immediately called, who removed the aerial from the power line.

Broadcast listeners have been warned against the practice of attaching radio aerials above any power lines, or to any poles belonging to public utilities, without the approval of the owners of the poles.

In addition to the interference work, the investigators do other work required by the Radio Branch in the towns they visit. Such work includes the sale of licences, inspection of amateur stations and the examination of candidates for operators' certificates.

An engineer of this branch is working on the Committee of the Canadian Engineering Standards Association, which is drawing up a code of principles and practices for outside wiring and it has been suggested that the matter of suppressing radio interference be included in this code.

The net result of the year's work of the Inductive Interference Section may be summarized as follows:—

- (1) Most of the new cases of interference, which have been brought to the attention of the department, have been successfully dealt with.
- (2) Many cases of interference of long-standing have been successfully dealt with, thus materially reducing the noise level of the interference in many districts. It has been the hope of the department to further reduce the noise level to an extent in keeping with the increased sensitivity of the modern radio receivers. So far, in spite of our efforts, the great increase in the number of sensitive receivers of the batteryless type, now in use, has had the effect of giving the appearance of a rise in noise level, although, as previously stated, it is decidedly lower.
- (3) Practically all the public utilities are maintaining their lines and apparatus in a much better condition from a radio standpoint and doing everything in their power to eliminate interference caused by their equipment.
- (4) The general public are beginning to realize that it is necessary for them to co-operate in order to reduce the interference in their districts, by avoiding, during broadcast hours, the use of battery chargers, violet rays and other spark producing apparatus.
- (5) Development work by the department has been successful in providing new investigation apparatus and means of locating and eliminating the interference from many types of electrical equipment, and we hope to progress still further along these lines.

- (6) Research work has been commenced in an endeavour to find a means of dealing with interference from high voltage power lines and electric railway systems. The results show promise of reducing the noise level from these sources, which were hitherto conceded as incurable.

#### NEW CONSTRUCTION ADDITIONS AND ALTERATIONS

The regular maintenance work such as painting, repairs, etc., was carried out as usual at all those stations requiring attention.

On the Pacific coast no extensive new construction work was carried out, but some smaller jobs were completed such as the erection of a new one hundred and fifty foot angle iron mast at Alert Bay, the installation of a modern C.W. transmitter at Bull Harbour in a room partitioned off from the operating room and the installation of a new type D.F. receiver at Pachena. The new operating house started in 1928 at Digby was completed and a new C.W. transmitter installed.

A complete new D.F. station was built on Resolution island in Hudson straits. All the machinery and apparatus which was at Port Burwell was transferred to Resolution, and Port Burwell was permanently closed down.

In the gulf of St. Lawrence three new 200 watt automatic radio beacons were constructed at the following points: Cape Whittle; West Point, Anticosti; and at Pointe des Monts.

Five new 200 watt automatic beacons were built on the Great Lakes located at Main Duck island; Michipicoten; Cove island; Southeast Shoal and Long Point.

On the East coast automatic beacon equipment was installed on the Lurcher lightship. No other work except repairs and maintenance was carried out.

*Alert Bay.*—The C.W. transmitter was moved into a new addition to the operating house and new power control wiring installed. The double dwelling was wired for electric lights and connected to starting battery by an underground cable. A new operating table was built. The old tree mast was taken down and a new 150-foot angle iron mast erected in its place. New automatic safety switches have been wired up to safeguard the operator from contact with live high voltage wires in the transmitting room.

*Bull Harbour.*—One end of the operating room was partitioned off and three units of a modern C.W. transmitter, which had been made up in the workshop at Victoria, were installed in this space. The tramway track was extended 175 feet beyond the high tide mark, in order to facilitate unloading heavy supplies such as gasoline drums and coal directly from boats to tram car. The old decayed water tower was demolished and a new one built in its place.

*Estevan Point.*—The thirty-nine plate Hart battery was overhauled and tests were made on it to ascertain its condition. A garage was built to house the tractor and Ford truck. Considerable road work has been completed by laying corduroy covered with gravel. A receiver for the reception of radiophone signals from private commercial stations was installed.

*Gonzales Hill.*—A successful break-in relay was developed and installed on the C.W. transmitter. A mechanical remote control wave changing device was installed which enables the operator to change wavelength from his chair. A screen grid valve was incorporated in the type 707 receiver.

A new front verandah and front steps were built in the operating house and half the roof was reshingled. A new hand rail and landing was built at the dwelling and the roof and trimmings painted.

*Point Grey.*—A new type 707 receiver with screen grid valve together with a new short wave receiver and "B" eliminator was installed.

*Vancouver Station.*—The new location for the Vancouver city station in the Marine Building, was inspected and a ground system and all entrances for power connections completed.

*Pachena Point.*—A type G-3 D.F. receiver was installed here and the station was recalibrated. The battery room was enlarged and the interior of the old D.F. building lined with V joint.

New stays were placed on the mast and two jury masts renewed.

*Digby Island.*—The new operating house was completed in May, 1929. A furnace was put in and the building was completely wired for electric lights.

A 1,600 watt transmitter was installed and was equipped with a mechanical remote control switch for changing wavelengths.

A Matthews generating unit with starting battery was installed as an emergency stand-by in case of power failure and connected for use on the 1,600 watt transmitter.

A short wave transmitter and a 100 watt radiophone set were installed complete with the necessary machines and receivers.

A new ground system consisting of buried copper plates was constructed.

The transformer substation was moved from its former location to a new position beside the tramway tracks and a power line was run down to the shore to connect to the submarine cable supplying power for lighting to the Marine depot on the opposite side of Casey bay.

*Cape Lazo.*—A right of way was slashed and a pole line erected to carry central station power to the dwellings and operating house. The dwellings were wired for lights and the wiring in the power house rearranged.

A 100 watt radiophone transmitter was installed to replace the 50 watt transmitter previously in use.

*Dead Tree Point.*—A new receiver for the reception of radiophone signals between 100 and 200 meters was made up and installed.

*Merry Island.*—The old battery was taken out and replaced by a battery of repaired cells from the workshop.

*Chebucto Head D.F. Station.*—The space from the under side of the sills to the ground was boarded in and shingled on both the operating house and the operator's dwelling in order to make these buildings more comfortable.

A new heater was set up in the mess house and additional storage space provided for provisions.

The main mast stays were renewed and the rigging overhauled.

The annual grant for road improvement was expended.

*Yarmouth D.F. Station.*—Very little work was necessary at this station beyond painting the mast and rigging, and general clearing up of the grounds.

*Red Head D.F. Station.*—Only minor repairs were necessary at this station. The verandah of the bungalow was glassed in, as an added protection against cold winds from seaward. A new floor was laid in the office attic to provide additional storage space.

*Cape Race D.F. Station.*—The standard type of operating table for D.F. stations was installed and the 12 A.D.F. receiver replaced by the type G3. The latest type of D.F. send-receive aerial switch was installed.

Thirty positive plates were replaced in the main battery, new wood separators put in and electrolyte added.

The rigging was overhauled and painted and a new aerial hoisted into position.

*Canso D.F. Station.*—The new type aerial suspension gear was installed and all the main stays renewed, after which the station was recalibrated.

A new water-cooling tank was installed in the power house. The main bank of B6 Edison cells was cleaned out and repaired.

*St. Paul Island D.F. Station.*—The mess house was painted inside and the office both inside and outside. Three rotten still posts under the buildings were replaced.

The roof of the storage shed at the slipway was re-covered.

Necessary repairs to the plumbing fixtures in the dwelling were carried out.

All apparatus and equipment, including the telephone line to the N.E. light-house, was given a thorough overhaul. The rigging was carefully gone over and a new aerial was hoisted.

*Belle Isle D.F. Station.*—The LeRoi engine was sent out for general overhaul and the spare engine installed in its place.

A new storehouse was built at a convenient location near the dwelling.

The rigging and mast were overhauled and painted and a new aerial hoisted.

*Great Lakes.*—No new work was carried out at the Government-owned Marconi-operated stations on the Great Lakes. The Marconi Company took care of all maintenance work.

New automatic radio beacon stations were built at the following points: Main Duck island, Michipicoten island, Cove island, S.E. Shoal and Long Point. Duplicate transmitters were installed at Michipicoten and Cove islands and single transmitters at the other three places, with provision made for duplication at a later date.

*Gulf of St. Lawrence.*—No new work was done at the Government-owned Marconi-operated stations here.

Automatic radio beacon stations equipped with single transmitters with provision for duplication later were installed at Cape Whittle, West Point, Anticosti and Pointe des Monts.

*Port Burwell.*—This station was completely dismantled except for steel masts, and the apparatus was transferred across the straits to the new D.F. station built on Resolution island.

*Resolution Island D.F. Station.*—A complete new D.F. station was erected on the site chosen the previous year and was calibrated.

Five buildings were erected, two of which are heated, and are therefore specially insulated to withstand the northern climate.

An aerial tramway 1,435 feet long with a gasoline engine-driven hoist was built to haul the material from the beach to the site.

The equipment consists of two 150-foot steel masts, one of which serves the double purpose of supporting the D.F. loops and one end of the flat top transmitting aerial, a 1,600-watt C.W. transmitter supplied with power from either of two 6-K.V.A. Matthews generating sets, a 32-volt battery which serves to start the engines and supply light to the buildings, and a type G3 D.F. receiver, a type M.S. stand-by receiver, and a small short wave receiver.

An emergency generating plant and 50-watt transmitter with type M.S. receiver were installed in the storehouse to provide means of communication, in case the main station should be destroyed by fire.

*Cape Hopes Advance D.F. Station.*—A second remotely controlled 5-K.W. D.C. generating unit was installed, similar to the one furnished and put in on trial the previous year. The replaced machine was moved to the storehouse to supply power for the emergency transmitter installed there.

*Nottingham Island D.F. Station.*—The old storehouse was torn down to reduce the fire hazard between the office and dwelling and the stores moved into the spare dwelling, which was used during the winter of 1927 by the members of the Hudson Straits Expedition.

An emergency transmitter was installed in the spare dwelling and put into successful operation.

*Port Churchill D.F. Station.*—No new work was done here except recalibrating the station.

SPECIAL ASSISTANCE RENDERED TO SHIPS DURING THE YEAR BY GOVERNMENT  
RADIO STATIONS

## WEST COAST

*Digby Island*

M.S. *Culburra*.—At 6.45 a.m. on September 13, 1929, the M.S. *Culburra* reported to the Digby Island station, ashore on Kennedy island at 6 a.m. in dense fog, no danger to crew and no passengers on board. At 6.50 a.m. Digby island notified the Pacific Salvage Company at Prince Rupert, who dispatched tug and scow. At high tide same afternoon the *Culburra* with assistance of tug floated off undamaged.

The West Coast stations were also of assistance to the ss. *Cardena*, *Empress of Canada*, *Sutorpco* and *Gogovale*.

## GREAT LAKES

*Port Burwell, Ont.*

SS. *Midland Prince*.—At 10.13 p.m. on May 29, 1929, the ss. *Midland Prince* advised the Port Burwell station, grounded off breakwater at Port Stanley and requested to be informed of whereabouts of ferry *Marquette* and *Bessemer*. The *Midland Prince* was released by the ss. *Midland King* at 3.20 p.m. on May 30.

The Great Lakes radio stations were also of assistance to the ss. *Sarniadoc*, *Maplecourt*, *Manitoulin* and *Saskadoc*.

## EAST COAST

*Fame Point, Que.*

SS. *Gaspesia*.—At 4.15 p.m. E.S.T., on November 11, 1929, the Fame Point station received a message by landline from Chlorydorme, Que., in which the master of *Gaspesia* advised vessel had lost rudder, and requesting assistance of tow to Gaspé. Fame Point advised the ss. *Sable I* and C.G.S. *Margaret* and both ships replied were proceeding to assistance. This information together with expected time of arrival was telegraphed to the master of the *Gaspesia* at Chlorydorme. The *Gaspesia* was towed to Gaspé by the ss. *Sable I*.

*Father Point, Que.*

SS. *Concordia*.—At 6.10 a.m. on November 7, 1929, the ss. *Concordia* advised the Father Point station, stranded off Ste. Flavie and requested that a pilot be sent to her. The pilot station was advised immediately. The *Concordia* refloated on the morning of November 13, and proceeded to Quebec for repairs in company of wrecking tug.

*Quebec, Que.*

SS. *New Aster*.—At 8 a.m. E.S.T., on July 18, 1929, the ss. *New Aster* advised the Quebec station that she had collided with the *Prince Shoal* lightship and being badly damaged was returning to Quebec for necessary repairs. The lightship suffered only small damage.

*North Sydney, N.S.*

SS. *Farnorth*.—At 2.37 p.m., E.S.T., on September 15, 1929, the North Sydney station received a distress message from the ss. *Farnorth* advising ashore off

Gallantry Head, St. Pierre, Miquelon. North Sydney broadcast message and at 3 p.m. heard the *Farnorth* communicating with the ss. *Imogene*. At 3.55 p.m. the *Farnorth* advised refloated again now 2 miles S.S.E. Gallantry Head waiting for pilot.

*Sable Island, N.S.*

American fishing schooner *Mary Sears*.—At 10.30 a.m., E.S.T. on June 10, 1929, the operator on watch at the Sable Island station sighted a schooner on fire and immediately broadcast a message to all trawlers in vicinity. At 10.45 a.m. the trawler *Rayon D'or* reported could see schooner on fire. At 12.45 p.m. the French trawler *Sergent Gouarne* advised schooner abandoned, all crew safe.

*Cape Race, Nfld.*

Schooners *George K* and *Catherine B*.—At 8 a.m. on December 1, 1929, the ss. *Hofplein* advised the Cape Race station of rescue of crew of schooner *George K*. Crew landed at St. Johns, Nfld., schooner abandoned. At 10 p.m. same day the *Hofplein* advised had rescued crew of schooner *Catherine B*. Crew taken to Rotterdam. Schooner abandoned.

Schooner *Merry Widow*.—At 1 p.m. on December 6, 1929, the ss. *Beothic* advised the Cape Race station of rescue of crew of schooner *Merry Widow* which sank ten minutes after rescue effected.

Schooner *Northern Light*.—At 9.30 a.m. on December 6, 1929, the ss. *Baltic* advised the Cape Race station of rescue with exception of one man of crew of schooner *Northern Light*. The schooner was abandoned.

Schooner *Janie E. Blackwood*.—At 2 a.m. on December 12, 1929, the ss. *Cairnmona* advised the Cape Race station that the schooner *Janie E. Blackwood* was in distress. Cape Race informed the ss. *Beothic* and *Meigle*. The crew of the *Blackwood* were rescued by the ss. *Nova Scotia*, the schooner being abandoned.

*Chebucto Head, N.S.—Direction Finding*

Trawler *Remy Chuinard*.—At 0440 G.M.T. on October 3, 1929, the Chebucto Head station received a distress message from the trawler *Remy Chuinard* advising ashore, require assistance. The Chebucto and Canso D.F. stations were unable to obtain a cross bearing on the trawler apparently ashore Sandwich Point at entrance to Halifax harbour. At 0510 Chebucto telephoned the Halifax Citadel to send tug to assist. At 0830 tugs made fast to trawler and later vessel was floated off and taken to Halifax.

*Yarmouth, N.S., Direction Finding*

SS. *Prince George*.—At 0914 G.M.T. on July 7, 1929, the Yarmouth D.F. station received a distress message from the ss. *Prince George* in collision with U.S. patrol cutter 65 miles east of Boston light and requesting assistance of ss. *Evangeline*. At 0925 *Prince George* sent D.F. test for *Evangeline*. Yarmouth tried take bearing but signals too weak. At 0940 *Prince George* stated "power will soon be gone." The *Prince George* reached Boston under own power, all passengers safe.

American trawler *Notre Dame*.—At 12.10 G.M.T. on March 6, 1930, the Yarmouth D.F. station intercepted a distress message advising "American trawler *Notre Dame* aground on Hardings Ledge, Boston Harbour, seems badly damaged, waiting for coast guard to get her off." No further information in regard to this vessel was received by the Yarmouth station.

SS. *Eugenie*.—At 1550 G.M.T. on March 19, 1930, the Yarmouth D.F. station received a distress message from the ss. *Eugenie*, position 35°30' N. 66°20' W. bound from Marseilles to Baltimore, steering gear broken. Distress

signals were answered by ships in vicinity of position given. The *Eugenic* finally reached port.

The East coast radio stations were also of assistance to the ss. *Nils*, *Bellfri*, *Norbiton*, *Baucis*, *Nubian*, *Wabana*, *Blairesk*, *Hertha*, *Laval County*, and *Cairnesk*.

#### EAST COAST VISUAL SIGNAL SERVICE

Signal stations on the East coast are under the administration of the Radio Branch and under the direct jurisdiction of the Division Superintendent of Radio at Halifax. All radio stations report ships communicated with and this is supplemented by reports of ships sighted by the following visual signal stations which are organized to tie in with the East coast radio service:—

*Magdalen Islands*.—Including Grindstone, Amherst Island, Pleasant Bay, Grosse Isle, and Etang-du-Nord. Wireless to Sydney.

*St. Paul Island*.—Signal agent part-time. Wireless to Sydney.

*Aspy Bay*.—Signal agent part-time. Landline to Sydney.

*Scatari Island*.—Signal agent part-time. Landline and telephone to Sydney.

*Flat Point*.—Signal agent part-time. Private telephone to Sydney.

*Point Tupper*.—Signal agent part-time. Landline to Sydney; ice reports to Canso.

*Sydney, C.B.*—The duties of signal agent are undertaken by Captain MacKenzie, Superintendent of Pilots, who, upon receipt of reports, analyses same and forwards to central offices at Halifax and Quebec as requisite.

*Halifax, N.S.*—This station is located at the citadel and maintains a continuous watch day and night and is in direct communication with Chebucto Head radio and signal station by a private telephone, which was installed during the present year. A summary of ships reported by the citadel station will be found at page 70 of this report.

*Chebucto Head*.—This station is situated at the entrance to Halifax harbour and reports the passing of all vessels to the signal station at the citadel. Two full-time signal agents are maintained for visual signalling. The direction-finding station situated at the same point reports all vessels communicated with by wireless, giving position and probable time of arrival. The station is organized for lamp signalling at night to vessels not fitted with wireless.

*Sambro Head Light Vessel*.—This lightship keeps a lookout and reports all passing vessels not fitted with wireless to Chebucto Head.

*Saint John, N.B.*—The signal station at Saint John is situated in the Customs building and is connected by telephone to the Red Head direction-finding station. Two full-time signal clerks are employed.

*Lurcher Lightship*.—Reports all ships spoken or sighted by wireless to Red Head, Saint John.

*Seal Island*.—A signal clerk part-time reports by wireless to Red Head, Saint John, all ships spoken or sighted.

*Partridge Island*.—Signal agent part-time. Telephone to Saint John, N.B.

*Point Lepreau*.—Signal agent part-time. Landline to Saint John, N.B.

PORT WARDENS' REPORTS FOR THE YEAR ENDED DECEMBER  
31, 1929

Reports were received from twelve port wardens: six from Nova Scotia port wardens, two from Quebec port wardens, and four from British Columbia port wardens.

The total amount of fees collected at the port of Montreal for the year ended December 31, 1929, amounted to \$21,667.18; at the port of Vancouver to \$23,510.50; at the port of Halifax to \$5,479; at the port of Quebec to \$2,316; and at the port of Victoria to \$1,666.

## PORT OF MONTREAL

April 10.—Government steamer *Lady Grey* arrived in port, reported channel clear between Quebec and Montreal. This was sixteen days earlier than last year.

April 15—SS. *Miron L* arrived, the first vessel this season to report at this office, eleven days earlier than last year. Wintered at Quebec.

April 20—Italian ss. *Amaranto* was the first vessel from overseas. Docked six and a half days earlier than last season. This same vessel received on April 22 the first certificate of readiness to load a full grain cargo, fifteen days earlier than 1928.

April 27—R.M.S. *Duchess of York* arrived, the first overseas passenger liner to arrive, same date as last year.

May 2—R.M.S. *Montclare* first passenger overseas vessel sailed two days later than 1928.

November 29.—R.M.S. *Megantic* sailed for Liverpool, the last of the passenger sailings for this season, same date as 1928.

December 3—SS. *Hochelaga* sailed for overseas, the last full grain vessel loaded at Montreal, two days later than 1928.

December 5—SS. *Lord Downshire* arrived from Quebec in ballast to load full general cargo, the last arrival for this season, one day later than 1928.

December 7—SS. *Lord Downshire* with general cargo sailed for overseas, the last sailing overseas, one day earlier than season 1928. This vessel anchored off Sorel same evening and owing to weather conditions firstly and later owing to ice conditions was unable to proceed until December 18, with the assistance of the icebreaker ss. *Mikula*, proceeded and reached Quebec December 22.

## OVERSEAS VESSELS REPORTED

Vessels, 885; aggregate tonnage 3,912,195 tons, a decrease of 317 vessels and 768,871 tons as compared with the 1928 figures.

Of the total overseas vessels 616 were British, 130 being registered in Canada. Vessels of other nationalities 269.

## LOWER PORT VESSELS REPORTED

Vessels 365; aggregate tonnage 699,064 tons, a decrease of 26 vessels and 75,956 tons as compared with the 1928 figures.

## EXPORTS OF GRAIN

Exports of grain for 1929 amounted to 80,435,979 bushels against 202,575,931 bushels for 1928, a decrease of 122,139,952 bushels in 1929.

## CASUALTIES REPORTED BETWEEN MONTREAL AND QUEBEC

May 1—SS. *Hansa* grounded Richelieu, no damage.

May 14—SS. *Can. Seigneur* collided with barge 3 Rivers, barge damaged.

May 29—SS. *Aube* grounded at Cap Charles, no damage.

August 24—SS. *Finchley* fouled rock cutter at Cap à la Roche, no damage.

November 29—SS. *Kamir* grounded South channel, lake St. Peter, vessel lightened and apparently undamaged.

## SHIP CHANNEL

The water in the ship channel was well above the average of the last five years and no difficulty was experienced in completely loading the heavy draft vessels.

## BOARD OF STEAMBOAT INSPECTION

REPORT OF CHAIRMAN, FRANK McDONNELL, M.E.I.C.

## STAFF

I regret to report the death of Mr. S. Gruzelier, Steamship Inspector at the port of Montreal, on February 25, 1930.

To replace Mr. Fred Bridges, Steamship Inspector at the port of Montreal, who had left the Steamboat Inspection Service on his appointment to the position of Superintendent of the Government Shipyard at Sorel, Mr. C. C. McVey was appointed by Order in Council dated December 4, 1929. Mr. McVey took up his duties on January 1, 1930.

Mr. W. L. Robertson was appointed Steamship Inspector (Hulls and Equipment) at the port of Kingston to replace Mr. M. R. Davis (retired), by Order in Council, dated January 16, 1930. Mr. Robertson took up his duties on February 11, 1930.

## BOARD MEETINGS

Board meetings for the purpose of dealing with questions arising out of the administration of the regulations governing steamboat inspection, for considering the qualifications of candidates for the position of steamboat inspector, and for the approval of plans of hulls, machinery, boilers and equipment for use in ships coming under inspection, were held during the year.

## ENGINEER EXAMINATIONS

During the fiscal year 276 candidates for certificates of competency were granted certificates as marine engineers. In addition, 67 temporary engineer certificates were issued, also 31 certificates to motor engineers.

Appended will be found a list of the Steamboat Inspection staff during the fiscal year, also table showing the number of inspections made, fees collected, etc.

STEAMBOAT INSPECTION STAFF FOR THE DOMINION OF CANADA  
DURING THE FISCAL YEAR ENDED MARCH 31, 1930

## SENIOR STEAMSHIP INSPECTORS

Name of Inspector	Headquarters	Division
N. A. Currie.....	Halifax, N.S.....	Nova Scotia.
P. W. Lyon.....	Toronto, Ont.....	Western Ontario—Toronto, Col- lingwood and Midland.
H. G. Robinson.....	Vancouver, B.C.....	British Columbia.

## INSPECTORS ACTING IN DUAL CAPACITY

A. I. Ross.....	Halifax, N.S.....	Nova Scotia.
S. J. Hill.....	Halifax, N.S.....	Nova Scotia.
C. E. Dalton.....	Saint John, N.B.....	New Brunswick and Prince Edward Island.

## APPROPRIATION AND EXPENDITURE

The parliamentary appropriation for the Marine Department for the fiscal year 1929-30 was \$14,853,669.47; the expenditure, \$12,067,659.89; leaving an unexpended balance for the department of \$2,786,009.58.

## CORRESPONDENCE

The number of letters received during the fiscal year 1929-30 was 176,897.

The number of letters sent out during the fiscal year 1929-30 was 95,329.

The above includes radio and hydrographic correspondence, which, until recently, have been recorded in the Fisheries Record Branch.

## NEW LEGISLATION

During the parliamentary session of 1930, new legislation affecting the department was enacted as follows:—

20-21 George V, Chapter 31.—An Act respecting the Department of Marine; assented to May 30, 1930.

A. JOHNSTON,  
*Deputy Minister of Marine.*

## DEPUTY MINISTER'S REPORT

To the Hon. E. N. RHODES,  
Minister of Fisheries.

SIR,—I have the honour to submit the Sixty-third Annual Report of the Fisheries Branch of the former Department of Marine and Fisheries, which is for the fiscal year ended March 31, 1930, and deals with the following subjects:—

- Fisheries Operations in the Calendar Year 1929.
- Foreign Trade in Fisheries Products.
- Operation of the Fish Inspection Act.
- Inspection of Canneries and Canned Fish.
- Work of the Marine Biological Board.
- Fish Culture.
- Fish Collection Services.
- Fisheries Intelligence Service.
- Scallop Investigations.
- Oyster Investigations in Prince Edward Island.
- Organization of Fishermen.
- Meetings of Fisheries Officers.
- Fishing Bounty.
- Pacific Coast Salmon Tagging.
- Work of the North American Committee on Fishery Investigations.
- Work of the International Fisheries Commission, or Pacific Halibut Commission.
- The International Pacific Salmon Federation.
- The Pelagic Sealing Treaty.

The appendices to the report include:—

- Reports of the Supervisors of Fisheries.
- The Report of the Biological Board of Canada.
- The Report of the Fish Culture Division.
- The Report of the Fisheries Engineer.
- Reports on Scallop Investigations.
- The Report on Oyster Investigations.
- A Statement of Fisheries Expenditure and Revenue for 1929, and a Statement of Fisheries Expenditure and Revenue, by provinces, for the period 1867-1929.
- A Summary of Licences Issued in 1929.
- A Return Showing Prosecutions for Offences against the Fisheries Act.
- A Statement Showing the Entries of United States Fishing Vessels on the Atlantic Coast and on the Pacific Coast.

There is also included a series of graphs showing the production of various principal fishes, by years, in the period from 1912 to 1929, inclusive.

### REVIEW OF THE FISHERIES OF 1929

During the calendar year 1929 there were larger catches of fish both on the Atlantic coast and in the Inland Fisheries but Pacific coast landings decreased by more than 80,000,000 pounds and as much of this decrease was in the salmon fishery the net result of the year's fisheries operations in the Dominion as a whole was that the marketed value of the production was about \$1,500,000 less than in 1928, or \$53,518,521 as compared with \$55,050,973.

Making comparison with 1927, however, there was an increase in 1929 of almost \$4,395,000 in marketed value, and it is also to be noted that the total for the year was more than \$2,900,000 above the average annual value in the preceding five-year period, 1924-1928. While the net decrease in total catch for the year was more than 63,000,000 pounds as compared with the catch for 1928, the average price per hundredweight received by the fishermen for their fish as landed was slightly better in 1929 than in the preceding year, taking the fisheries as a whole, and the landed value figures showed a decrease of only \$48,960, or \$33,699,543, as compared with \$33,748,503.

The sea fisheries production for the year amounted in marketed value to \$44,928,742, as against \$46,669,222 in 1928, but in the Inland Fisheries production, which totalled \$8,589,779, there was an increase of \$208,028. In New Brunswick, Manitoba, Prince Edward Island, Saskatchewan, and Alberta the marketed values showed gains but in British Columbia, Nova Scotia, Ontario, Quebec, and the Yukon Territory there were decreases.

Notwithstanding the decrease in its production, British Columbia continued well in the lead among the provinces in point of marketed value. Forty-five per cent of the production value for the Dominion for the year is to be credited to British Columbia, thirty-five per cent to the Maritime Provinces, eight per cent to the Prairie Provinces and the Yukon Territory combined, seven per cent to Ontario, and five per cent to Quebec.

On the Atlantic coast the total catch for the year was 536,193,900 pounds as compared with only 521,571,400 pounds in 1928. In Quebec alone among the four provinces of the coast was there a decrease in landings. In the Inland Fisheries the landings were 87,772,600 pounds, or about 2,000,000 pounds more than in 1928. On the other hand, the Pacific coast catch was only 526,127,400 pounds, as against 606,610,000 pounds in the preceding year.

*Capital Investment.*—The figures as to the amount of capital in use in the fishing industry in 1929 bear out the statement which was made in last year's report that "while there was some increase in the capital investment in the industry in 1928, the indications are that there will be a further increase in the ensuing years." During 1929 the total investment increased by more than \$4,000,000 and reached the sum of \$62,336,057. The greater part of the increase, or \$2,710,914, was in the capital invested in vessels and boats and gear used in the primary operations of catching and landing fish, and the total amount so invested reached \$33,842,002. The investment in fish canning and curing establishments was increased by \$1,552,772, notwithstanding that there was some decrease in the number of lobster and salmon canneries and in the number of reduction plants.

The growth in capital investment in the industry in recent years has been very striking. In 1910 the investment was slightly more than \$19,000,000. By 1914 it had become nearly \$25,000,000. During the war years, of course, there was some temporary employment of capital which swelled the figures abnormally, and for several years after the war's end there was a measure of recession. By 1922, however, conditions were returning to normal. In that year the investment in the industry was \$47,765,000, in round figures. In 1924 there was a sharp decrease but this change was followed in the next year by a renewed upward movement. This movement is apparently now continuing, and there is reasonable prospect of a further increase in investment during 1930, as is shown by the fact that on parts of the Atlantic coast, for instance, the activity in boat construction which was evident in the winter of 1928-29 has again been manifest during the present winter.

*Personnel.*—The year saw an increase of 2,154 in the number of persons directly employed in the fishing industry, and, all told, 80,373 were so engaged, as compared with 78,219 in the earlier year. Reckoning on the basis of an average of five dependents to each person employed in the industry, it will be

seen that the fisheries are a source of livelihood or maintenance for a number of people almost equal to the estimated population of the province of New Brunswick. Of the total personnel engaged in the industry last year 64,083 were men in primary operations, as compared with 62,785 in 1928, and 16,290 were persons employed in fish canning and curing establishments, an increase of more than 800 over the figures for the previous year.

*Foreign Trade.*—Export trade in fish and fish products in 1929 was not quite as large as in 1928—\$37,546,393, as compared with \$38,096,245—but it exceeded import trade by \$33,312,487. The value of fisheries imports was greater by some \$165,000 than it had been in 1928. Canadian fish and fish products continue to find sale in virtually all parts of the world but the major business is done with the United States in fresh and frozen fish.

*Major Fisheries.*—Notwithstanding that salmon fishing operations in British Columbia, the great salmon producing province, were less successful in 1929 than they had been in 1928, the salmon fishery ranked first in importance during the year from the standpoint of marketed return. In marketed value the products of the fishery were worth \$15,008,825. This total was nearly \$3,000,000 under the figures for the preceding year but was approximately equal to the 1927 total. The positions of the lobster and cod fisheries in the table of relative importance from the standpoint of marketed value were reversed in 1929 as compared with 1928. In the earlier year the cod fishery ranked second to the salmon fishery and the lobster fishery was third in importance. In 1929, however, the lobster fishery came into second place, with marketed value figures of \$5,696,542, or an increase of something more than \$512,000, and the cod fishery was third with a value of \$5,394,636, as compared with \$6,285,777 in 1928. Halibut marketed value was \$4,832,296, a gratifying increase of more than a million dollars. In the case of herring the marketed value of \$3,186,669 represented an increase of some \$80,000. The catch in the pilchard fishery, which is carried on in British Columbia only and has become of rapidly increasing importance with the growing utilization of the fish in producing fish meal and oil, was larger than it had been in 1928 but, in many cases, the oil content was not as great as it had been in the former year and the marketed value of the products of the fishery, \$2,199,834, showed a drop of some \$360,000. Whitefish continued the most valuable among the inland fishes and the landings had a marketed value of \$2,453,703, an increase of some \$260,000. As in 1928, the haddock, pickerel, sardine, smelt, and trout fisheries, respectively, yielded marketed returns of more than \$1,000,000.

Table I, below, shows the marketed value of the year's production by provincial totals as compared with the four preceding years. Table II shows the marketed value of Sea and Inland production by provinces for 1929.

## NOVA SCOTIA

Most of the Nova Scotia fisheries were more successful in 1929 than they had been in 1928 but the situation was otherwise in the cod fishery, and it was this latter condition which brought about a decrease in the value of the provincial fisheries production as a whole. At the same time, the production for the year, \$11,427,491, though \$254,504 less than the total for 1928, was some \$600,000 greater than the production for 1927. There were increases in catch and marketed value in the haddock, pollock, hake and cusk, halibut, herring, mackerel, salmon, lobster, alewives, and clam and quahaug fisheries. The decreases were in the cod, swordfish, scallop, and sole fisheries. Cod landings fell off by nearly 18,000,000 pounds and marketed value by more than \$900,000. Lower prices in the dried fish trade, as well as the reduction in catch, affected the cod production value adversely. The total catch of fish made by the Lunenburg fleet, which operates chiefly for the dried fish trade, was smaller by some 9,000,000 pounds than in 1928—62,610,000 pounds in 1929 as compared with 71,722,500 pounds.

## NEW BRUNSWICK

In 1928 there was an increase of nearly \$600,000 in the marketed value of New Brunswick's fisheries production, but 1929 saw even that success surpassed and the marketed value for the year was \$933,994 greater than the total for 1928, or \$5,935,635, as against \$5,001,641. The sea fisheries production was \$5,904,183, a gain of over \$930,000, and inland fisheries value of \$31,452 represented a gain of something more than \$3,000. The sardine fishery continued in first place, as regards marketed value of product, although there was a decrease in catch, with the lobster fishery in second place. Gains in these two fisheries and in the salmon, herring and the hake and cusk fisheries accounted, in major part, for the large increase in provincial marketed value. The pack of canned sardines, 329,204 cases, was greater by over 70,000 cases than the 1928 pack, and in marketed value there was an advance of over \$286,000. There was an increase of nearly 2,390,000 pounds in the lobster catch, which totalled 8,186,200 pounds, and the marketed value of the landings was \$1,361,796, as compared with about \$325,000 less than that in the previous year. There were very substantial increases in salmon and herring catches and value, and in the case of hake and cusk the catch increased largely and the marketed value, \$151,983, represented an increase of more than 100 per cent. There were increased returns from several other fisheries, such as the haddock and alewives fisheries, but the smelt, cod, pollock, mackerel, and shad fishermen did not fare so well as in 1928. Cod catch showed a decrease of some 3,000,000 pounds, and smelt landings a decrease of upwards of 900,000 pounds.

## PRINCE EDWARD ISLAND

Larger returns from the lobster fishery were the main factor in the increase in the value of Prince Edward Island production, which increased from \$1,195,577 in 1928 to \$1,297,125 in the year just past. The lobster catch of 7,359,000 pounds was nearly 798,000 pounds above the 1928 figures, and in marketed value, \$813,206, there was a gain of some \$61,000. There was also a gain of over 1,400,000 pounds in the landings of hake and cusk, with an increase of \$20,379 in value, while the cod production was greater by some 1,300,000 pounds in catch and by nearly \$21,000 in value than it had been in the preceding year. There was an increase in oyster landings and oyster value, and an increase in mackerel value though a decrease in catch. The smelt fishery was less successful than in 1928.

## QUEBEC

The decrease in marketed value in the case of Quebec's production was chargeable to the Inland Fisheries. Sea Fisheries production value, \$2,369,251, was \$119,673 greater than the 1928 total but in the Inland Fisheries the marketed value was only \$564,088, as compared with \$742,357 in the year previous. Taking the fisheries as a whole there was, thus, a net decrease of \$58,596 in the marketed value for 1929. In the sea fisheries there were gains in value in the case of cod, herring, smelt, and salmon, among the more important fishes, but the mackerel and lobster fisheries yielded smaller returns than in 1928. The increase in salmon value was particularly noteworthy, the total standing at \$137,144 as against only \$88,352 for the year before. Increasing trade is being done by Quebec in fresh salmon. In the inland fisheries the pickerel catch was less than half as large as in 1928, and the catch of eels also fell off to much the same extent, and these decreases explain by far the greater part of the drop in the value of the production from inland waters.

## MANITOBA

Manitoba continued its fisheries progress during the year. Catch increased, and marketed value went \$504,891 beyond the 1928 total, reaching \$2,745,205. Whitefish catch was worth nearly \$617,000, a substantial gain. Tullibee landings decreased but marketed value \$585,350 increased by \$103,000, in round figures. Trout catch and value more than doubled. In the case of both the pickerel and goldeye fisheries the value returns were greater than in 1928, although the pickerel catch was smaller.

## SASKATCHEWAN

In Saskatchewan there was a decrease of some 77,000 pounds in total catch but, nevertheless, the marketed return was greater by \$9,338. The pike, pickerel, mullet, and goldeye catches were all somewhat smaller than in the year before but there were larger landings of trout, tullibee, and whitefish. All told, more than 4,593,000 pounds of whitefish were taken, an increase of 226,000 pounds, and the marketed value total of \$461,348 was \$22,000 and more above the 1928 figures.

## ALBERTA

Trout landings in Alberta again showed a substantial increase in 1929 and this condition was the main factor in bringing about an increase in the value of the production from provincial waters. The catch of trout was approximately 2,350,000 pounds, as compared with 1,937,100 pounds in 1928 and the marketed value of \$235,391 represented a gain of about \$13,000. Whitefish catch increased slightly but fell off in marketed value. Pike and tullibee catches were larger than in 1928 but there were decreases in the case of pickerel and perch.

## BRITISH COLUMBIA

Much smaller runs of pink and chum salmon than had occurred in 1928 combined with bad weather conditions in some parts of the province led to a large decrease in the salmon landings in British Columbia and a drop of more than \$3,000,000 in the marketed value of salmon production. In 1928 the salmon catch totalled 225,745,500 pounds and the marketed value of the fish was \$17,345,670, but in 1929 the catch fell to 151,403,800 pounds and the value to \$14,265,795. It is to be remembered, however, that 1928 was one of the three most successful years in the history of the British Columbia salmon industry, and the 1929 value total, though less than that of 1928, was slightly larger than the figures for 1927. There was also a large decrease in herring catch and value in 1929 and though the pilchard landings went above the 1928 catch the marketed value showed a decrease. On the other hand, the return from the halibut fishery showed betterment. The gain in catch was small but the production value was \$4,317,235 as against \$3,370,670 in 1928.

## YUKON TERRITORY

Production value in the Yukon Territory in 1929 was less than half what it had been in 1928, or \$24,805 as compared with \$51,665, but 1928 was an exceptional year in the fisheries of the territory and it was scarcely to be expected that the returns from fishing operations would continue steadily on the high level which was then reached. Moreover, it is to be noted that while the marketed value of the catch for 1929 was much less than the value for the preceding year it was double the figures for 1927.

## ATLANTIC COAST RESULTS

In the four Atlantic coast provinces—Nova Scotia, New Brunswick, Prince Edward Island, and Quebec—the year's catch of sea fish was 536,193,900 pounds with a marketed value of \$20,998,050—a gain of 14,200,000 pounds in catch, roundly stated, and of over \$890,000 in value. There were increased landings everywhere, except in Quebec, and the catch figures by provinces were as follows:—

	Pounds
Nova Scotia.....	274,906,400
New Brunswick.....	156,186,200
Quebec.....	80,760,900
Prince Edward Island.....	24,340,400

*Cod, Haddock, Hake and Cusk, and Pollock.*—Taking the coast as a whole, there were larger catches of haddock and of hake and cusk in 1929 than there had been in the previous year but smaller landings of cod and pollock. The net result was that the total landings of the fish in this group was only 291,763,200 pounds, as compared with 294,942,000 pounds in 1928. Marketed value decreased from \$8,493,938 in 1928 to \$7,945,532.

The decline in cod fishery returns was general, except in Prince Edward Island. All told, the catch was 197,883,200 pounds, as against 214,982,200 pounds in the year before; marketed value was \$5,391,627, as compared with \$6,284,284. The major cod production is in Nova Scotia and the catch for that province for the year was 129,784,100 pounds, while in 1928 it had been 147,017,200 pounds.

In the haddock fishery there was a gain in the case of Nova Scotia, the big producer, and in the case of Prince Edward Island, while New Brunswick and Quebec productions decreased. The total catch was 54,540,900 pounds, with Nova Scotia accounting for 51,614,900 pounds. The Prince Edward Island increase was relatively large but the total landings for the province were only 175,900 pounds. New Brunswick's catch of 2,750,100 pounds was slightly smaller than a year ago. No haddock were taken by Quebec fishermen,

although in 1928 they landed upwards of 600,000 pounds. So far as marketed value is concerned, there was an increase of about \$217,000 on the coast as a whole, with the 1929 total reaching \$1,951,642.

There were large increases in hake and cusk catch in all three of the Maritime Provinces but Quebec, which had a catch of some 380,000 pounds in 1928, made no landings last year. The combined catch for Nova Scotia, New Brunswick, and Prince Edward Island was 33,912,200 pounds, a gain of 8,600,000 pounds and more, and marketed value of \$517,296 represented an increase of nearly \$150,000.

Pollock are taken only by Nova Scotia and New Brunswick fishermen, and while the Nova Scotia men were considerably more successful in 1929 than they had been in the preceding year the case was quite otherwise with the fishermen of the other province. In 1928 the New Brunswick catch of pollock was more than 3,411,000 pounds, with a marketed value of \$55,297, but in 1929 the catch fell away very sharply and amounted only to 846,600 pounds with a marketed value of \$15,998. Nova Scotia's catch, valued on the market at \$68,969, was 4,571,300 pounds, or an increase of over 1,500,000 pounds.

There was a production of smoked fish and smoked fillets from this group of fish totalling 10,453,100 pounds, which was somewhat less than for the preceding year when 11,132,700 pounds were cured in this manner. The quantity of fish marketed fresh and in the fresh fillet form also fell off considerably, and was only 34,282,100 pounds, as compared with 37,904,800 pounds in 1928. There were 54,997,400 pounds of dried and boneless produced while in the year previous 57,468,200 pounds were processed in this form.

*Herring, Mackerel, and Sardines.*—In 1928 the combined landings of herring, mackerel, and sardines were greater by more than 5,000,000 pounds than they had been in 1927, and 1929 saw a further increase of 10,000,000 pounds and more, or a total of 159,872,100 pounds. Marketed value for the year was \$3,538,095, a gain of some \$650,000. Herring and mackerel increased both in catch and value and though the sardine catch of 49,838,800 pounds—virtually all to be credited to New Brunswick—was smaller by 7,359,000 pounds than the 1928 catch, it had a value of \$1,626,764 as against only \$1,291,722 in the previous year. The pack of canned sardines, valued at \$1,319,584, was 329,204 cases, or an increase of 71,323.

In the mackerel fishery there were smaller landings in New Brunswick, Prince Edward Island, and Quebec than there had been in 1928, but in Nova Scotia the catch increased heavily. The latter gain more than offset the decreases elsewhere and the total mackerel catch for the coast was 15,275,600 pounds, or about 2,800,000 pounds more than in the earlier year.

Except in the case of Quebec, there were increased herring catches—large increases in New Brunswick and Nova Scotia and a smaller gain in Prince Edward Island. Combined, the catches for the four provinces were 94,757,700 pounds with a marketed value of \$1,375,310, as compared with a total landing of 80,094,300 pounds and a value of \$1,060,840 in 1928.

*Flounders, Halibut, Swordfish.*—Flounder fishing, which is carried on in Nova Scotia and New Brunswick only, yielded a total catch of 462,600 pounds, a gain of 115,000 pounds, and the marketed return was \$19,243, as against \$14,304 in 1928. The increase in catch was in Nova Scotia. The halibut fishery is prosecuted chiefly in Nova Scotia waters where the landings for the year were 3,097,100 pounds, an increase of half a million pounds. In Quebec the catch was 73,300 pounds, or a drop of 53,600 pounds. The New Brunswick fishermen tripled their catch but their total landings were slightly less than 20,000 pounds. Halibut are not often taken in Prince Edward Island waters.

Swordfishing, carried on in Nova Scotia only, was less successful than in 1928. The catch was 633,600 pounds, a decrease of 175,000 pounds, and marketed value \$98,241 as compared with \$132,345.

*River Spawning Fish.*—The catch of alewives showed a large increase, there was a substantial increase in the salmon catch, and the smelt catch decreased considerably. Similarly, there were gains in marketed value in the case of the first two varieties of fish and there was a decrease in the case of smelts. By fisheries the year's results were as follows:—

	Alewives	Salmon	Smelts
	lbs.	lbs.	lbs.
Catch.....	6,741,800	3,528,700	7,463,000
Marketed value.....	\$121,938	\$710,315	\$1,112,066

New Brunswick and Nova Scotia are the principal producers of alewives. The New Brunswick catch increased greatly and the Nova Scotia catch doubled. In the smelt fishery there was a decrease in the landings in New Brunswick, the largest producer, and a decrease also in Prince Edward Island. In Nova Scotia there was an increase, and the Quebec catch of 693,400 pounds was more than double the 1928 total for the province. Salmon catch increased in all the provinces except Prince Edward Island, where the landings are never large. In New Brunswick the catch was 1,765,000 pounds, as compared with 1,220,900 pounds in 1928; in Quebec it was 1,005,400 pounds, as compared with 739,200 pounds; and in Nova Scotia 755,600 pounds, as compared with 705,900 pounds.

*Lobsters.*—The total catch of lobsters for the four Atlantic provinces was 37,282,000 pounds, or an increase of more than 5,000,000 pounds over the catch for the preceding year. The marketed value was \$5,696,542, or \$642,000 greater than in the previous year, placing the lobster industry second value of return among the Canadian fisheries in 1929.

The following tables show the lobster catch, by provinces, for 1929, 1928 and 1927, the forms in which the catch was marketed in each year, and the marketed values:—

## CATCH

	1929		1928		1927	
	Cwt.	Marketed value	Cwt.	Marketed value	Cwt.	Marketed value
		\$		\$		\$
Nova Scotia.....	190,035	3,210,504	172,409	3,048,255	179,673	3,255,627

Totals.....	4,516	50,904	4,867	58,894	3,549	45,445

*Other Shellfish.*—There was an increase of 3,000 barrels in the quantity of clams and quahaugs taken, 49,482 barrels being landed all told. The production in New Brunswick, where the greatest quantities are taken, fell off somewhat but in Nova Scotia the landings were more than 3,000 barrels greater than in the previous year. In Prince Edward Island the quantity was 4,275 barrels, or nearly double that of the previous year. Quebec showed decreased landings. There were fewer scallops taken, however, the total landings of 17,921 barrels being less than that of the previous year by nearly 8,400 barrels. There were almost 1,700 barrels more of oysters landed than in 1928, the total for 1929 amounting to 20,734 barrels. Oyster production showed an increase in New Brunswick and Prince Edward Island and a slight drop in Nova Scotia.

## INLAND FISHERIES

The quantity of fish taken in the Inland Fisheries—that is, from the fresh water areas of New Brunswick, Quebec, Ontario, the Prairie Provinces, and the Yukon Territory—was considerably greater in 1929 than in the previous year. Similarly, there was an increase of some \$200,000 in marketed value, and as compared with the value total for 1927 there was an increase of over \$1,000,000. In 1927 the marketed value of the inland fisheries production was \$7,575,912, in 1928 it was \$8,381,751, and last year it reached \$8,589,779, a record figure.

The catches of the principal varieties of fish taken in the inland waters in 1929 are shown in the following table, together with the catches made in 1928 and 1927, respectively:—

	1929	1928	1927
	lbs.	lbs.	lbs.
Whitefish.....	19,638,600	18,069,500	18,566,400
Pickeral (or dore).....	12,850,000	14,261,000	14,001,900
Tullibee.....	9,766,900	10,414,500	12,176,400
Trout.....	9,065,600	9,007,500	8,990,400
Pike.....	8,254,600	6,270,100	7,047,300
Herring.....	5,456,200	5,999,300	6,320,100
Perch.....	6,482,700	5,175,100	3,318,900
Eels.....	1,265,700	2,324,000	1,455,200
Blue pickerel.....	2,583,100	2,149,600	3,117,300
Mullets.....	1,992,600	1,606,500	1,590,600
Carp.....	1,345,100	1,349,700	1,275,800
Goldeyes.....	1,115,100	1,071,300	1,148,500

So far as other varieties of fish are concerned, it may be noted that there were larger catches of alewives, bass, maskinonge, saugers, shad, and sturgeon than in 1928 but smaller landings of catfish, salmon and smelts.

Ontario was the largest producer of whitefish, with landings totalling 6,159,000 pounds, in round figures, or about 325,000 pounds more than in the preceding year. The whitefish catches in the three Prairie Provinces were also larger, in each case, than in 1928.

Manitoba continued the largest producer of pickerel, although the catch in the province was somewhat under the figures for 1928—9,405,500 pounds in 1929 as compared with 10,187,000 pounds. The Ontario catch, 1,989,000 pounds, was smaller than in 1928. The Saskatchewan catch, 283,500 pounds, and Alberta's catch, 811,500 pounds, also showed some decrease.

Pike were landed in largest quantity in Manitoba and the catch of 5,491,000 pounds exceeded the 1928 landings by some 1,800,000 pounds. There were also larger landings in Quebec, Ontario, and Alberta, but a decrease in Saskatchewan.

#### THE PRAIRIE PROVINCES

Expansion of production in the Prairie Provinces was again noteworthy in the Inland Fisheries during the year. All told the Prairie Province production had a marketed value of \$4,050,290, or over half a million dollars more than in 1928. This was the first year in which Prairie Province production had passed the \$4,000,000 mark, and it is also to be noted with satisfaction that since 1924 there has been an increase of nearly 100 per cent in the marketed value of fisheries production in this part of Canada. The 1929 marketed value for Manitoba alone, \$2,745,205, was greater by nearly \$700,000 than the total for the three provinces in 1924. It is in Manitoba, of course, that the greatest fisheries expansion has been taking place, but there has been steady progress in Saskatchewan and Alberta as well. In 1929 Saskatchewan's catch had a marketed value of \$572,871, a gain of a little more than \$9,300 over the figures for 1928, and in Alberta marketed value was \$732,214, an increase of approximately \$7,100 over the total for the preceding year.

The trend toward further expansion, which was indicated by increase in equipment in the three provinces in 1928, was again shown in the same way in 1929, as well as by enlargement of personnel. Capital investment and number of employees was greater in the case of each province than it had been in the year before. Total capital investment in the three provinces was \$1,986,036, a gain of \$396,335, and the number of employees rose from 6,657 in 1928 to 7,516. Expansion in commercial fisheries operations in these western provinces has been very noteworthy in recent years and there is encouraging promise of further steady development as new fishing waters are made accessible to the fishermen by advancing settlement and railway extension.

As in 1928, there was an increased interest in angling apparent in 1929 in all three provinces. In Alberta, for instance, where a new high level in the number of angling permits was reached in the earlier year, there was a large further increase in 1929. In Manitoba the number of licences sought by non-resident anglers almost doubled, totalling 2,039, as compared with 1,113 in the previous year. In Saskatchewan there was also a considerable increase in the number of anglers. Beneficial results from fish cultural operations of the department were observable in several parts of the provinces where anglers found excellent fishing in waters, previously lacking in sport fish or possessing limited resources, which were stocked with fry several years ago.

In Manitoba considerable interest attached to the operations of the "Fish Pool," which was incorporated in 1928 under the Manitoba Co-operative Societies Act as the Manitoba Co-operative Fisheries. The pool completed its first year of operations in August, having handled a total of 9,996,131 pounds of fish which were received from 477 pool members and 200 non-members.

## PACIFIC COAST FISHERIES

In British Columbia the sharp drops in the catches of pinks and chums, which have already been noted, had the effect of reducing the pack of canned salmon very materially and the total production was only 1,398,857 cases, as compared with 2,035,637 cases in 1928. It is to be remembered, however, that the runs of pinks and chums in 1928 were exceptionally large and record making quantities of each of these two varieties of salmon were canned. The 1929 pack of pinks, 477,969 cases, was 314,000 cases smaller than the 1928 pack and canned chum production, 424,982 cases, was less than half the size of the pack for the preceding year. On the other hand, the pack of sockeye was more than 77,000 cases larger than in 1928 and totalled 281,306 cases, while a pack of 174,198 cases of cohoes and a pack of 19,377 cases of springs both represented gains, although in marketing springs and cohoes the trend is toward their increasing use in the trade in fresh and frozen fish.

Two developments of interest in connection with the salmon runs were the migration of a relatively large number of sockeye to the upper spawning areas of the Fraser River system in the earlier part of the season and the showing of pinks in the Skeena and Central divisions. The early run of sockeye to the Fraser, fish unexcelled for canning purposes, had been practically negligible since 1917. When the run appeared in 1929 it took the fishermen largely by surprise with the result that many of the fish were able to reach the spawning areas, which are consequently believed to have been well seeded. In the case of pink runs to the Skeena and Central divisions there was some apprehension caused in 1927 when the runs were unprecedentedly light. It was felt that the small number of fish, coupled with unfavourable conditions then existing as to height of water in streams containing the spawning grounds, might make doubtful the future runs in these divisions. In order to meet the situation as far as possible drastic conservation steps were taken during the 1927 season, and apparently with effectiveness as both in the Skeena and the Central areas in 1929 the indications were that the spawning grounds were at least reasonably well seeded.

In the canned salmon export markets Australasia was British Columbia's largest customer in 1929. Australasian purchases amounted nearly to 308,000 cases. Purchases by France totalled over 251,000 cases and by the United Kingdom over 194,000. In addition to the shipments to France, over 275,000 cases were sold in continental Europe, and of this quantity Italy took nearly half. Some 43,000 cases went to South Africa and West Africa. Over 23,000 cases were exported to the Atlantic coast of the United States. Altogether, upwards of thirty countries imported British Columbia canned salmon during the year.

In the pilchard industry, which of late years has become one of the chief fisheries enterprises of the Pacific coast, a feature of the 1929 season was a relatively large increase in the output of the canned product which rose from a little more than 65,000 cases in 1928 to 98,821 cases. Production of meal and fertilizer from pilchards, 15,826 tons, was slightly larger than in the previous year, but on the other hand, there was a substantial decrease in the output of pilchard oil. Over 3,995,000 gallons of this oil were manufactured in 1928, but in the past year the quantity was only 2,856,579 gallons. The decrease was not due to diminished operations, but rather to the fact that the 1929 run of fish were generally less oily than those taken in the earlier year.

The total production of fish oil of all kinds in the province during the year was 4,066,015 gallons, as compared with some 5,047,000 gallons in 1928. In the case of fish meal and fertilizer, the total production was 21,084 tons (the figures including some whalebone), which was slightly more than the 1928 quantity.

The quantity of dry-salted herring produced, approximately 92,385,000 pounds, was nearly 15,000,000 pounds under the total for the year before but, none the less, had only four times been exceeded in the history of the industry. Practically the entire pack of dry-salted herring is exported to the Orient where British Columbia producers have built up a large trade in recent years.

The landings of halibut amounted to 30,436,400 pounds, exceeding the total for 1928 by 1,500,000 pounds. Whaling operations were more successful than they had been in 1928 and 407 whales were killed, as compared with 305 in the earlier year. Fur seals to the number of 3,347 were taken by Indians, the only persons by whom these seals may be killed under the terms of the Pelagic Sealing Treaty, as against 2,090 in 1928.

### FOREIGN TRADE IN FISHERIES PRODUCTS

Returns compiled by the External Trade Branch of the Bureau of Statistics show that Canada exported fish and fish products to the value of \$37,546,393 in the calendar year 1929 and imported like products having a value of \$4,233,906. The balance of trade in Canada's favour was thus \$33,312,487.

Sales to the United States (\$16,750,543) and the United Kingdom (\$3,693,615) accounted, all told, for more than half of the export business during the year, but it may be said that the Dominion marketed fisheries products in virtually all the world. Every continent was a purchaser of products from Canada's fisheries. Canned salmon was marketed in some thirty different countries. Canadian dried fish found sale in large quantities in more than twenty foreign markets, although it may be pointed out in passing that there is increasing competition from Iceland and Norway in certain important marketing areas. Canadian canned sardines were exported to upwards of twenty lands. Fresh and frozen fish was marketed in the United States, in the United Kingdom, in Germany, and in France, and in larger total than before. Canadian export trade in the products of the fisheries has increased with great rapidity in recent years and with the further expansion of operations that is now in progress, and the widening application of new and improved methods of handling fish which the department and the Biological Board have been assisting to develop, continued increase may be expected with reasonable confidence.

Exports of canned or preserved fish had a value in 1929 of nearly \$13,260,000, or, in other words, they represented more than one-third of the total value of the year's fisheries exportation. The principal items under this head were: Canned salmon, slightly more than \$8,865,000; canned lobsters, \$3,113,630; and canned sardines, a little more than \$578,000.

Sales of fresh and frozen fish amounted nearly to \$11,725,000. United States purchases went beyond the eleven million dollar mark. The remaining sales were made in the United Kingdom and in continental Europe.

The exports of dried, salted, smoked, and pickled fish had a total value of over \$9,979,000, cod and haddock accounting for well over half the sum. An interesting item under this head shows exportations to the Orient of dry-salted herring, having a value of \$1,948,556. Development of this export trade in dry-salted herring, a British Columbia undertaking, has been of comparatively recent origin but the annual sales to Oriental markets have reached a place of first-rate importance. Another important development in export trade has been the upbuilding of a large business in fish meal, and in 1929 the sales of this commodity abroad had a value of over \$826,000.

Fisheries importations in 1929 came chiefly from the United States and from Newfoundland, although there was also import trade with the United Kingdom amounting to slightly less than \$245,000. As is shown by the figures already cited, however, the value of the exports from Canada during the year was nearly nine times as great as the value of the products imported. The

purchases from the United States, including Alaska, amounted in value to \$1,437,697. Of this amount, nearly one-third was accounted for by the importation of oysters, which Canada does not produce in sufficient quantity to meet the demand. The purchases of Newfoundland fish had a value of \$822,927 but they included very considerable quantities of fish and lobsters which were brought in mainly for purposes of re-export. These latter importations included dried fish having a value of \$178,000, in round figures, canned lobsters valued at slightly more than \$107,000, and approximately \$145,000 worth of wet-salted fish which was further processed in Canada. The larger items in the imports from the United Kingdom were pickled, canned, and smoked herring, which represented, in value, more than half the total purchases made from the Old Country. There was also importation of herring in various forms from the United States and Newfoundland. For the most part, importations of this kind could be displaced by Canadian herring which are fully equal in quality to imported fish. Save in the exceptional case, indeed, there is no reason for the purchase of any imported fish. Canadian fisheries products are not surpassed anywhere and they are obtainable in such variety that the supply is capable of meeting any demand of the domestic market.

### INSPECTION OF FISH, BARRELS, ETC.

The inspection of cured fish, the packages in which they are marketed, etc., is carried on under the Fish Inspection Act. Until the year 1922 pickled herring, mackerel, gaspereau and salmon and the containers for such only came under inspection. As the Act provides, however, that any kind of cured fish may, by Order in Council, be made subject to inspection, just as soon as the wisdom for taking such a step became apparent, the dry-salted herring trade between British Columbia and China was brought under the provisions of the Act in that year. With the approval of the packers in British Columbia, a code of regulations dealing with this branch of trade was prepared and put in effect in the fall of 1922. This trade, for some time had been struggling with a difficulty due to lack of uniformity in the curing of the fish, the size of the package and the weight of fish contained in each. The regulations now in effect have remedied these defects. With each lot of fish inspected and shipped a certificate of inspection is given to the shipper and the result has been stabilization of the business.

The large and important trade between Eastern Canada and the West Indies in smoked herring for some years appeared to be in danger from causes similar to those which threatened the dry-salted trade between British Columbia and China, that is lack of uniformity in size of packages in which the fish were packed and a gradual reduction in the recognized weight of fish each package should contain. In order to remove these disabling conditions and with a view to stabilizing the business, regulations were framed, in consultation with the producers of this commodity, in which were laid down standards for the curing and smoking of the fish, for the size of the packages and the weight of their contents. These were put in effect in 1923.

To enable inspecting officers to more definitely deal with the inspection and sale of standard barrels, authority was obtained in 1923 by Order in Council to permit of the inspection at the coopers' shops of all barrels intended for the packing and marketing of such fish as came under the provisions of the Act. The inspecting officers operated under this authority in 1924 for the first time with results that have gratified both the department and the trade.

Two years ago, the department, after consultation with the trade, established by law standards of size and quality for dry and salted cod, haddock, hake, cusk and pollock. This was done as a result of representations to the effect that there were no well defined standards on which sellers and buyers

of these fish could base just and reasonable prices. The same price is usually paid for fish that are not well cured as for fish that are well cured; consequently, fishermen who cure their own fish have no incentive to improve the quality of their cure.

The standards thus established have been incorporated in the regulations to the Fish Inspection Act. The department's inspectors of fish curing and packing have been empowered to carry out such inspections as may be required. Inspection is not compulsory. The purpose simply is, for the present, to provide a means of guarding alike the interests of the fisherman and the dealer, when the former agrees to sell and the latter to buy dry or green salted fish in accordance with the established standards, at a price conditional upon the fish at the time of delivery being such as the standards require. Both seller and buyer in that event have an opportunity of requesting the nearest fish inspection officer to inspect the fish in question and decide as to whether they are up to the standard agreed upon.

Last year the provisions of the Fish Inspection Act were extended to embrace the inspection of all fish curing establishments and places where fish are cleaned, salted, smoked or otherwise prepared for curing, with the exception of canneries, which are inspected under the Meat and Canned Foods Act, together with all utensils and equipment used in the process of cleaning, salting, smoking or otherwise curing of fish.

A comprehensive set of regulations has been framed to govern the inspection of such establishments, which became effective on the first of January this year.

Prior to the present year inspection of fish under the Fish Inspection Act has been carried out by a special staff of officers, which to some extent duplicated the regular departmental staff of fishery officers on the coast. With a view to putting a stop to this duplication, it was decided last year to place the duty of carrying out the provisions of the Fish Inspection Act in the hands of one staff of officers, namely the fishery overseers, with the title of fisheries inspectors. In order that they might be qualified to undertake this work, all the sea fishery officers on the Atlantic coast were given a six weeks' course of instruction by the staff of the Experimental Station of the Biological Board. At the end of the course a stiff qualifying examination paper was set. Most of the officers succeeded in qualifying either fully or provisionally and are now acting as inspectors of fish, etc. Owing to the greater number of officers thus available for this work and the smaller districts they will have to oversee, it is assured that the work of inspection will be more efficiently and more beneficially handled in future. Also the qualified officers are being gradually trained to instruct fishermen in improved methods of handling and curing their fish.

During the year 1929-30 there were inspected on the Atlantic coast 63,467 empty containers; 11,406 packages of salted mackerel; 34,064 packages of salted herring; 8,335 packages of salted alewives; 81 packages of salted salmon; 65,516 packages of smoked herring; and 120,222 pounds of salted codfish.

On the Pacific coast during the same year there were inspected 238,866 boxes containing 400 pounds each of dry salted herring for the oriental markets.

### INSPECTION OF CANNERIES

The inspection of fish canneries of all kinds throughout Canada, the raw material to be used therein, the whole process of canning, the canned product and the labelling and designating of such, are carried on by the ordinary fishery officers of the department under the provisions of the Meat and Canned Foods Act.

This inspection has for its object the extension of trade by improving the quality of the product and the protection of the public by preventing the packing of unsound fish and insisting on the correct labelling of all cans of fish. During the spring of 1922 it was discovered that the Act, as well as the regulations, which were amended in 1917 and 1919, contained several sections which were either burdensome to the trade or incapable of proper application. Officers of the department met the packers and discussed the whole Act and the regulations with them in order that amendments could be made to such an extent as was necessary for the proper protection of the packer, the consuming public and for the betterment of the industry. A series of amendments was finally agreed upon, made law and became effective at the beginning of the packing season of 1923.

For many years the preparation of the annual pack of canned lobsters caused loss to the trade owing to the discolouration of the meat which took place after it had been in the cans for some time. At the instigation of the Department, Dr. Harrison, of McGill University, endeavoured to find the cause of the discolouration. He discovered both the cause and the cure of it, and these were made known to the industry in a pamphlet in 1923. At the same time the department arranged with the Marine Biological Board to carry on a campaign of education amongst the canners with a view to eliminating causes of deterioration in the packing.

### MARINE BIOLOGICAL BOARD

The Biological Board acts as the Scientific Division of the Fisheries Branch and maintains five research stations, three of which are mainly concerned with the more purely scientific and fundamental problems, while the other two, known as Fisheries Experimental Stations, deal with problems arising in connection with the handling and preservation of fish.

Three of the stations are located on the Atlantic Coast, the Atlantic Biological Station at St. Andrews, N.B., the Eastern Passage Laboratory at the entrance to Halifax harbour, and the Atlantic Fisheries Experimental Station at Halifax. The other two are on the Pacific coast, the Pacific Biological Station at Nanaimo, B.C., and the Pacific Experimental Station at Prince Rupert, B.C. In addition a field station is located at Cultus Lake, B.C., for the study of the sockeye salmon, and by courtesy of the University of Manitoba laboratory facilities have been provided for carrying on investigations of the prairie lakes.

In connection with the St. Andrews station further experimental work was carried on in the production and sale of Ice Fillets of various kinds of fish. Amongst other things a biological survey of the waters of the Bay of Fundy was carried out; experiments to determine the significance of certain conditions of aquatic life; studies of the decomposition of fish; the food value of marine products; investigation of the oyster fisheries of Prince Edward Island with a view to developing rational cultural practice. In the Inland waters a study was made of fresh water shrimps with a view to their culture as fish food; a survey of the lakes and streams of Prince Albert national park with a view to the conservation and development of the fisheries there. An extensive study of the whitefish of the Manitoba lakes was completed.

At the Halifax station investigations of problems connected with refrigeration were continued. Experimental work in the smoking, salting and drying of fish was carried further forward. Experiments in the canning of brine frozen mackerel and of scallops were conducted as also an investigation of the presence

of small crystals in cans of lobster. The effect of freezing of fish livers on the production of oil meal was further investigated. Routine analysis of fish meal samples submitted by the industry were carried out.

A course of instruction of six weeks' duration was again given for fishermen. The fishery officers were also given a six weeks' course. The Halifax station staff also took a large part of the instruction given in connection with the Fisheries course at Dalhousie University; a member of the staff visited the lobster canneries at the Magdalen islands and gave demonstrations with respect to the importance of speed and cleanliness in canning procedure. An exhibit of brine freezing methods was made at the Provincial Exhibition at Halifax and at the Fisheries Exhibition at Lunenburg.

In connection with the Pacific Biological Station, Nanaimo, B.C., investigations with regard to the propagation of sockeye salmon at Cultus lake were continued and extended. Studies of the life-history and spawning habits of pink and chum salmon were made at the Queen Charlotte islands. The salmon tagging program to secure information as to the migration routes of the various kinds of Pacific salmon was continued. Studies of sockeye salmon scales were continued and a comprehensive investigation of the herring and pilchard was commenced. Studies of shrimps, clams, trout and ling-cod and of the physico-chemical and plankton conditions in the strait of Georgia were carried on. A two weeks' course of instruction was given by the station staff to superintendents of fish hatcheries.

At the Prince Rupert station further investigation of the discoloration of halibut was conducted. A bacteriological investigation of the storage of salmon in fishing vessels was begun and continued.

Experiments were conducted with a view to a greater use of fish oil for industrial purposes. The production of glue from waste liquors of fish meal plants was investigated. Researches are in progress for the purpose of developing methods for the production of fish meal at its optimum value in nutrition.

The composition of the board and its various committees during the year was as follows:—

- Prof. J. P. McMurrich, University of Toronto, Chairman.
- J. J. Cowie, Esq., Department of Fisheries, Secretary-treasurer.
- Prof. A. T. Cameron, University of Manitoba.
- Prof. C. J. Connolly, St. Francis Xavier University.
- Prof. P. Cox, University of New Brunswick.
- John Dybhavn, Esq., Prince Rupert, B.C.
- Prof. J. N. Gowanloch, Dalhousie University.
- Prof. A. Vachon, Laval University.
- Prof. A. H. Hutchinson, University of British Columbia.
- Prof. W. T. MacClement, Queen's University.
- Prof. Marie-Victorin, University of Montreal.
- Prof. E. E. Prince, Ottawa.
- J. A. Rodd, Esq., Department of Fisheries.
- Prof. W. P. Thompson, University of Saskatchewan.
- A. H. Whitman, Esq., Halifax.

Prof. A. Willey, McGill University.  
Prof. H. G. Perry, Acadia University.  
Dr. R. C. Wallace, University of Alberta.

The members of the board receive no pay, but are allowed travelling expenses in connection with the Board's work and its meetings.

The Central Executive Committee consisted of:—

Prof. J. P. McMurrich,  
Prof. W. T. MacClement,  
J. J. Cowie,  
Prof. E. E. Prince,  
Prof. A. Willey,  
Prof. Marie-Victorin.

The Atlantic Sub-Executive Committee consisted of:

A. Handfield Whitman, Chairman,  
Prof J. N. Gowanloch,  
Prof. C. J. Connolly.

The Pacific Sub-Executive Committee consisted of:

John Dybhavn, Chairman,  
Prof. A. H. Hutchinson,  
Prof. A. T. Cameron.

The Research Committee on Fish Culture consisted of:

Dr. A. G. Huntsman, Chairman,  
Dr. W. A. Clemens,  
Dr. A. H. Leim,  
Prof. A. T. Cameron,  
Mr. J. A. Rodd,  
Dr. R. E. Foerster, Secretary.

A detailed report on the work of the Board's staff during the year will be found in Appendix No. 2 of this publication.

## FISH CULTURE

The fish cultural operations of the department during the calendar year 1929 were devoted to the propagation of the more important fresh water and anadromous food and game fishes, including Atlantic and landlocked salmon, speckled, brown, Loch Leven and rainbow trout in the Maritime Provinces, whitefish, pickerel, cutthroat, rainbow, brown and Loch Leven trout in the Prairie Provinces, and Pacific salmon (principally sockeye), cutthroat, Kamloops, rainbow and speckled trout in British Columbia.

Facilities for retaining and feeding fry so as to afford a longer season for distribution were enlarged at several establishments where such development was

feasible. The total distribution for 1929 was over twenty-one per cent larger than it was in 1928, and almost twice as large as the distribution for 1927. The distribution for these years was:—

1927.....	295,283,782
1928.....	470,302,380
1929.....	570,771,626

Increases over 1928 in numbers distributed were made in rainbow, cut-throat, speckled and Kamloops trout, sockeye and spring salmon and whitefish. The bulk of the increase was in whitefish fry, distributed in the Prairie Provinces, which was increased from 129,183,026 in 1928 to 216,755,000 in 1929.

In addition to the distributions that were made from the hatcheries, twenty-eight lakes and streams received allotments of fingerlings and older fish by transfer from other bodies of water. This work was very largely confined to the Prairie Provinces where there are many districts which are not readily accessible to existing hatcheries, and which have many bodies of water of indifferent quality, in which the better class of fishes, such as are handled in our hatcheries, are not likely to live and thrive. This work involved the capture and transfer, in many instances for considerable distances, of 18,274 fish.

Examinations and inspections were continued with a view to locating waters where fish eggs might be obtained in sufficient quantities for hatchery purposes, and with a view to locating sites where the fish cultural service might be extended advantageously by the construction of new establishments in districts that are not readily accessible from existing hatcheries. As opportunity offered, the general inspection of waters throughout the country was continued by officers and employees of the fish cultural and fisheries services.

Various experiments and investigations with equipment, methods, etc., and in feeding fry and older fish different kinds of food and different combinations were conducted at several hatcheries.

Considerable progress was made in investigation of various problems relating to fish culture by the Biological Board and its sub-committees. A series of lectures under the direction of Dr. W. A. Clemens, Director of the Nanaimo Biological Station, were given to superintendents of hatcheries in British Columbia in July, 1929. The lectures were given at the University of British Columbia, which also generously supplied necessary laboratory material and equipment.

The fish cultural branch also participated with assortments of hatchery product in several exhibits for portraying natural resources. These exhibits were of considerable educational value and aroused great interest.

Gratifying reports regarding the results that are apparent from the distribution of hatchery products continued to accumulate from all districts where fish cultural operations are carried on. In many districts, local organizations, such as boards of trade, angling and protective associations, service clubs, as well as private individuals, have provided transportation and otherwise assisted in distribution work. In a few instances the necessary facilities were provided and allotments of eggs and fry that were made by the department were hatched or retained and fed for several months at the expense of the local organization but under the general supervision of the nearest fish cultural officer.

The Canadian National Railway, Canadian Pacific Railway, Dominion Atlantic Railway, Kettle Valley Railway and the Esquimalt and Nanaimo Railway Companies continued their generous assistance and co-operation by

furnishing free transportation for shipments of game fish and game fish eggs with their attendants. The extent of this co-operation is indicated in the following summary:—

Railways	Total mileage on trip passes	Number of passages	Mileage baggage car permit			Number cases or cans			Number of permits
			Full	Empty	Total	Full	Empty	Total	
C.N.R.....	21,105	181	11,144	10,201	21,345	882	873	1,755	164
C.P.R.....	18,017	100	10,041	9,831	19,872	479	480	959	119
D.A.R.....	412	4	206	206	412	12	17	29	4
K.V.R.....	771	6	546	250	796	9	6	15	7
E. & N.R.....	363	5	212	212	424	17	17	34	6
	40,668	296	22,149	20,700	42,849	1,399	1,393	2,792	300

NOTE.—Number of passages refers to transportation one way. A return trip counts as two passages. Number of permits refers to one-way passage for cases or cans, either by permit, special authority or free transportation without a permit form.

Thirty main hatcheries, ten subsidiary hatcheries, five salmon retaining ponds and several egg-collecting stations were in operation during the calendar year 1929. The output from these was 570,287,381, as shown by species in the following statement.

The following statement shows the output of different kinds distributed in the several provinces in which fish cultural operations are conducted by the federal Government:—

HATCHERY OUTPUT, BY PROVINCES, OF EGGS, FRY AND OLDER FISH  
DURING 1929

Nova Scotia—		
Atlantic salmon.....	6,596,855	
Speckled trout.....	5,466,112	12,062,967
New Brunswick		
Atlantic salmon.....	10,498,004	
Brown trout.....	101,423	
Landlocked salmon.....	94,713	
Loch Leven trout.....	40,398	
Rainbow trout.....	318	
Speckled trout.....	2,459,050	13,193,906
Prince Edward Island		
Atlantic salmon.....	308,127	
Rainbow trout.....	25,372	
Speckled trout.....	682,354	1,015,853
Manitoba—		
Pickrel.....	145,375,000	
Salmon trout.....	109,500	
Whitefish.....	141,000,000	286,484,500
Saskatchewan—		
Loch Leven trout.....	133,714	
Pickrel.....	54,057,500	
Salmon trout.....	91,228	
Whitefish.....	60,720,000	115,002,442
Alberta—		
Brown trout.....	43,800	
Cutthroat trout.....	2,236,185	
Loch Leven trout.....	332,000	
Pickrel.....	19,820,000	
Rainbow trout.....	1,209,837	
Salmon trout.....	49,000	
Speckled trout.....	208,786	
Whitefish.....	10,355,000	34,254,608
British Columbia—		
Cutthroat trout.....	212,324	
Kamloops trout.....	3,404,256	
Kennerly's salmon.....	264,000	
Rainbow trout.....	460,589	
Sockeye salmon.....	96,914,105	
Speckled trout.....	626,007	
Spring salmon.....	1,535,280	
Steelhead salmon.....	176,544	
Whitefish.....	4,680,000	108,273,105
		(a) 570,287,381

(a) This distribution represents output 1929 resulting from autumn spawners of 1928 and from spring spawners of 1929.

In addition to the above 484,245 cutthroat trout eyed eggs were purchased from S. S. Drew, Troy, Montana, and planted direct as follows:—

Fraser River watershed—	
Sumas river.....	25,000
Kanaka creek.....	25,000
Nicomelk river.....	434,245

Full particulars regarding the extent and scope of this service appear in the Annual Report on Fish Culture for 1929, which appears as Appendix No. 3 herewith. Copies of the report on fish culture may be obtained on application to the Fisheries Branch.

## FISH COLLECTION SERVICE

The Fish Collection Service, which has been in operation on sections of the Atlantic coast for three seasons, carrying the fishermen's catches to central marketing points, has proved its usefulness and expansion has been found necessary from year to year. Its operation enables the fishermen to get cash for their catches. They are saved the time, work, and expense which would be involved in curing their fish, and thus they are able to spend more time in actual fishing, with consequent increase in their earnings.

During the 1929 season the service was carried on along six stretches of coast and twenty boats, in all, were employed in the collection work, though not all continuously or at the same time. The total quantity of fish carried was 8,623,215 pounds, or some 3,300,000 pounds more than in 1928, and the total cost was slightly over \$83,000 or less than one cent per pound. The fish are transported at a cost to the shippers of ten cents per hundred pounds but the collecting boats are required to carry supplies of bait and ice free of charge and to return the empty shipping boxes without charge to the fishermen. The quantity of fish carried on the several routes in 1929 was as follows: Ecum Secum-Halifax, 846,970 pounds; Westport-Digby, 2,799,269 pounds; Main-à-Dieu to Canso, 1,565,271 pounds; Port Beckerton-Canso, 3,056,967 pounds, Port Latour-Lockeport, 141,054 pounds; Port Hood-Hawkesbury, 213,784 pounds. Cod and haddock made up by far the great part of the total quantity of fish carried. Nearly 4,568,000 pounds of cod were collected and slightly more than 2,800,000 pounds of haddock.

The regular commercial boat services are of practically no use in the transportation of fresh fish since they are not equipped with the facilities necessary for handling fish in this form and their schedules do not provide for trips in sufficient frequency; moreover, in numbers of cases, the draft requirements of the vessels are too great to permit them to enter the fishing ports. Hence, if the fishing industry is to be given a fair chance to develop, it must be afforded reasonably adequate transportation facilities of another kind for the marketing of the fresh fish that is taken, and it is these facilities which the Fish Collection Service is designed to supply.

That the service has proved a remarkable incentive to the development of the industry is evidenced by the fact that in the winter of 1928 over twenty new fishing boats were built in the districts it covered, and during the present winter eighty-seven motor boats were added to the fishing fleet and other preparations for the expansion of operations were made in the way of building piers, storing increased quantities of ice, etc. In some instances plans for hand-trawling in place of hand-lining were being made.

At the same time, the lack of boats that were wholly suitable for the collection work has prevented the service from being as efficient as it should have been. This condition as to available boats has also made it necessary to employ a larger number of carriers than would otherwise have been needed and has added to the cost of operations. Experience has shown that the type of boats needed should have high speed, large carrying capacity, chilled holds, good sea-going qualities, and, at the same time, shallow draft so that entry into the smaller harbours may be possible. With these facts in mind, it was decided, last autumn, to call for tenders for supplying five boats of this type on a subsidy basis. The lowest tender was accepted, as it was considered reasonable. Boats which fully meet all the requirements indicated above are to be provided under the contract at \$1,975 per month, gross, and the entire expense of operating them satisfactorily is to be borne by the owners. The term of the subsidy is for at least five months of each year for a period of five years.

As the present fiscal year draws to a close it seems doubtful if it will be feasible during the coming season to operate the service to the extent expected

since, on account of the steam trawler regulations, the companies which have previously been buying most of the fish in the collecting areas have quite recently intimated that they will not be prepared to do so in the 1930 season. This information is causing a measure of consternation among the fishermen in these areas, since, as already explained, they had made arrangements for fishing more intensively during the coming season than in the past; nevertheless, they feel that the trawler regulations are in their permanent interest and should be maintained. At this late date it will not be possible for new arrangements to be made, on those portions of the coast under consideration, for handling fish for the fresh fish markets in the earlier part of the season but it is anticipated that the service will be necessary in the later months. Having properly-adapted boats available will probably also make it possible to open up new channels to the fishermen of the more easterly portion of the coast for marketing their lobsters, and certain other products, more profitably than they have been able to do in the past. Even as regards the approaching season, which, there seems little doubt, will prove the transition period, there is no indication that the boats will not be needed, and there is nothing to suggest that they will not be required throughout the full term covered by the contract.

### FISHERIES INTELLIGENCE SERVICE

Distribution of weather, bait, and ice reports by radio, which was begun by the Fisheries Branch several years ago, has been proving increasingly useful to the men engaged in the Atlantic fisheries. Most of the vessels employed in the fisheries are now equipped with wireless receiving sets and as the broadcasts cover all the important fishing grounds, including the Grand Banks, this radio service is of very material benefit to the fishermen. During the year under review the weather reports were broadcast twice daily from St. John, Halifax, and Louisburg. Reports as to bait and ice conditions, collected by telegraph and telephone from fisheries officers along the coast and compiled at the Halifax office, were broadcast twice a day from Halifax and Louisburg during the period from April onward. The broadcast was also repeated on the banks from C.G.S. *Arras*. The reports covered conditions at some twenty different points, and through an arrangement made with the Newfoundland Department of Marine and Fisheries it was possible to add to them useful information as to bait supplies and the apparent abundance or scarcity of fish in several Newfoundland areas. From time to time items of current news were also included in the broadcasts from Halifax and Louisburg, as well as emergent messages to men on the fishing vessels.

In November the publication of a monthly Fisheries News Bulletin was begun by the Fisheries Intelligence and Publicity Division. The bulletin is designed to spread information as to Canada's fisheries resources and fishing industry and the national importance of the fisheries enterprises. It is printed both in English and French editions and is distributed to newspapers, fishermen's organizations, individual fishermen, various persons in the fishing trade, and among the public generally. In the course of the year arrangements were also made, with the co-operation of the Commercial Intelligence Service of the Department of Trade and Commerce, whereby cable reports as to market conditions touching dried and pickled fish in certain important export markets are obtained monthly and distributed from Ottawa in summarized form to persons interested in the production of dried and pickled fish in Canada. The cable reports are made by the Canadian Government Trade Commissioners at Havana, Cuba; Kingston, Jamaica; Port of Spain, Trinidad; Rio de Janeiro, Brazil; and Milan, Italy, respectively. Through the courtesy of the Royal Bank of Canada cable reports are also supplied by the bank's branch at San Juan,

Porto Rico. Several pamphlets relating to the fisheries were prepared and issued during the year by the Publicity Division, which also deals with requests for general information as to the fisheries.

Collection of statistics of all fisheries which are under federal control is an important part of the work of the Fisheries Intelligence and Publicity Division. The statistics are collected by fishery officers and are checked at Ottawa. Sea-fishery statistics are collected monthly and are published in detail every three months in the Quarterly Bulletin of Sea Fishery Statistics. A system for the monthly collection of statistics of the fisheries in the Prairie Provinces has also been recently brought into effect by the Fisheries Branch. The figures for the annual fisheries statistical report, which is published by the Dominion Bureau of Statistics, are collected by the Fisheries Branch, for the most part, so far as the fisheries administered by the Dominion are concerned, and the work of preparing them for publication is done by the bureau and the branch jointly.

### SCALLOP INVESTIGATIONS

Scallop investigations in Maritime Province waters were continued during the year. Two boats were specially assigned to this work. The *Madeline A*, Captain Walter F. Doucette, with Mr. H. S. LeBlanc as Observer, was in service along the shore of Nova Scotia from Cape Negro island, West channel, in Shelburne county, to Conrad's cove, in Lunenburg county. The *Alberton*, with Mr. Seymour A. Young as Captain and Observer, operated in six different areas off the coast of Prince Edward Island.

The scallop areas which were revealed by the work of the *Madeline A* as apparently most promising were found offshore from Cape Negro harbour well up to the entrance of Port Clyde and at Port LeHebert. At Port Medway, scallops of good size were found but they were scattered over a considerable area. At the other places where draggings were made, results did not indicate the presence of scallops in commercial quantities. All told, three hundred and sixty-eight draggings were carried out by the *Madeline A*.

The investigations made by the *Alberton* were in the Charlottetown Harbour area, the Georgetown area, the Alberton and Malpeque area, the South Point or Wood Island area, the Miminegash area and the Murray Harbour area. Charlottetown harbour was found to possess fair sized scallops in some abundance but the small area of the sea-bed indicated that commercial fishing could not be carried on continuously over any extended period of years. Investigation in the Georgetown area showed scallops apparently present in sufficient quantities to enable commercial fishing to be carried on fairly profitably. The Alberton area, as a whole, is a most promising scallop ground and draggings which were made brought out indications of rapid replenishment of depletions made by previous commercial fishing.

The South Point, Miminegash and Murray Harbour areas abounded in scallops some years ago, but, since 1927, for some reason that has not been established, a great many of the scallops have died. In these three areas, however, Captain Young found indications of numerous young scallops and, as the areas are quite large and the sea-bed is well suited to scallop development, the observer was of the opinion that the prospect of a speedy replenishment of these fields was encouraging.

Further account of the scallop investigations will be found in Appendix No. 5.

### OYSTER INVESTIGATIONS IN PRINCE EDWARD ISLAND

Commencing on June 15, further investigation in connection with the oyster resources of Prince Edward Island was carried on by Mr. A. W. H.

Needler, of the staff of the Biological Board. The investigation was centred in the Bideford river area, part of the Malpeque bay region, which was formerly the most productive section of the Canadian oyster industry. Some 750 bushels of clean shells were placed in the river in galvanized wire baskets. Observations of the temperatures were made and the oysters themselves were kept under observation. Spawning was found to take place at the head of Bideford river about July 15 when the temperature was approximately 20 to 22° C. Spat was first observed in the shells on August 7 and continued to appear until about August 20, after which none was observed in the early fixed stages. Larvae were not taken but the observations suggested that from two to three weeks is the approximate time occupied in the free larval stage. It was found that spat appeared on the clean shells everywhere in the upper two miles in the river and that the concentration was greatest from one to two feet below ordinary tide. A cultch consisting of 500 bushels of mussel shells which had been ashore two years, and 250 bushels of oyster shells which had been ashore for two weeks, was put out. It was found that very little difference existed between sets on the mussel shells and sets on the oyster shells. In the case of the latter, however, even the innermost shells showed a good set while in the case of the sets on the mussel shells the spat did not penetrate to the same extent. Regular temperatures and water samples were taken throughout the season and data were collected at Percival river, at East river (Charlottetown), and at Savage harbour. The data obtained showed that the water reached a temperature about 70° F. everywhere in the areas examined, and at the heads of the creeks in Bideford river went as high as 85° F. Observations were made on the presence of starfish and the distribution of oysters of various size in different areas and a start was made at taking plankton samples. With a view to future observation two small beds were cleaned and planted with 60 barrels of large oysters. About half of the spat obtained during the summer was also planted thickly on clean beds. The investigations are outlined in more detail in Appendix No. 6.

### ORGANIZATION OF FISHERMEN

Acting in accordance with the recommendations of the Royal Commission on the Fisheries of the Maritime Provinces and the Magdalen Islands, the department took action during the year to assist the fishermen of these territories in formulating plans of organization and carrying them out. Dealing with this subject the Royal Commission had recommended "that the establishment of co-operative organizations of fishermen be assisted by the department as soon as possible, and that an organizer, experienced in co-operative methods, be appointed and paid by the federal Government for the required period to initiate and complete this work." It was obviously of the utmost importance that every care be taken in selecting a soundly-equipped person to undertake this work of organization. The field of selection was carefully examined and in September, 1929, Rev. Dr. M. M. Coady, of the Faculty of the University of St. Francis Xavier, Antigonish, N.S., was appointed by the Civil Service Commission as Promoter of Fishermen's Organization. Dr. Coady had devoted much time to an examination of the rural problem in the Maritime Provinces, especially in Nova Scotia, and, in addition, he had studied at first hand the co-operative movement among the farmers of Western Canada and parts of the United States. He began his work as Promoter of Fishermen's Organization immediately upon his appointment in September and has continued it throughout the remainder of the fiscal year. He has visited fishing communities in all parts of the Maritime Provinces, and in most of them local fishermen's associations have been formed. At the present time there are more than 100 such associations in the three provinces, the great majority of them established directly as a result of the depart-

ment's work through Dr. Coady. It is the intention that Dr. Coady should continue in his position until the fishermen in remaining parts of the Maritime Provinces and in the Magdalen Islands have been organized, and it is expected that this will have been accomplished by early summer. It is proposed that a convention of delegates from the various local associations will then be held at some central point. At this convention the delegates will have opportunity to decide what form of federation of the associations should be adopted and to determine the policy to be followed by any united body that may be established.

### MEETINGS OF FISHERIES OFFICERS

In the course of the fiscal year meetings of fisheries officers were held both on the Pacific coast and the Atlantic coast. The British Columbia officers met at Vancouver and the sea fisheries officers of the Maritime Provinces and the Magdalen Islands at Halifax. In each case the sessions continued for two days. At Vancouver the Chief Supervisor of Fisheries for British Columbia presided and at Halifax the Director of Fisheries Promotion and Inspection. It is the policy of the department to have meetings of this kind held annually.

At the Atlantic coast conference the agenda included the presentation of papers by various officers and general discussions of points in connection with fisheries administrative work which the papers brought forward or suggested. The subjects thus taken up included the effective utilization of fisheries officers in educational and demonstrational work, the enforcement of the provisions of the Fish Inspection Act, the prevention of illegal fishing whether in tidal or non-tidal waters, the application of the Knight plan for inspecting and grading lobster factories, the collection of fisheries statistics, the most efficient division of officers' time between office and field work, and the advisability of giving to each lobster cannery a permanent licence number and having this number stamped on all cans of lobster intended for exportation. In addition to the questions raised in the officers' papers or brought up in the discussions, various points were put before the conference by representatives of several branches of the fishing industry, who had been asked to read papers, and by spokesmen for fish and game associations who were present by invitation. The agenda also included an address by the Promoter of Fishermen's Organization, who discussed the benefits which might be expected to follow from the formation of fishermen's associations. Resolutions referring to various fisheries and administrative questions were drawn up by the officers and approved by them at a sitting which they held during the conference, and those of the resolutions which called for departmental action have since been taken under consideration.

At British Columbia conference separate district assemblies were first held, when the officers of each of the three fisheries districts of the province met with the Chief Supervisor and discussed district matters. At the subsequent meeting of all the officers a large number of questions of general importance were considered. The subjects taken up included such questions as the weekly closed season, suggested changes in the regulations, patrol methods, examination of spawning areas, pollution of streams, capture of immature salmon, statistics, method of issuing licences, injury done by predaceous birds, seizure of illegal equipment, etc. Memoranda covering the discussion of the principal points brought up were made for departmental purposes by the Chief Supervisor.

### FISHING BOUNTY

Payments of fishing bounties during the year amounted in all to \$159,749.35, which was allotted as follows: to 546 vessels and their crews, \$40,282; to 9,000 boats and their crews \$119,467.35. Fishing bounties are paid from the sum of \$160,000 which is appropriated annually by the Governor in Council under the authority of "An Act to Encourage the Development of the Sea Fisheries

and Building of Fishing Vessels." The distribution is among fishermen and fishing vessels and boat-owners on the Atlantic coast under regulations made from time to time by the Governor in Council.

The basis of distribution for the year 1929 was as follows:—

To owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80.

To vessel fishermen entitled to receive bounty, \$7.50 each.

To owners of boats measuring not less than 12-foot keel, \$1 per boat.

To boat fishermen entitled to receive bounty, \$6.65 each.

There were 9,546 bounty claims paid. In the preceding year 9,390 claims were paid.

The following statement shows the 1929 expenditures in detail:—

1929-30

## PACIFIC COAST SALMON TAGGING

In the course of the past five years an extensive salmon tagging program has been carried on in British Columbia waters, under the auspices of the Biological Board of Canada, with a view to obtaining accurate information as to the migration routes of the several species of Pacific salmon, and, as a result, there is being built up a body of material very valuable from the administrative and scientific points of view and of a great deal of general interest. A continuation of tagging programs has been planned. A summary of the results of operations so far is included in Appendix No. 2, and persons interested in the fisheries will find its perusal well worth while. In reading the summary, however, it should be kept in mind that the information touching 1929 tagging operations should not be regarded as complete. Additional recaptures of tagged salmon during 1930 may be expected to alter the figures somewhat.

Another important investigation which is being carried on in British Columbia under Biological Board auspices is that which has been in progress at Cultus lake since 1925 with a view to determining whether artificial propagation of sockeye by means of hatcheries is more efficient than natural propagation, and, if so, to what degree. Investigation is also being directed toward ascertaining the degree of mortality during the salt water period of the sockeye's life, but this phase of the inquiry is as yet in the experimental stage only.

The chief advantage claimed for artificial propagation is that it curtails or avoids certain losses which occur in natural propagation, and, so far, the Cultus investigation has indicated that the artificial method of propagation has been four times as efficient as the natural method. It must be distinctly emphasized, however, that the inquiry is far from completed and positive conclusions are not safely to be drawn from the results so far observed. Further research may establish facts materially different from those which have seemingly been indicated up to the present.

Stated in broad, general outline, the operations followed in the investigation consist, firstly, of counting all the sockeye entering the counting weir at the lake each year and, secondly, counting the young resulting from each spawning as they make their way seaward, either as fry, yearling or two year olds. In this way the comparisons are being made as between the results of natural propagation and the results of artificial methods. Since two methods of artificial propagation are followed, the comparisons cover cycles of three years and the program mapped out for the investigation calls for its continuance for four complete cycles. It is believed that at the end of the cycles—in other words, twelve years—the results will show clearly the relative merits of the several methods of propagation and will also indicate the applicability of artificial methods to certain concrete situations which may be found in the maintenance and development of the sockeye fishery.

In 1925 and in 1927 natural propagation was followed in the investigation, and artificial propagation in 1926, 1928, and 1929. In the years of natural propagation all sockeye are counted and then allowed to continue their way to the spawning grounds. The number of female fish being known, and the average number of eggs carried by each, an estimate of the total number of eggs contained in the fish can be made. In turn, the number of down-stream migrants resulting from each natural spawning is ascertained through an actual count of all salmon passing from the lake. The success of this method of propagation is therefore determined in total number of migrants and in percentage of the total number of eggs deposited.

In artificial propagation the investigation has employed two of the standard methods—one, development of the eggs to the "eyed" stage and planting them in the gravel of the spawning bed and, in the other case, the development of the "free-swimming fry" stage and subsequent liberation in the lake. Whichever

method is followed, all the sockeye are retained below the lake and spawned, and the eggs are removed to the hatchery. An estimate is made up as to the egg losses caused by incomplete stripping or by females dying before they had spawned; and the losses occurring in the hatchery are recorded up to the time of the removal of the "eyed" eggs, in the one instance, and the liberation of the "free swimming" fry, in the other instance. Down-stream migrants resulting from each year of artificial propagation are counted, as in the cases in which natural propagation has been employed, and the percentage they represent of the total number of eggs collected is determined.

In 1925, when natural propagation was the method followed, 3,883 female sockeye were counted, when bound to the spawning grounds, and 1,540 males. The total number of eggs contained in the female fish was 17,473,500. There were 197,562 migrants from the 1925 spawning, a number equal to 1.13 per cent of the egg total. In the following year 1,949 female sockeye entered the counting weir and 3,122 males. The females contained 8,770,500 eggs and the total collection of eggs was 6,487,000. Subsequent observation showed that there were 347,229 migrants from this spawning, which was equal to approximately 3.96 per cent of the number of eggs contained in the spawned fish.

#### NORTH AMERICAN COMMITTEE ON FISHERY INVESTIGATIONS

The very important matter of the relation of the temperature of the water to the fisheries is among the subjects which have been engaging the attention of the North American Committee on Fishery Investigations, a body which co-ordinates investigations of common interest to the countries represented on it, viz., United States, Canada, Newfoundland, and France. Efforts are being made to obtain daily records of the temperature of the water along at least the most important fishing sections of the Atlantic coast. During the year the Biological Board of Canada established six stations for this purpose from Grand Manan in the bay of Fundy to Cape Breton island. Particularly on the outer coast of Nova Scotia, as, for example, at Sambro island off Halifax, do rapid changes occur that bring or drive away important fishes, such as cod and haddock. These changes must be correlated over a period of years with the landings of fish for the various districts. The committee believes it desirable to have the statistics of landings reported in a more regular and uniform fashion and is arranging for a system of reporting the statistics that will make accurate comparison easier.

Special investigations of cod, haddock, and mackerel have been in progress and important findings have been reviewed by the committee. The cod of western Nova Scotia are relatively stationary, migrating very short distances, though some may travel westward to Rhode Island and eastward to Miquelon. The cod around Cape Breton island in eastern Nova Scotia do not seem to be as thoroughly fished as those to the westward, since fewer tagged fish are recaptured. They are not stationary, but migrate out to the Sable island banks during the winter, and may go into the gulf of St. Lawrence as far as the Gaspé coast during the summer. Cape Breton haddock migrate similarly to the cod, but may go south and west during the winter as far as cape Sable, while none of the tagged fish have been reported from points very far inside the gulf during the summer. The mackerel migrate more rapidly than either cod or haddock, but there is no evidence that they go much farther, being distributed from the outer banks during the winter to the southern parts of the gulf of St. Lawrence and the gulf of Maine during the summer. Fluctuations in the abundance of mackerel from year to year are found to be due in large part to very considerable differences in the year classes or stocks of mackerel produced in the various years.

The committee, which held its meeting for 1929 at Ottawa on October 15 and 16, has had under particular consideration the very extensive international

fisheries centred in the entrances to Passamaquoddy bay, which appear to be jeopardized should power dams proposed for those entrances be constructed. A recommendation has been made to the interested governments that an investigation covering at least two years would provide valuable additional data to form a sounder basis than at present exists for predicting the effects of the dams on the fisheries of the region. A smaller project for damming merely Cobscook bay on the Maine side of the boundary line was thought not likely to cause any serious or widespread damage to the fisheries.

### INTERNATIONAL HALIBUT COMMISSION

Under the convention between the United States and Canada for the conservation of the Pacific halibut fisheries, the International Fisheries Commission is charged with the duty of making a thorough investigation into the life history of the halibut and of making recommendations to the two Governments for such regulation as may seem desirable for its preservation and development. This implies the maintenance of a system of observation.

As has been recorded in a previous report, the commission has collected material for a continuous record of the past and present of the fishery, thus forming a secure basis for future observation. The report upon this material is now in progress through the press. It shows that the abundance on the older banks has fallen to a sixth in twenty years, and no doubt can remain but that the banks are now much understocked. It may be granted that under undisturbed natural conditions these banks may have been overstocked, but the reverse is certainly now true. The system of observation in effect has during the past year indicated that the decline in abundance continues at a rapid rate throughout the newer banks, and that on the older the catch has reached the minimum upon which the fleet can exist. It has in places become so low as to make the vessels dependent upon other less desirable species, as rock cods.

The first results of the marking experiments were completed during the year and have been issued. They indicate that approximately forty per cent of the stock of commercial sizes on the banks adjacent to British Columbia is removed yearly, a result explaining the present absence of adult spawners there, in harmony with the overfishing shown by the statistics already mentioned. The residual immature population is found to move little and only by a random scattering migration, averaging less than twenty miles between tagging and recovery. A much smaller percentage of the large mature fish of Alaskan banks is caught annually. These are shown to belong to a stock which migrates to and fro along the coast of the Alaska peninsula averaging 200 miles between marking and recovery.

The essential independence of the marketable fish of the banks adjacent to the Alaskan and Canadian coasts is demonstrated, and it is proved that each must be held responsible for bringing its quota of spawning fish to maturity. The previous recommendations of the commission are completely supported by the detailed findings.

Other reports completed during the year include a history of the fishery, showing that it has maintained its yield solely by means of constant expansion and by continually increased economy and efficiency rather than by the persistence of the supply available. Hydrographic studies of the velocity and direction of the currents which carry the eggs and larvæ have also been completed. It is indicated that the latter are carried westward from the Alaskan spawning grounds and not southward, thereby explaining the complementary migration of the adults. The methods used were those of the International Ice Patrol in forecasting the movement of icebergs.

The marking experiments already reported upon left untouched certain problems as to the migration of mature on the coast of British Columbia, of

immature along the Alaskan Coast, and of both classes at the western extreme of the fishery. Accordingly, during the year the experiments were extended to tag a sample of 928 fish at the Shumagin islands, in April and May of 1929, and of 712 on the west coast of the Queen Charlotte islands in March and April of 1930. The returns from these and the earlier experiments were compiled and in process of analysis during the year. It is thought that development of facts uncovered by the first tagging report will greatly facilitate observation of the condition of the fishery and its changes.

The eggs and larvæ are spawned in the period from late December to March and float freely in the ocean waters at various depths. Net hauls are made for the purposes of determining (1) the relationship of spawning grounds to those occupied by the immature sizes and to the migratory routes of the mature, and (2) the source of whatever eggs and larvæ may be maintaining the fisheries on the banks adjacent to British Columbia, which are greatly depleted.

To the end that it may be known to what extent larvæ are spawned in Canadian waters, 100 hauls were made in April, 1929, between cape Flattery and Dixon entrance, particularly over the famous Goose island ground, and in May, 1930, in Hecate strait and Dixon entrance, also a series off the West Coast of the Queen Charlotte islands. The scarcity of larvæ taken off British Columbia contrasted sharply with the relative abundance in the waters off the western Alaskan coast, and apparently indicated that there were few spawning fish off the Canadian coast.

The month of May is, however, too soon after the spawning season to expect any great influx of larvæ drifting from Alaskan areas. As a basis for the determination of this drift and to compare the abundance off British Columbia with that at the same season off Alaska a preliminary series of 110 hauls was taken in the gulf of Alaska in late March and the first week of April, 1929. These indicated the occasional presence of larvæ well out in the gulf of Alaska, perhaps in numbers sufficient to explain their presence off British Columbia, although they were much less abundant than they were along the edge of the continental slope of the Alaskan coast. It therefore became obvious that a much more extensive and better distributed series of net hauls were necessary to study the actual drift. Accordingly, during late February and early March in 1930, 55 hauls were made and 150 during April. Although positive statement cannot presently be made it seems that as late as May 1 those stations made along a line between Dixon entrance and Trinity islands were barren of larvæ, while at least some specimens, whatever their number, were taken in hauls north of this line, the greater number again along the continental slope. Since even at this date the larvæ were not far advanced, it is plain that further work in late May and June must be done, before an answer is available to the query as to the amount and time of the larval drift.

Further work on the materials already collected for analysis of the life-history has been continually under way and further reports are expected from time to time, notably upon racial characteristics and growth rate.

#### INTERNATIONAL PACIFIC SALMON FEDERATION

The 1930 meeting of the International Pacific Salmon Federation, which was formed in 1925 primarily for the purpose of establishing closer co-operation between United States and Canadian authorities in the study of problems of salmon life in the North Pacific area, was held at Stanford University, Palo Alto, California, on March 28 and 29. The Federation is made up of representatives of Canada, the United States, the State of Washington, the State of Oregon, and the State of California. Representing Canada are Dr. W. A. Clemens, Director of the Pacific Biological Station of the Biological Board of Canada, Mr. J. P. Babcock, Deputy Commissioner of Fisheries for the Province

of British Columbia, and the undersigned, or, in his absence, Major J. A. Motherwell, the department's Chief Supervisor of Fisheries for British Columbia. Major Motherwell, Dr. Clemens, and Mr. Babcock were in attendance at the 1930 meeting which heard papers on various subjects and discussion on these subjects and related questions. Dr. R. E. Foerster and Dr. A. L. Pritchard, of the staff of the Biological Board, were also present. By direction of the department two questions were brought particularly to the attention of the meeting: "Water Power Development as it Affects the Fisheries, and the Progress Made to Overcome or Minimize the Difficulties of the Passage of Fish over High Dams, both in Upstream and Downstream Migration," and "Counting Fences, their Construction and the Results Secured in Returns from Known Escapements."

### PELAGIC SEALING TREATY

The Pelagic Sealing Treaty, which became effective in 1911, continues to operate satisfactorily, so far as the American and Japanese herds are concerned. Until the question of diplomatic relations with Russia on the part of all concerned has become settled, however, it is unlikely that the treaty will be in full operation as regards the Russian herd. It has not been possible in recent years to obtain any reliable information as to the situation in regard to the herds on the Russian islands. The successful operation of the treaty so far as the American and Japanese herds are concerned is evidenced by the increase in the number of seals in these herds which has taken place since the treaty became operative. When the treaty was made in 1911, the American herd had been reduced to approximately 125,000 seals, while the last census report, 1928, showed a total of 871,513. This increase occurred notwithstanding that the number of selected seals taken annually is being increased from time to time. In 1928 the total number of seal skins taken was 31,099.

The Japanese rookeries are small so there is not room for great increase. None the less the herd there is also being built up, as is shown by the fact that, while it numbered only 9,041 seals when the treaty became effective, the latest information available now shows a seal population of over 30,000.

During the present fiscal year the payment to Canada under the treaty was \$62,507.32.

Your obedient servant,

WILLIAM A. FOUND,

*Deputy Minister of Fisheries.*

## APPENDIX NO. 1

## REPORTS OF SUPERVISORS OF FISHERIES

## REPORT OF ACTING CHIEF SUPERVISOR SHREVE, PROVINCE OF NOVA SCOTIA, FOR 1929

The value of the fisheries of the province of Nova Scotia for the year 1929 amounted to \$11,455,491, a decrease of \$126,504 from the previous year when the marketed value amounted to \$11,681,995. The figures for 1929, however, are not at all discouraging, as a review of the past eight previous years will show that the 1929 value has only been exceeded in the years 1926 and 1920.

The value of the fisheries of the province for the past nine years has been as follows:—

1920.....	\$ 12,742,659
1921.....	9,778,623
1922.....	10,209,258
1923.....	8,448,385
1924.....	8,777,251
1925.....	10,213,779
1926.....	12,505,922
1927.....	10,783,631
1928.....	11,681,995
1929.....	11,455,491

There was continued expansion and development made in connection with the fresh fish industry, and this development will undoubtedly continue with the increase of cold storage plants and the further improvement of quick freezing methods. The future of the fresh fish industry of this province is particularly promising as new markets are being continually developed, and improved methods in freezing, refrigeration, transportation, etc., enable the product to be placed on far distant markets in perfect condition.

The cod fishery while showing a decrease in 1929 from the catch of the previous year continued to maintain its rank as usual in first position, the lobster and haddock fisheries ranking next in importance, respectively. All of the commercial fisheries showed increased catches with the exception of the cod, scallop and swordfish fisheries.

## COD

The cod fishery showed a decrease of \$893,436 in value as compared with the year 1928. This decrease was mainly responsible for the drop in the marketed value of the fisheries as a whole.

The catch amounted to 1,297,841 cwt., having a landed value of \$2,537,322, and a marketed value of \$3,504,583, as compared with a catch of 1,470,172 cwt., landed value of \$2,822,472 and a marketed value of \$4,398,019 in 1928.

## LOBSTERS

The total lobster catch in 1929 was 190,035 cwt. having a marketed value of \$3,210,504, as compared with 172,409 cwt. having a marketed value of \$3,048,255 in 1928. The total pack of canned lobsters was 60,661 cases as compared with 55,277 cases in the previous year. The total marketed value for the year under review was \$3,210,504, as compared with \$3,048,255 for 1928.

There was a considerable increase in the amount of lobsters shipped in shell. During 1929 the quantity so shipped amounted to 73,582 cwt. while during the preceding year 66,239 cwt. were shipped. Shipment of the lobsters in shell is being extended and is now carried on from districts where formerly all lobsters caught were canned.

The trade, with American centres such as New York, Boston and Portland, which at one time was confined to points in Western Nova Scotia, was extended into eastern areas in 1929. The Canadian demand for lobsters in a fresh state was also found to be increasing.

In spite of the large proportion of the catch sold in the shell the quantities canned during 1929 exceeded the amount canned during the previous year by 5,384 cases. Although the markets for tomalley and lobster paste do not encourage the pack of these by-products, 3,151 cases were put up as compared with 3,226 cases in 1928. Very few complaints of a serious nature regarding the qualities of the canned product have been reported.

The size of the packs of Japanese crab meat and South African crayfish and the prices at which these commodities can or will be sold, will undoubtedly affect the demand for canned lobsters. However, in view of the quantity of lobsters caught and packed in Nova Scotia, as compared with other sections, it should not be difficult to control marketing and standardizing of quality and other features despite any competition from crabmeat and crayfish.

The lobster fishermen suffered heavy losses during the spring through storms that played havoc along the coast. The fishermen lost much of their equipment in various sections. While lobsters were plentiful, the weather for the most part was such that fishermen were unable to operate to full advantage.

The catch in the Northumberland straits district was one of the largest for many years. The catch in the island of Cape Breton showed a considerable increase as compared with the preceding year. Western Nova Scotia was not so fortunate, and a decrease occurred in that section. No extensions for the lobster seasons were granted for any part of the coast during the year.

#### HADDOCK

The year's landings of haddock amounted to 516,149 cwt. as compared with 445,950 cwt. in the preceding year, an increase of 70,199 cwt. The landed value for the year was \$990,847, and the marketed value \$1,871,947, as compared with a landed value of \$917,404, and a marketed value of \$1,654,977 in 1928. The increase in the landed value was \$73,443 and in the marketed value the increase amounted to \$216,970.

#### HERRING

The increase in the herring catch was general along the coast. The landings amounted to 516,149 cwt. as compared with 445,940 cwt. during 1928. The increase in the catch was 71,340 cwt., while the increase in the marketed value amounted to \$157,742. The catch was the largest since 1926.

#### HALIBUT

The halibut fishery showed a gain both in the amount of fish landed and the marketed value. The catch was 30,971 cwt. as against 25,768 cwt. in 1928, an increase of 5,203 cwt., while the marketed value showed an increase of \$72,866. The western section of the province was responsible for the increased landings of halibut, as decreases were registered in the eastern mainland section as well as in the island of Cape Breton. The decreases in eastern Nova Scotia, both mainland and Cape Breton, were due to smaller trawler landings.

## MACKEREL

In the mackerel fishery there was a very considerable increase in the catch as well as in the landed and marketed value; in fact the catch has not been exceeded for some years past. All told, 107,385 cwt. were landed, as compared with 71,440 cwt. in 1928. The landed value amounted to \$269,841 and the marketed value \$387,179, as compared with a landed value of \$244,916 and a marketed value of \$369,752 for the previous year. The increase in the marketed value amounted to \$17,427. Heavy increases were shown on the island of Cape Breton, where mackerel were exceptionally plentiful and the weather unusually good during the time the fish were on the coast. The catch in this district would have been even greater had not the fishermen been obliged to discontinue operations when they ran out of salt and containers. There was also a substantial increase in Guysboro County West, where only spring mackerel are taken, and a heavy catch in Guysboro County East during the month of June. A considerable part of the increase in the catch was registered in the western section of the province.

## HAKE AND CUSK

The landings of hake and cusk amounted to 184,713 cwt. as compared with 158,744 for the previous year, an increase of 25,969 cwt. The landed value for the year was \$145,190 and the marketed value \$321,772 as compared with a landed value of \$132,046 and a marketed value of \$268,577 for the year 1928. The increase in the marketed value amounted to \$53,195.

## SALMON

There was an increase of 497 cwt. in the salmon fishery, and 7,556 cwt. were landed as compared with 7,059 cwt. last year. These catches, however, do not compare favourably with those of previous years. The marketed value of the catch for 1929 amounted to \$155,651 as compared with \$138,681, an increase of \$16,970. Increased landings were made on the island of Cape Breton and western Nova Scotia, but the eastern portion of the mainland had the smallest catch for a number of years.

## SMELTS

The total smelt catch for the year was 7,184 cwt. with a marketed value of \$119,659 as compared with a catch of 6,089 cwt. valued at \$103,535 during 1928. The increase in the catch amounted to 1,095 cwt. and the marketed value \$16,124. The increase in landings was general along all sections of the coast.

## SCALLOPS

The scallop fishery showed a decrease of 7,677 barrels as compared with the previous year's landings. In 1928, 24,533 barrels were landed, as compared with 16,856 bbls. for the present year. In 1929 the catch was the smallest since 1924. The marketed value for the year amounted to \$110,192 as against \$156,188 for the previous year, a decrease of \$45,996. The decline in the catch is attributed to bad weather and depleted beds. The fishery was not prosecuted in the bay of Fundy section as vigorously as in former years, and the catch in the Digby-Annapolis district fell off to a great extent. The catch for the province, by years, for the past seven years has been as follows:—

	Barrels
1923.....	11,839
1924.....	7,504
1925.....	12,404
1926.....	19,918
1927.....	37,607
1928.....	24,533
1929.....	16,856

The marketed value for the years referred to above is shown in the following table:—

1923.....	\$ 72,547
1924.....	51,793
1925.....	76,025
1926.....	138,472
1927.....	212,838
1928.....	156,188
1929.....	110,192

#### SWORDFISH

The swordfishery was not a success. There was a decrease of 1,752 cwt. in catch and a decrease in the marketed value of \$34,104. Last year 8,088 cwt. were landed, while in 1929 the catch amounted to only 6,336 cwt. The marketed value for the respective years was \$132,345 and \$98,241. The decrease in the fishery was general in the swordfishing areas. On the island of Cape Breton unfavourable weather prevailed during the swordfishing season, greatly interfering with the operations of the fishermen. The largest landings made on the island of Cape Breton were at the following points:—

Louisburg.....	3,265 cwt.
Petit de Grat.....	446 "
North Sydney.....	431 "
Glace Bay.....	302 "
South Ingonish.....	224 "

On the eastern portion of the mainland the heaviest catches were made in Guysboro county, but there was a decrease of 742 cwt.

#### DISTRICT NO. 1—CAPE BRETON—SUPERVISOR McLEOD

The outstanding features of the year in District No. 1, as compared with 1928, were increases in the quantities landed of haddock, pollock, herring, mackerel, alewives, salmon, smelts, lobsters, flounders, and squid; and decreases in cod, hake, halibut, swordfish, eels, and oysters.

From the standpoint of values, lobsters ranked first, cod second, haddock third, mackerel fourth, swordfish fifth, salmon sixth, halibut seventh, herring eighth, and smelts ninth.

*Lobsters.*—The total catch was 41,786 cwt. valued at \$318,348, as compared with 39,237 cwt. with a landed value of \$311,142 for 1928, an increase of 2,549 cwt. in the catch and \$7,206 in the landed value. The largest catches of lobsters were landed at Main-a-Dieu, Port Hood island, Port Morien, Petit de Grat, Aspy Bay, and Gabarus.

*Cod.*—The total cod catch was 148,322 cwt. valued at \$240,455, as compared with 153,689 cwt. valued at \$237,050 in 1928. Although the catch showed a decrease of 5,367 cwt. the landed value increased by \$3,405 as compared with the preceding year, a condition due to a greater percentage of the catch having been sold in a fresh state.

The largest landings of haddock were at South Ingonish, 31,520 cwt.; Petit de Grat, 13,237 cwt.; North Ingonish, 10,410 cwt.; North Sydney, 3,955 cwt.

*Mackerel*.—The total catch was 49,495 cwt. with a landed value of \$95,423, as compared with 27,970 cwt. with a landed value of \$60,678 for 1928. Compared with the preceding year there were increases of 21,525 cwt. in the catch, and \$34,745 in the landed value. In the section from Pleasant bay to Hawkesbury a decrease of 934 cwt. was shown, mackerel having been very scarce during September, October and November. It is remarkable that most of the catch in this district was taken in gill-nets during July and August; in former years the greater part of the catch was taken by jigging. At Pleasant bay 300 cwt. were taken in a purse seine.

The largest landings were at L'Ardoise, 6,456 cwt.; South Ingonish, 6,040 cwt.; Lower L'Ardoise, 4,482 cwt.; and Louisburg, 4,397 cwt.

*Swordfish*.—The total catch was 5,107 cwt. with a landed value of \$57,950 as compared with 6,080 cwt. with a landed value of \$85,147 in 1928. Although decreases of 973 cwt. in the catch and \$27,197 in the landed value were recorded, it is abundantly evident that these fish were quite plentiful, but the unfavourable weather that prevailed during the entire season greatly interfered with operations and resulted in the falling off noted.

The ports and districts where decreases took place are as follows: Arichat, 16 cwt.; Petit de Grat, 84 cwt.; St. Peters to Fourchu, 93 cwt.; Gabarus to Kennington Cove, 132 cwt.; Glace Bay, 181 cwt.; North Sydney, 113 cwt. Louisburg reported an increase of 342 cwt.; and Main-a-Dieu an increase of 34 cwt.

The largest landings took place at Louisburg, 3,265 cwt.; Petit de Grat, 446 cwt.; North Sydney, 431 cwt.; Glace Bay, 302 cwt.; and South Ingonish, 224 cwt.

*Salmon*.—The total catch of salmon was 3,203 cwt. with a landed value of \$44,091, as compared with 2,555 cwt. with a landed value of \$33,870 for 1928. There was a gratifying increase of 648 cwt. in the catch and \$10,221 in landed value.

The largest landings were at Margaree Harbour, 630 cwt.; Pleasant Bay, 288 cwt.; Cheticamp, 275 cwt.; Mabou Harbour, 258 cwt.; St. Ann's, 210 cwt.

*Halibut*.—The catch of halibut totalled 4,017 cwt. with a landed value of \$43,977, as compared with 4,758 cwt. valued at \$45,749, showing a decrease of 741 cwt. in the catch and \$1,722 in the landed value.

Decreases occurred as follows: Pleasant Bay to Margaree Harbour, 37 cwt.; Hawkesbury, 150 cwt.; Louisburg to Glace Bay, 66 cwt.; Lingan to North Sydney, 300 cwt.; Ingonish to Bay St. Lawrence, 148 cwt.

The decreased catch was due to scarcity of fish and to smaller landings by the trawlers at Hawkesbury, and the Lunenburg bankers at North Sydney.

*Herring*.—The total catch was 41,086 cwt. with a landed value of \$40,157, as compared with 37,999 cwt. with a landed value of \$30,298 for 1928, showing an increase of 3,087 cwt. in the catch and \$9,859 in the landed value.

The largest landings were at North Sydney, 6,160 cwt.; St. Ann's, 4,580 cwt.; Petit de Grat, 3,478 cwt.; Arichat, 1,600 cwt. and Cheticamp, 1,550 cwt.

*Smelts*.—The catch was 1,964 cwt. with a landed value of \$17,914 as compared with 1,636 cwt. with a landed value of \$18,517 for 1928, an increase of 328 cwt. in the catch, but a decrease of \$603 in landed value.

St. Ann's reported a substantial increase of 88 cwt., which was attributed to the smelts being more plentiful and to the ice forming in the estuaries in December, which enabled bag-net fishermen to begin operations earlier in the season than usual.

*Hake.*—The total hake catch was 7,365 cwt. with a landed value of \$6,077, as compared with 7,646 cwt. with a landed value of \$6,252 for 1928, showing a decrease of 281 cwt. in the catch and \$175 in the landed value.

*Oysters.*—The landings of oysters were 979 barrels with a landed value of \$3,989 as compared with 1,265 barrels and a landed value of \$6,549 for 1928, showing a decrease of 286 barrels in the catch and \$1,560 in the landed value.

The following decreases were recorded: Orangedale and River Denys Basin, 176 barrels; Nyanza, 72 barrels; Estmers, 35 barrels; Ottawa Brook, 32 barrels; Washabuck, 19 barrels; East Bay, 12 barrels.

In the Little Narrows district there was an increase of 103 barrels.

The large decrease at Orangedale and River Denys basin was due partly to scarcity of oysters, and partly to early frost and stormy weather preventing continuous operations.

*Squid.*—The total catch was 1,354 barrels with a landed value of \$2,843, as compared with 1,085 barrels with a landed value of \$1,236 for 1928, an increase of 269 barrels in the catch and \$1,607 in the landed value.

Squid were unusually scarce, except in the waters of Sydney harbour where the catch showed an increase of 555 barrels as compared with the preceding year.

*Flounders.*—The flounder catch totalled 889 cwt. with a landed value of \$933 as compared with 664 cwt. with a landed value of \$771 for 1928, a decrease of 225 cwt. in the catch and \$162 in the landed value.

All the flounders caught were taken in gill-nets in Margaree Harbour, and the catch would have been very much larger if there had been any demand for the fish.

*Shad.*—The total catch was 149 cwt. with a landed value of \$418. None were caught in 1928. Fifteen cwt. were landed at Little Lorraine and 134 cwt. in the district between Ingonish and bay St. Lawrence.

*Pollock.*—The total catch was 432 cwt. with a landed value of \$297, as compared with 290 cwt. with a landed value of \$344 for 1928, showing an increase of 142 cwt. in the catch and a decrease in the landed value of \$47.

Most of the pollock were landed by trawlers at Hawkesbury. It has been observed recently that these fish have not frequented the coast in such large quantities as in former years. Large catches used to be taken in the trap-nets at L'Ardoise, but since 1927 practically none have been taken there.

DISTRICT NO. 2—COMPRISING THE COUNTIES OF HALIFAX, GUYSBORO, PICTOU, COLCHESTER, CUMBERLAND AND HANTS—SUPERVISOR D. H. SUTHERLAND

The total quantities of all varieties of fish landed in the district in 1929 was 73,321,100 pounds valued at the boat's side at \$2,205,162 which is an increase of 383,200 pounds and \$178,153 as compared with the previous year. The greatly increased catch of lobsters of 8,884,100 pounds, compared with 6,776,400 pounds for 1928, was mainly responsible for the increase in landed value. Of the thirty-one varieties of fish taken, sixteen showed an increase in the quantity landed; these, principally, were hake, pollock, herring, lobsters, mackerel and clams. The greatest decrease was in cod—4,740,300. Haddock and soles also showed considerable decreases, due to the fact that fewer steam trawlers were operated during the year. Eight trawlers operated as compared with eleven in 1928. The inshore catches of cod, however, were considerably greater than during the previous year.

The total marketed value for the year was about the same as in 1928, being \$4,456,660 as compared with \$4,457,159. An increase in lobsters of \$313,059 and herring \$68,723 overcame decreases in cod, \$190,466, haddock, \$76,428, halibut,

\$30,632, salmon, \$56,575 and fish meal, \$43,677. It should be noted that marketed value includes the value of shipments brought into this district from outside points.

*Cod*.—The total catch was 228,611 cwt. with a landed value of \$423,075 and a marketed value of \$939,939 as compared with 276,014 cwt. with a landed value of \$496,668 and a marketed value of \$1,130,405 for 1928, showing a decrease of 47,403 cwt. in the catch, \$73,539 in the landed value and \$190,466 in the marketed value. All told, 33,382 cwt. were brought into the district from outside points in 1929 as compared with 35,600 cwt. in 1928. The values of these intershipments are included in the marketed value figures.

The decrease in catch was in Halifax county West and Guysboro county East, where, respectively, 24,023 cwt. less and 25,287 cwt. less were landed, than that in 1928. The decline was due to fewer steam trawlers operating as the shore catch in Halifax county East and all of Guysboro county showed an increase in 1929. Of the year's total catch 158,949 cwt. were taken inshore.

*Haddock*.—The total catch was 232,020 cwt., with a landed value of \$495,658 and a marketed value of \$990,209, as compared with 241,502 cwt. with a landed value of \$460,833 and a marketed value of \$1,066,637 for 1928, showing a decrease of 9,482 cwt. in the catch, \$33,825 in the landed value and \$76,428 in the marketed value. As in the case of cod, considerable quantities were brought into this district from outside points and included in the marketed value totals. In 1929, these receipts from outside the district were 12,935 cwt. and in 1928 12,168 cwt., mostly from Cape Breton island. Of the total catch during the year 23,471 cwt. were taken inshore as compared with 26,816 cwt. in 1928.

The decrease was in Guysboro county West where there were 17,409 cwt. less landed, Halifax county West showing an increase of 13,263 cwt. This change was due to fewer steam trawlers operating from Canso.

*Hake*.—The total catch was 12,070 cwt. with a landed value of \$11,675 and a marketed value of \$28,953, as compared with 7,568 cwt. with a landed value of \$7,089 and a marketed value of \$22,771 for 1928, showing an increase of 4,412 cwt. and \$4,586 in the landed value and \$6,182 in the marketed value.

The increase occurred in Halifax county West and Guysboro county West with increased catches of 4,176 cwt. and 1,000 cwt., respectively. The inshore catch was 8,568 cwt. as compared with 5,667 cwt. in 1928.

*Pollock*.—The total pollock catch was 11,639 cwt. with a landed value of \$10,708 and a marketed value of \$17,370, as compared with 6,232 cwt. with a landed value of \$6,165 and a marketed value of \$15,836, showing an increase of 5,407 cwt. and \$4,543 in the landed value and \$1,534 in the marketed value. Of the catch 1,909 cwt. were taken inshore as compared with 1,725 cwt. in 1928. The increase was entirely due to heavy offshore landings in Halifax county West.

*Halibut*.—The total catch of halibut was 6,541 cwt. with a landed value of \$84,567 and a marketed value of \$146,036, as compared with 7,051 cwt. with a landed value of \$83,355 and a marketed value of \$176,668 for the 1928 season, an increase of 510 cwt. in catch, \$1,212 in the landed value and \$30,632 in the marketed value. Of the catch, 2,001 cwt. were taken inshore as compared with 2,648 cwt. in 1928. During the year 403 cwt. were brought into this district as compared with 1,187 cwt. in 1928, which accounts for the considerable decrease in marketed value.

The decrease was almost entirely in Guysboro county East, where smaller trawler landings were made.

*Herring*.—The total catch was 72,222 cwt. with a landed value of \$74,295 and a marketed value of \$188,637, as compared with 50,241 cwt. with a landed

value of \$56,857 and a marketed value of \$118,934 for 1928, showing an increase of 21,981 cwt. and \$17,438 in the landed value and \$69,703 in the marketed value.

While the catch of 1928 was the lowest for the past five years, the 1929 catch was the greatest. The increase was due to landings in Halifax county West of 9,766 cwt., Halifax East 9,080 cwt., Guysboro East 5,778 cwt. The spring catch in Cumberland county West was only 1,225 cwt., as compared with 7,900 cwt. in 1928. Usually the catch in this section, where the fish are used for bait and hard smoking, is 16,000 cwt. In August and September there was a heavy run of herring in Halifax county, west of Halifax.

*Mackerel.*—The mackerel catch was 37,496 cwt. with a landed value of \$108,284 and a marketed value of \$156,362, as compared with 29,582 cwt. with a landed value of \$103,673 and a marketed value of \$157,460 for 1928, an increase of 7,914 cwt. with \$4,611 in the landed value and \$1,098 in the marketed value. While the catch compared favourably with the quantities taken during the past four years, it was only about half the quantity taken in 1925.

The catch in Halifax County West, a big producing section, dropped 6,500 cwt., the fall fishing being a complete failure. In Guysboro county West, where only Spring mackerel are taken, the catch was very heavy in June, 14,450 cwt. being taken as compared with 4,623 cwt. in 1928. Guysboro county East also had a heavy catch in June—7,473 cwt. as compared with 2,512 cwt. in 1928. On the other hand, the fall fishing was not good.

*Salmon.*—The total catch of salmon was 3,303 cwt. with a landed value of \$56,977 and a marketed value of \$113,526, as compared with 3,676 cwt. with a landed value of \$59,515 and a marketed value of \$170,101.

The catch was the smallest for a number of years in this district. The decrease was 373 cwt. and \$2,538 in the landed value and \$56,575 in the marketed value. Slightly more than 1,600 cwt. were imported as compared with 3,536 cwt. in 1928, and this decline partly accounted for the greatly decreased marketed value.

*Albacore.*—The total catch was 1,454 cwt. with a landed value of \$9,212 and a marketed value of \$21,810, as compared with 875 cwt. with a landed value of \$5,120 and a marketed value of \$8,750, an increase of 579 cwt. in the catch, \$4,092 in the landed value and \$13,060 in the marketed value.

This fishery was quite successful, and the catch compared favourably with that of recent years. The fishery is confined entirely to St. Margaret's Bay district and the catch is shipped to the United States market. The 1927 catch was 1,575 cwt., the largest since 1923.

*Swordfish.*—The catch of swordfish was 1,114 cwt. with a landed value of \$10,561 and a marketed value of \$31,624, as compared with 2,098 cwt. with a landed value of \$28,874 and a marketed value of \$40,227 for 1928.

Swordfishing was not successful, and there was a decrease of 984 cwt. in catch, \$18,313 in landed value, and \$8,603 in marketed value. The decrease was general along the Atlantic coast of this district. The heaviest catches of swordfish are made in Guysboro county, where the decrease in 1929 was 742 cwt.

*Flounders, Skate and Soles.*—The catch of flounders was 402 cwt. less than for 1928. Soles decreased 4,521 cwt. and skate 565 cwt., due to a smaller number of steam trawlers operating. The skate in question included marketable fish only.

*Clams.*—The total catch was 8,755 cwt. with a landed value of \$8,795 and a marketed value of \$43,441, as compared with 2,088 cwt. with a landed value of \$2,261 and a marketed value of \$12,163 for 1928, showing an increase of 6,667 cwt. in the catch, \$6,534 in the landed value and \$31,278 in the marketed value.

The increase took place in Halifax county East, where a large clam cannery is operated.

*Lobsters.*—Landings of lobsters were 88,841 cwt., with a landed value of \$813,283 and a marketed value of \$1,407,792, as compared with 67,764 cwt., a landed value of \$616,771 and a marketed value of \$1,094,784 in 1928, an increase of 21,077 cwt. in catch, \$196,512 in the landed value and \$313,008 in the marketed value.

The lobster fishery for 1929 was by far the outstanding feature and surpassed the fishery in any year back to 1917.

DISTRICT No. 3—Comprising the Counties of Lunenburg, Queens, Shelburne, Yarmouth, Digby, Annapolis, and Kings.

Total landings in the district during 1929 were 1,578,447 cwt. of fish and 22,688 bbls. of shellfish with a total value of \$4,147,430 as compared with 1,538,476 cwt. of fish and 40,720 bbls. of shellfish with a total value of \$5,970,206 in 1928, an increase of 39,971 cwt. of fish and a decrease of 18,032 bbls. of shellfish in 1929 and a decrease in the total value of \$1,822,776.

*Cod.*—The catch of cod was 920,319 cwt. valued at \$1,873,484, as compared with 1,040,379 cwt. valued at \$2,927,406 in 1928, a decrease of 120,060 cwt. in the catch and \$1,053,922 in the value.

*Haddock.*—The catch of haddock was 208,346 cwt. valued at \$388,244, as compared with 146,948 cwt. valued at \$266,529, an increase of 61,398 cwt. in the catch and \$121,715 in the value.

*Hake and Cusk.*—The catch of hake and cusk was 165,401 cwt., valued at \$127,463, as compared with 142,415 cwt. valued at \$116,945 in the previous year, or an increase of 22,986 cwt. in the catch and \$10,518 in the value.

*Halibut.*—The halibut season in 1929 was more successful than in the year previous, the catch being 20,413 cwt., valued at \$279,403, as compared with 14,161 cwt. valued at \$175,086. There was thus an increase of 6,252 cwt. in the catch and \$104,317 in the value.

*Herring.*—The catch of herring in the district was 124,427 cwt. valued at \$141,341, as compared with 78,163 cwt. valued at \$83,705, an increase of 46,264 cwt. in the catch and \$57,636 in the value.

*Mackerel.*—The mackerel catch was 20,454 cwt. valued at \$68,509, as compared with 14,048 cwt. valued at \$80,996, showing an increase of 6,406 cwt. in the catch and \$12,487 in the value.

*Salmon.*—The catch of salmon was 1,040 cwt. valued at \$24,445, as compared with 855 cwt. valued at \$19,857, showing an increase of 400 cwt. in the catch and \$4,588 in the value.

*Scallops.*—The catch was 16,856 barrels valued at \$99,670 as compared with 24,533 barrels valued at \$134,675, a decrease of 7,677 barrels in the catch and \$35,005 in the value.

*Lobsters.*—The lobster catch was 59,411 cwt. with a value of \$1,006,226 as compared with 62,242 cwt. valued at \$1,293,820 in 1928, showing a decrease of 2,831 cwt. in the catch and \$287,594 in the value.

#### FISH COLLECTION SERVICE

The Fish Collection Service inaugurated by the Fisheries Branch along the southern coast of Cape Breton Island between Main-a-Dieu and Fourchu was resumed in June, and was extended to Port Hood island in November. Eight collecting boats were employed in the service, though not all continuously.

The following is a statement of the quantity of fish carried from the several ports:—

Main-a-Dieu.....	409,670 lbs.
Bauleine.....	40,586 "
Little Lorraine.....	181,109 "
Big Lorraine.....	150,121 "
Louisburg.....	607,510 "
Gabarus.....	101,403 "
Fourchu.....	74,872 "
Port Hood.....	213,784 "
	<hr/> 1,779,055 "

The service has been of great value to the fishermen of this district, although some adverse factors were met, such as exceptionally bad weather and scarcity of fish during late summer and fall months, and cessation of operations during the time that fish were most plentiful on the coast, owing to congestion at Canso.

The service was continued along the mainland covering the same area of the coast as in the previous year, viz., from Halifax to Canso, the fish from Liscomb west being carried to Halifax and the fish from Port Beckerton east being taken to Canso. The ports of call on the two routes in this area were as follows:—

*Canso to Port Beckerton.*—Port Beckerton, Fishermans Harbour, Isaacs Harbour, Drumhead, Coddles Harbour, Larrys River, Charlos Cove, Cole Harbour, Port Felix, Whitehead and Dover.

*Liscomb to Halifax.*—Liscomb, Sonora, Marie Joseph, Ecum Secum, Necum Teuch, Port Dufferin, Jeddore, and Ostrea Lake.

Eleven collecting boats, all told, were in operation on these two routes.

For the season the results, in terms of fish carried, were as follows compared with 1928 results:—

*Canso to Port Beckerton*—

1929—3,056,967 pounds.

1928—3,322,216 pounds.

*Liscomb to Halifax*—

1929—846,970 pounds.

1928—964,963 pounds.

The decrease of 383,242 pounds in 1929 was not so much due to scarcity of fish as to the fact that during two of the best fishing periods so much fish was being brought to Canso that the firms there were unable to handle quantities and, therefore, were obliged to stop buying for these periods. The comparison is also influenced by the fact that the total carriage shown for the Liscomb-Halifax service for 1928 included herring taken from points in Halifax county West and Lunenburg county.

Three boats were in operation along the southwestern shore. The *Phyllis C* collected fish at Westport, Freeport, and Tiverton and conveyed it to Digby. This boat began operations on May 6 and continued in the Service until February 15, 1930, handling 2,212,114 pounds of fish.

The *Harvey* and *Ralph* operated in the above mentioned district, commencing operations on October 8 and continuing until January 10, during which time 587,155 pounds of fish were handled.

The *Kenneth W* went into operation on October 29 and continued until December 14, operating between Port LaTour, Cape Negro Island, Ingomar, Lockeport. During the month of November when Lockeport was over-supplied, five trips were made to Liverpool. All told, the vessel handled 141,054 pounds of fish.

## STEAM TRAWLERS

Eight steam trawlers operated as follows during the year as compared with eleven during 1928:—

Name of Vessel	Time engaged	Port operated from
<i>Good Hope</i> .....	January-March.....	Halifax
<i>Cape Agulhus</i> .....	January-April.....	Halifax
<i>Loubyrne</i> .....	January-December.	Halifax and Port Hawkesbury
<i>Rayon d'Or</i> .....	January-December.	Halifax and Canso
<i>Venosta</i> .....	January-December.	Halifax
<i>Viernoe</i> .....	January-December.	Halifax
<i>St. Cuthbert</i> .....	January-December.	Halifax
<i>Lemberg</i> .....	January-December.	Halifax

The baby trawler *Geraldine* also operated for the W. C. Smith Vessel Company, Lunenburg.

The trawler *Good Hope*, owned and operated by the National Fish Company, was sunk at the entrance of Halifax Harbour on March 16, when hit in a dense fog by a Norwegian liner.

## BROADCAST OF FISHERIES INFORMATION AND BAIT REPORTING SERVICE

The daily fisheries radio broadcast service was resumed on April 2 and continued throughout the year.

More and more vessels have added radio sets to their equipment and the broadcast service inaugurated by the department in 1927 has been considerably expanded, giving the fishermen and others interested in the fishing industry further information of interest. This service is much appreciated by the captains and crews of the bank fishing fleets, as well as by others interested in the fisheries.

The items broadcast not only included information with regard to weather conditions, ice reports, bait reports, prices paid for fish, but news items, and urgent information such as loss of life, illness in the families of fishermen, as well as other news of interest to the men of the fleet.

Information was collected by telegraph and telephone, from the fisheries officers along the coast, compiled by the Halifax office and broadcast twice daily from the Louisburg Marconi Station and the Halifax Lightship. The broadcast was also repeated on the Banks from C.G.S. *Arras* which was equipped with a new 100 watt I.C.W. Transmitter for the purpose of rebroadcasting the daily reports from the Louisburg station. The station does not reach at all times all points on the banks, and by means of the rebroadcasting service from the *Arras* all sections were reached and the whole fleet kept in touch with vital matters pertaining to the industry.

This service is only in its infancy and its future offers unlimited possibilities, which are naturally more or less dependent upon the further progress and development of radio. The ordinary fishing vessel is not equipped with wireless apparatus, and therefore cannot be reached by a wireless message, but as the vessels are practically without exception now furnished with radio sets, they can be reached by voice broadcast and their movements thereby directed by their owners. Many valuable messages of this kind have been transmitted, through this service, to various vessels at sea.

## LUNENBURG FLEET

The total catch for the Lunenburg fishing fleet for 1929 was the smallest that has been landed since the year 1924. Altogether 208,700 quintals were

landed, while in 1928 the catch went up to 225,775 quintals. The value of the catch was approximately \$2,000,000 in 1928 but for 1929 it will be considerably lower. The Summer catch in 1929 brought \$8.50 and \$9 per quintal.

The catch at LaHave and Riverport was some 25,000 quintals short of the landings in the previous year.

The catch of the frozen baiting trip for the year amounted to 30,125 quintals which was landed by 59 line trawlers. In the previous year 57 line trawlers landed 32,870 quintals on the same trip.

On the spring trip 65 line trawlers and 5 hand liners landed 55,450 quintals, while 69 line trawlers and 6 hand liners landed nearly the same number of quintals in 1928.

The catch for the summer trip by 66 line trawlers and 5 hand liners amounted to 110,950 quintals, as compared with a catch for the corresponding trip in 1928 of 135,600 quintals.

The schooner *Harriet* and *Vivian* was the high liner among the trawlers, with a catch of 4,400 quintals, but the schooners *Ronald George* and *Bessemer*, each with a catch of 4,200 quintals, were close behind.

The schooner *Eva U*, was the highest of the hand liners. The hand line fleet, which was formerly quite large has decreased, until in the 1929 season there were but five of that type of schooners operating. They had poor luck on their Spring trip, but were more successful on the summer trip, and therefore their average for the year was fair.

The frozen bait trip in 1928 was sold at \$7.50 per quintal, the spring trip brought \$8 and the summer catch \$9 per quintal. In 1929 the frozen baiting trip brought from \$7 to \$7.50, the spring trip \$8 and the summer trip from \$8.50 to \$9.

During the past two years there has been a rather unusual development in the Lunenburg Bank fleet's methods with regard to a fall Bank fishing trip. In past years when the vessels returned in September they finished until the following spring, but 17 vessels outfitted for a fall trip in 1928 and this year 12 vessels outfitted and returned to the Banks. The fish catch of this trip will not be cured and sold before next spring.

The only schooner of the fleet that was lost during the year was the *Mahaska*, which was sunk in collision with the French trawler *Remy Chuinard* during the latter part of March. Two members of the crew, John Fleet and William Hardy, lost their lives in the collision. Only four minutes elapsed between the crash and the sinking of the schooner. This is the second vessel of the Lunenburg fleet within a short time to meet this fate, as last year the Lunenburg fishing schooner *Andrava* was sunk in collision with a French trawler in Sydney harbour.

A number of schooners have been sold to Newfoundland during the past season. A number of new ones have been added to the fleet and there are new vessels under construction.

The fleet was furnished by radio with daily reports regarding ice, bait conditions, and other news of interest to the members of the crew, the information being compiled at the Halifax office.

#### FISHERIES EXHIBITION

The first fisheries exhibition of its kind in the history of the Dominion was held at Lunenburg on September 16, 17, and 18, 1929, and the success with which it was attended has inspired those responsible for its inception to greater efforts for next year. In the past Lunenburg has celebrated the return of the fishermen with a picnic or a reunion, but this year the celebration was expanded into an exhibition, and became an event of national importance.

The exhibition was officially opened by W. A. Found, Deputy Minister of Fisheries. The Fisheries Branch assisted towards the success of the fair, granting a subsidy and sending fish culture displays, etc.

The exhibits were numerous and, with very few exceptions, were all directly or indirectly connected with the fishing industry. Fish dealers displayed many varied and attractive lines of fresh, frozen, smoked and dried fish, etc. Firms dealing in ships' supplies, blockmakers, net and cordage representatives, paint manufacturers, marine engine manufacturers, dory makers, sail makers and others supplying material used in connection with the fishing industry had attractive booths.

The Fisheries Branch had several displays. One from the hatcheries of the maritimes showed specimens of live trout and salmon in various stages of development, one from the Atlantic Fisheries Experimental Station at Halifax gave a demonstration of brine freezing, while another placed before the visitors specimens of various kinds of fish taken from inshore and offshore waters. In the latter exhibit were included catfish, monkfish, skate, etc., and these, not being so familiar to the layman as other commercial varieties, which were also shown, were the cause of considerable interest and favourable comment.

The schooner race, open to bona fide vessels of the fishing fleet and sponsored by the Exhibition Committee, was won by the schooner *Margaret K. Smith*.

The Lunenburg Board of Trade and others responsible for the plans for the fair are to be congratulated on the splendid results achieved. The exhibition assumed national importance and received wide publicity. The success attending the first exhibition practically ensures its annual repetition.

#### BONUS ON HAIR SEALS—DESTRUCTION OF HAIR SEALS

The bonus for the destruction of hair seals was continued in 1929, but the amount paid per seal was reduced to \$2.50 as compared with \$3.50 during the two previous years. The number of hair seals on which a bonus was claimed by fishermen and others was 3,321. These figures do not represent the total number of seals killed in provincial waters as many were destroyed upon which no bounty was claimed, due to the inability of the killers to substantiate their claims. It is estimated that about 10 per cent of the bodies of the seals killed were lost before they could be recovered to secure the snouts which must be presented as evidence of destruction by persons claiming the bounty.

The best killing months of the year were May, June, and July. The month of June was far ahead of all others and 1,706 claims were paid on seals killed. This proved to be the month in which seals were the most prevalent along all sections of the coast. May accounted for 388 seals and July for 475.

The largest number of claims was paid in the eastern section of the mainland, while in the previous year the western section led. The seven eastern counties of the mainland accounted for 1,376 claims, the seven western counties for 1,276, and the island of Cape Breton for 669. There was little or no market for the skins or blubber and the hunter therefore realized, in most cases, only the amount received as bounty.

The total amount expended in the payment of claims was \$8,302.50, distributed as follows:—

Eastern Nova Scotia (mainland).....	\$ 3,440 00
Western Nova Scotia.....	3,190 00
Island of Cape Breton.....	1,672 50

#### COURSES OF INSTRUCTION

Courses of instruction for fishery officers, with a view to having them qualify to undertake the duties of inspection of fish, and the instruction of

fishermen in fish-curing processes, were held at the Experimental Station from March 6 to May 28. The first course began on March 6 and ended April 16. The second course covered the period from April 17 to May 28. The course was concluded by suitable examinations and tests, and those who qualified are to have their duties enlarged.

The lectures, extremely interesting and covering a number of subjects, were followed very closely by the officers in attendance. It is without question that the information given was highly appreciated by those present at the courses.

#### UTILIZATION OF FISH WASTE AND MANUFACTURE OF BY-PRODUCTS

During the year three licensed reduction works were engaged in the manufacture of oil on the island of Cape Breton:—

1. Marden Wilde Corporation, North Sydney.
2. Arthena Marie Fish Company, Ingonish Ferry.
3. Leonard Brothers, North Sydney.

In addition to the three plants operated in Eastern Nova Scotia, a new plant was installed at Pictou by Fred Magee Limited for the purpose of manufacturing lobster body meal. The plant was only operated in an experimental way, but a ready market was found for the meal as fox food. The plants operated under licence during the year were as follows:—

1. Robinson Glue Company, Canso.
2. Fasterfat Limited, Halifax.
3. C. W. Kendall, Halifax.
4. Fred Magee Limited, Pictou.

Eight plants were operated under licence in Western Nova Scotia, and all were engaged in the manufacture of oil but the Lewis Canning Company, which was engaged in grinding scallop and clam shells into chicken feed. The plants in operation during the year were as follows:—

1. H. R. L. Bill, Lockeport.
2. W. H. Goudey, Port Maitland.
3. Lewis Canning Company, Limited, Annapolis.
4. Roy Casey, Victoria Beach.
5. Parkhurst Cod Liver Oil Corporation, Tiverton.
6. A. W. Dodd Company, Limited, Westport,
7. Arthur Payson, Brooklyn.
8. Lockeport Company, Limited, Lockeport.

#### RIVER AND INLAND FISHERIES

Particular attention was paid during the year to the river and inland fisheries, as they are not only of great value from a sport fishing point of view but it is quite essential that they receive adequate protection in order to ensure a future supply of fish such as salmon, smelts, alewives, and other anadromous fish for the nets in the tidal portions of the rivers and along the coasts. Many thousands of tourists and native sport fishermen enjoy their recreation in the river and lake fisheries. More and more tourists are being attracted each year to this province on account of the opportunities afforded for sport fishing, and it is realized that their influx means a considerable source of revenue to the province.

It is discouraging to have to report that 1929 was the poorest season experienced on the Margaree river, on the island of Cape Breton, for many years, so far as salmon angling was concerned. The catch was only 274 as compared with 509 in the preceding year. The river was in very poor condition in June,

July, and the early part of August on account of the water being very low, clear, and warm. From the middle of August until the close of the season fairly satisfactory catches were landed. At Little river, Inverness county, the catch for 1929 was 95 fish, as compared with 121 in the previous year.

Trout were plentiful from May to July in the Margaree and its tributaries, and good catches were landed at lake Ainslie from July 15 to September 1. Trout were fairly numerous in North Aspy channel, Clyburn's brook, and Middle river during June. Large catches of magnificent trout were taken at St. Esprit, L'Archeveque and Catalone lake.

On the eastern portion of the mainland, particularly on the St. Mary's river, Guysboro county, and other rivers in that vicinity, salmon fishing was very good, catches being made with the fly as follows:—

	1929	1928
St. Mary's river.....	444	189
Gaspereau brook.....	35	20
Ecum Secum river.....	72	55
Country Harbour river.....	23	15
Isaacs Harbour river.....	40	35

Trout fishing in the eastern mainland portion of the province, particularly Guysboro and Halifax counties, was unusually good, and there seemed to be every indication that the annual stocking from the hatcheries is of great assistance in keeping these waters from becoming depleted, particularly waters in the vicinity of the large centres which are heavily fished. There are numerous streams in the isolated parts of Halifax county, and also Guysboro county, which are in excellent condition, and in which trout abound.

In western Nova Scotia the run of salmon up the LaHave river was particularly good, and anglers met with good success. The catch of salmon with the rod on the Medway and Mersey rivers, Queens county, was somewhat smaller than last year. This cannot be attributed to the decrease in the run of fish, but is due to the fact that the salmon do not take the fly as readily as in previous years.

A great deal of effort was expended by our officers in order to keep the rivers and streams free of obstructions, etc., so that salmon and other fish might have free access to their spawning grounds. Salmon and trout fry were planted in various waters. Fishways were constructed in numerous dams and various obstructions removed from the rivers and streams.

#### VISIT OF MINISTERS

A tour of the province was made during August by the Hon. P. J. A. Cardin, Minister of Marine and Fisheries; Colonel the Hon. J. L. Ralston, Minister of National Defence; and the Deputy Minister of Fisheries. The principal fishing centres were visited, and the party met the fishermen and discussed problems of the industry with them.

#### FISHERIES PATROL SERVICE

The *Mildred McColl* patrolled the shores of Halifax and Guysboro counties during January and was laid up on January 31 at H.M.C. Dockyard for a short period during the winter months. Before being again placed in commission the usual annual overhaul was made and she recommenced patrol work on April 15. During April and May and the early part of June she was largely confined to patrol work in Halifax county. During the latter part of June she left on a patrol from Halifax to River Philip, covering the coast waters of Halifax, Guysboro, Canso, Pictou, Colchester, and Cumberland counties. During the remainder

of the year she was largely confined to Halifax and Guysboro counties, with the exception of some work done in Lunenburg county. During the time of her employment she was engaged in preventing illegal lobster fishing, placing buoys showing dividing lines between the different lobster fishing districts, inspecting trap-nets, salmon nets, etc. Captain Williams and his crew were tireless in their efforts, and deserve praise for the efficient patrol carried on.

The *Lulu T.* was again chartered for patrolling the lobster fishing boundary line at Port Philip, Cumberland county, during August, September, and October. She was placed in commission on August 12 and laid up on October 31.

The *F.P. 1* went into commission on June 5 and was in service until December 21, 1929, during which time she patrolled 2,064 miles.

The *F.P. 1* gave a continuous and efficient patrol, destroying 527 traps and liberating 404 lobsters. The boat also salvaged 171 buoys and 2,595 fathoms of rope, which were disposed of by sales.

#### FISHERIES CRUISER SERVICE

The *Arras* was laid up at Yarmouth during March for annual repair, and was again placed in commission on April 1. The usual patrol was carried on until the middle of June, when the vessel proceeded to the Banks to join the fishing fleet.

Since 1924 the *Arras* has been fitted up as a hospital ship during her stay on the Grand Banks with the fishing fleet, and the services of a medical officer have been engaged. Dr. Webster, who has been employed in this capacity since 1925, has given valuable aid to the fishermen. Each year shows an increase in the number of calls and the number of cases treated. The report submitted by Dr. Webster covering such work during the 1929 season is as follows:—

Total number of new cases.....	335
“ “ calls.....	394
“ “ minor operations.....	43

This shows an increase of 32 over the previous season's figures.

“The outstanding observations,” says Dr. Webster's report, “were the increase of infections of the respiratory tract and the decrease in hand infections, especially of a serious character. It appears that the change in atmospheric conditions when coming to Newfoundland in the spring is the predisposing cause of the respiratory infections among the fishermen. It is hoped that the reduction of hand infections, with their incapacitating and often maiming results, will continue, due to the education of the men in the use of anti-sepsis and care of these unfortunate conditions when they occur.

“There is a large amount of investigation still to be done in the study of the infection and extensive necrosis following puncture wounds from fish bones. I must again deplore the lack of facilities on the *Arras* for the transportation and accommodation of patients,” Dr. Webster stated in his report. “This will be better appreciated when it is pointed out that one or more patients were on board the ship almost the entire summer. More active work could undoubtedly be carried on if a more seaworthy and speedy craft were placed on the service. I can only refer again to the kind and valuable co-operation of Captain Barkhouse and his officers in the medical work of the ship.”

The *Arras* returned from the Banks in September, and carried on the usual patrol work during the remainder of the year.

The *Arleux*, commanded by Captain Cousins, laid up at Lunenburg for annual repair in the latter part of January, and was ready for sea the first of March.

Excellent service was rendered by the *Arleux* through the year in ice breaking, assisting disabled vessels, patrolling the coast along the Northumberland strait district at the opening of the lobster fishing season, and in acting as a "mother ship" to the winter fishing fleet operating out of Canso and vicinity. Letters of appreciation have been received from time to time expressing satisfaction with the service performed by the *Arleux* in ice breaking, and with the assistance rendered by the vessel to the fishing fleet generally through the year.

#### LOSS OF LIFE

It is very gratifying that the Supervisor for District No. 1 reports that there was no loss of life amongst the fishermen in his district during the year.

In the eastern section of the mainland, District No. 2 the following fishermen met death by drowning while engaged in their work:—

Murray Henderson, New Harbour, N.S.

Earl Slaunwhite, Terrence Bay, N.S.

Gordon Slaunwhite, Terrence Bay, N.S.

Frank Slaunwhite, Terrence Bay, N.S.

Basil Slaunwhite, Terrence Bay, N.S.

Angus Julian, Grand Desert, N.S.

Spencer McDonald, Harrigan Cove, N.S.

In Western Nova Scotia, District No. 3 the following losses were reported:—

Rover Cleveland, Sr., and Robert Cleveland, Jr. of West Dover, schooner *General Haig*, lost their lives on March 16, 1929, while out attending to trawls.

John Fleet, Blandford, and William Hardy, Rose Blanche, Newfoundland, of the schooner *Mahaska*, lost their lives on March 22, 1929, when their vessel was rammed on the Banks by a French trawler.

Hilbert Bezanson, Dr. Kingsburg, schooner *Marion Elizabeth*, drowned while the schooner was at Canso for bait, August 10, 1929.

John Leary, Kingsbury, schooner *W. E. Knock*, was knocked overboard by the ship's boom, September, 1929 and drowned.

George Pyke and William Peddle, St. Mary's, Newfoundland; schooner *C. A. Anderson* were lost from their dory while attending trawls, July 9, 1929.

#### NEW DEVELOPMENTS

Among the outstanding developments indicative of progress in the fisheries during the year, were the construction by the fishermen of a considerable number of new boats and the enlargement and improvement of plants by several companies and firms. A new company was established on the south shore and now has one of the most up-to-date plants in Nova Scotia handling all kinds of ground fish and employing a large number of men. Installation of a canning plant for the purpose of putting on the market canned fish cakes, canned fish chowder and other canned products was carried out by one of the previously established companies. Installation of a new cold storage plant was begun by another firm and there was enlargement and improvement of an existing cold storage plant in another case. The latter company also completed the establishment of a fish meal plant. One of the larger operators installed a brine freezer for the production of rapid frozen fillets which can be turned out from the plant at the rate of about 800 pounds an hour.

Development of the use of eel-grass in the production of insulating material was also to be noted during the year. A factory for utilizing the eel-grass was operated in Pictou county producing insulating building blanket. Fishermen gathering eel-grass receive from \$14 to \$15 a ton f.o.b. shipping point.

## LICENCES ISSUED

Licences issued during the year were as follows:—

Lobster fishing.....	8,113
Lobster packing.....	115
Lobster packing (extension).....	119
Lobster pound.....	20
Salmon gill-net, or drift-net.....	693
Salmon trap-net, pound-net or weir.....	478
Salmon net permits.....	43
Smelt gill-net.....	506
Smelt bag-net.....	288
Herring weir.....	75
Drag seine.....	147
Oyster.....	228
Scallop.....	104
Reduction works.....	15
Trap-net.....	271
Cannery.....	20
Shad gill-net or drift-net.....	8
Quahaug.....	1
Angling permits.....	1,115
Certificates F. 12.....	285

## PROSECUTIONS

During the year there were fifty prosecutions for violations of the Fisheries Regulations. Five took place in District No. 1, thirty-one in District No. 2, and fourteen in District No. 3. Statements showing details in connection with the prosecutions referred to are included in appendix No.

### REPORT OF SUPERVISOR J. F. CALDER, DISTRICT No. 1, NEW BRUNSWICK, FOR 1929-30

District No. 1, New Brunswick, is made up of Charlotte, St. John, and Albert counties, and the bay of Fundy watershed of Westmorland county.

The following statement shows the catches of fish and their marketed values in the district for 1929:—

		Catch	Marketed Value
			\$
Cod.....	cwt.	19,601	50,078
Haddock.....	"	26,164	61,755
Hake.....	"	115,623	135,287
Pollock.....	"	8,466	19,774
Halibut.....	"	57	767
Flounders.....	"	861	1,837
Skate.....	"	79	98
Herring.....	"	205,505	232,822
Sardines.....	brl.	249,156	1,700,789
Alewives.....	cwt.	32,820	50,420
Dulse.....	"	7,700	10,020
Salmon.....	"	3,025	75,100
Shad.....	"	2,261	21,380
Smelts.....	"	168	2,400
Sea urchins.....	"	54	132
Clams.....	brl.	22,946	112,539
Cockles.....	cwt.	350	936
Lobsters.....	"	6,774	219,557
Scallops.....	gal.	950	1,600
Winkles.....	cwt.	103	429
Hake sounds.....	"	821	4,353
Fish livers.....	buckets	35,534	19,124
Fish oil.....	gal.	41,183	26,063
Herring oil, including waste oil from sardine canneries.....	gal.	91,420	22,446
Herring meal.....	tons	701	29,923
Fish fertilizer.....	"	428	4,760
Herring scales.....	cwt.	1,694	5,652
Fish skins and bones.....	"	100	202
Hair seals.....	"	161	161
Total.....			2,810,404

The marketed value for 1929 was \$2,810,404, as against \$2,138,860 for 1928, an increase of \$671,544. This increase, however, was, in a large measure, due to the greatly increased sardine canning output at Black's harbour; therefore, it reflects abundant prosperity in a particular line rather than in the industry generally. At the same time, while the increased market value of sardines amounted to \$416,018, the value of the output of the other branches shows a substantial increase of \$255,526.

#### COD

There was a slight falling off of the catch of cod as compared with the previous year, 19,601 hundredweights being taken in 1929, as against 22,158 hundredweights in 1928. A corresponding decrease is to be noted in the marketed value of the product, \$50,078 for 1929 and \$63,917 for 1928. Most of the cod were sold in a fresh condition, and shipped out as whole fish.

#### HADDOCK

There was a slight decrease in the haddock catch, 26,164 hundredweights being taken in 1929, as against 28,164 hundredweights for 1928. The total value of the catch was \$61,755 as against \$63,110 in the previous year. Most of the haddock in this district are sold fresh and shipped out in that condition, and as whole fish. While there was only a slight falling off in the catch, these fish were not nearly as plentiful during the fall months as they were during the same period in previous years; there was a considerable increase in the number of boats engaged in haddocking during the past fall, but the year's catch showed a decrease.

#### HAKE

A tremendous increase is to be noticed in the catch of hake for the year—115,623 hundredweights, as against 68,160 hundredweights for 1928, and 36,796 hundredweights for 1927. There was a phenomenal run of hake in the bay of Fundy waters of the district during the summer. It was a common daily occurrence for the boats to come in from the fishing grounds completely loaded, with daily catches for the single boat running from 4,000 to 10,000 pounds. Unfortunately, however, as these fish are all split and salted for the export dried fish trade, a very low price is paid to the fishermen for them. None of the fishermen cure their own catches. The amount received by the fishermen for the catch was \$70,596, about 61 cents per hundredweight. The total marketed value of the product, however, was \$135,287; but, of course, that also represents the labour that was performed in dressing, curing and drying, cost of salt, the dealers' profits, etc. It is regrettable that the entire district catch of hake has to be disposed of in this manner. They are all taken during the summer months when they are fat and in prime condition, and would make splendid fillets. It may be of interest to point out that the catch of hake from this district was about two-thirds of the catch for the whole province of Nova Scotia for 1928, but while Nova Scotia marketed 18,451 hundredweights fresh for \$23,396, and 1,356 hundredweights fresh fillets for \$12,830, and 2,984 hundredweights smoked fillets for \$32,534 and 1,603 hundredweights boneless for \$13,662, the entire catch in this district was disposed of either green-salted or dried.

#### POLLOCK

A very serious decline is to be noticed in the catch of pollock for the year, 8,466 hundredweights, as against 34,118 hundredweights for 1928. The catch for 1927, however, was only 7,693 hundredweights. The marketed value of the catch

for 1929 was \$19,774. There was no summer catch in 1929 and only a very light catch around the islands of Charlotte county in the fall. What few fish there were, were very large and fat. They were all slack-salted and dried and sold for fancy prices. Fifty-five cents per bucket was paid for pollock livers. The liver of the individual fish brought more than five cents.

#### FLOUNDERS

A very small quantity of flounders was taken, 861 hundredweights, with a value of \$1,837. They were captured with spears and hook-nets. In the adjacent waters along the coast of the state of Maine, as elsewhere on the Atlantic Seaboard of the United States, flounder-dragging is permitted. Local fishermen, of course, have knowledge of the success of this fishery in United States waters and have been anxious to have it permitted here. An order in council recently issued permits the operation of small draggers, and, no doubt, there will be a number operating next fall.

#### HERRING

There was a considerable increase in the herring catch for 1929 as compared with 1928. In the former year 205,505 hundredweights, with a marketed value of \$232,822, were taken, as against 160,312 hundredweights, with a marketed value of \$223,283, for 1929. The herring fishery of this district is largely centered in the smoked herring industry of Grand Manan island. There was a fair catch during the year and very good prices were obtained, with the result that the fishermen engaged had a fairly successful season.

#### SARDINES

A slight decrease took place in the 1929 catch of sardines as compared with last year—249,156 barrels for 1929 and 279,349 barrels for 1928. There was a large increase, however, in the marketed value of the 1929 product as compared with that of 1928. The marketed value of the 1929 output was \$1,700,789, as against \$1,284,771 for 1928. This increase in value is, in a large measure, due to the enormous pack of canned sardines at Blacks' harbour where the output was about 330,000 cases. The largest producers paid the fishermen \$10 per hoghead for all sardine herring bought by them throughout the whole season, while the canneries on the American side of the line were paying only \$5 per hoghead. The amount paid the fishermen of the district for their sardine catch during the year was \$363,804, as against \$349,555 during 1928, although the catch in 1928 was 30,000 barrels greater than that of 1929.

#### SALMON

A considerable increase is to be noticed in the salmon catch for the year, the landings being 3,025 hundredweights, with a value of \$75,100, as against 2,500 hundredweights with a value of \$56,051 during 1928.

It is very gratifying to note that the commercial salmon fishery of the district is well holding its own, and, as a matter of fact, has increased somewhat during the past twenty years. The increase in the catch cannot be attributed to improved methods of fishing, for there are no more boats and no more nets, nor longer nets operating now than were operating twenty years ago. From time to time, critics, whose information is limited to some particular locality, raise the cry that our salmon are being exterminated. Not only are the yearly catches made by the commercial fishermen of this district a complete refutation of such an assertion, but the increasingly large number of salmon that are each year finding their way to the head waters of the rivers and streams which empty into

the bay of Fundy, for the purpose of reproduction, is in itself eloquent testimony to the fact that the salmon fishery of this district is in a very healthy and satisfactory condition.

During the past summer the Department completed the fishway over the natural falls on the Magaguadavic river at the town of St. George. It is confidently expected that as a result of this fishway, a splendid sport fishery will be established on the Magaguadavic.

#### ALEWIVES

The alewives catch for 1929 was considerably greater than that of 1928. The catch for 1929 was 32,820 hundredweights, with a marketed value of \$50,420, while the catch of 1928 was 21,505 hundredweights, with a marketed value of \$35,280.

Outside of the increase in the catch for the year, there is very little to note in connection with the fishery. Most of these fish are salted, barrelled and exported to the West Indies. Owing to unfavourable business conditions in the islands where the alewives are sold, the demand has been very poor and prices low.

#### SHAD

In the shad fishery during the year the catch was 2,261 hundredweights with a marketed value of \$21,380, compared with 2,388 hundredweights and a marketed value of \$27,861 in the previous year. An encouraging feature in connection with this fishery, however, is the large run of spawn shad which have again successfully ascended the Petitcodiac river. Inspector Barnes is very diligent in protecting these fish while they are on the spawning ground. He has a force of guardians under him who maintain a continuous patrol of the river all the time the fish are there. Very beneficial results to the fishery may confidently be expected to result from such protection.

#### LOBSTERS

A decrease occurred in the catch of lobsters for 1929 as compared with the year before—6,774 cwt. in 1929, as against 7,177 cwt. in 1928. Owing to better prices, however, the fishermen received \$219,557 for the 1929 catch as against \$149,537 for that of 1928.

FISH WASTE, FISH LIVERS, FISH OIL, HERRING OIL, HERRING MEAL AND FISH

#### FERTILIZER

It may be of interest to point out that during the year over \$100,000 was received from the sale of fish livers, fish oil, herring oil, herring meal and fish fertilizer, detailed as follows:—

Fish livers.....	35,543 buckets,	marketed value \$	19,124
Fish oil.....	41,183 gallons	" "	26,063
Herring oil.....	91,420 "	" "	22,446
Herring meal.....	701 tons	" "	29,923
Fish fertilizer.....	428 "	" "	4,760

Total valuation of these by-products.....\$102,316

Both the quantity of fish livers and fish oil may appear to be large, considering the catch of fish, but the figures are correct. A person who is not familiar with certain phases of the fish business might wonder why fish caught in this section should have larger livers and produce more oil than those which may be taken elsewhere. The answer is quite obvious; the lower stretches of the bay of Fundy are excellent feeding grounds for fish; there is practically no winter line fishery; the catches are all made during the summer and fall months, when the fish are very fat and contain very large livers.

Attention may well be called, however, to the enormous quantity of fish waste which is yearly thrown away, and which ought to be converted into fish meal, fish fertilizer and oil. The enormous quantity of 4,000,000 pounds was thrown away during the past year. This, surely, constitutes a terrible economic loss to the industry.

#### CLAMS

A slight improvement is to be noted in the clam industry during the past year as compared with 1928. A few more barrels were taken in 1928 than in 1929, the figures being 23,121 barrels for 1928, as against 22,946 barrels for 1929, but the marketed value of the 1929 output was \$112,539 as against \$96,383 in 1928.

Practically all of the clams are canned—most of them on the New Brunswick side of the international boundary line.

#### MINOR BRANCHES

There is very little to note in connection with the minor branches of the industry, such as the gathering and drying of dulse, the scallop fishery, and the saving of herring scales. Only a very limited amount of business was done in these branches.

#### CO-OPERATIVES

There is only one fishermen's co-operative association in this district, the Grand Manan Smoked Herring Co-operative Association. As the name implies, the activities of the co-operative are confined altogether to the smoked herring business, both in marketing the product and in the purchase of certain supplies, such as salt and herring box-shooks. The association handles about 95 per cent of the smoked herring output from Grand Manan island, and marketed over \$150,000 worth of the product during the year.

This co-operative association has been of great benefit to the smoked herring industry of Grand Manan. For a few years previous to its organization, the smoked herring business was in a demoralized condition, in so far as marketing conditions were concerned. The object of all appeared to be to dispose of their stocks as quickly as possible, no matter what the returns might be. This unfair competition and price-cutting had the obvious result of producing little, if any, profits to anyone concerned.

The co-operative adopted the plan of regulating the export of the product from the island, sending to the markets, at all times, such quantities as they could fairly well assimilate. The old policy of dumping all the goods on the market at the one time was superseded by a new order of regulated marketing. The operations of the association have been successful from the first, and have been the means of putting hundreds of thousands of dollars in the pockets of the Grand Manan fishermen. The chief market for their product has been in Haiti; but, owing to poor business conditions there, as well as political disturbances, the demand during the past year or more was unfortunately very light.

The herring are smoked principally during the months of August, September and October. They are thoroughly well salted and smoked and, under ordinary conditions, can be held over for a whole year. This is what the co-operative is striving to do, but with the slow sales of the present time, the problem of financing the co-operative so that the goods can be held over is a very serious one. At the request of the directors of the co-operative the supervisor for the district attended a general meeting of the association last summer and later presented their representations to the Department. Later in the season he accompanied the Deputy Minister to another meeting of the association.

## REMARKS

On the whole, there was an improvement in the fishing industry in the district as compared with the few previous years. This is reflected in a new spirit of hopefulness and co-operation among the fishermen. During the summer, prominent fishermen, and persons connected with the industry at Deer island, organized a Board of Trade as a means of promoting the commercial welfare of the section. Early in the fall, a Board of Trade was also organized on Campobello island, with headquarters at Wilson's beach. The latter organization, among its other activities, has taken up the matter of the resuscitation of the Charlotte County Fish Fair Association, which was probably, for many years, the first and only purely fish fair in the Maritime Provinces. The exhibition will be held at Wilson's beach early in September. On the invitation of the Campobello Island Board of Trade, Dr. M. M. Coady, Promoter of Fisheries Organization for the Fisheries Branch, delivered a very able and interesting address before a banquet held by that body, in connection with the meeting of the organization of fishermen's associations.

Unfortunately, some few localities such as Deer island and the Lepreau section, had very poor runs of sardine herring, which is their principal fishery, and did very poorly. On the other hand, line fishing centers like Wilson's beach, Beaver harbour and North head, did very much better than they had done for a number of years past. More new boats, and bigger and better boats, were built at Wilson's beach last winter than during any other winter for the past eight or ten years.

The great drawback of this section is in the methods of curing and marketing the fish. Cod and haddock are shipped out in a fresh condition as whole fish, while the hake, pollock and a portion of the cod are split and salted and then shipped out either green-salted or sun-dried. Very little labour is employed in such operations. There is a wonderful opportunity here for a great development in the fishing industry, provided the necessary steps are taken to organize it along modern lines and instal a chain of rapid-freezing, filleting, finnan-haddie, mild-curing establishments. This, of course, would not only put more money directly into the pockets of the fishermen, but it would also provide employment for the surplus shore population.

The following tables cover licences, certificates and prosecutions during the year:—

Kind of Licence	Number
Herring weir.....	650
Lobster fishing.....	414
Lobster pounds.....	7
Permits to dig clams.....	95
Cannery.....	11
Salmon drift-net.....	95
Shad gill-net.....	47
Seine permits.....	7
Reduction works.....	4
Scallop.....	20
Confiscations.....	64
Prosecutions.....	12

## REPORT OF SUPERVISOR A. L. BARRY, DISTRICT NO. 2, NEW BRUNSWICK, FOR 1929-30

District No. 2 embraces the fishing in the rivers and coastal waters of the five eastern counties of New Brunswick—Westmorland (Northumberland strait side only), Kent, Northumberland (except the Northwest and Southwest Miramichi), Gloucester and Restigouche. The value of all the fisheries for the calendar year 1929 was \$228,376 more than for the previous year. The follow-

ing table shows the catch and landed value of the different fisheries for 1929 and 1928 respectively:—

	1929		1928	
	Catch	Landed Value	Catch	Landed Value
	cwt.	\$	cwt.	\$
Lobsters.....	75,946	641,051	50,793	487,321
Smelts.....	47,238	493,454	59,502	572,779
Salmon.....	13,865	213,495	9,472	135,532
Cod.....	176,618	314,655	150,704	243,420
Oysters.....	13,636	79,027	12,383	81,823
Tomcods.....	22,554	38,808	17,266	25,044
Herring.....	239,504	130,607	175,512	98,063
Clams and quahaugs.....	5,137	7,584	6,937	10,752
Mackerel.....	13,529	25,287	18,611	34,780
Alewives.....	5,160	2,670	665	445
Hake.....	11,404	8,354	10,566	11,363
Haddock.....	1,457	2,018	714	1,492
Shad.....	1,487	4,135	3,718	11,974
Flounders.....	23	42		
Trout.....	97	1,940	88	1,760
Bass.....	128	1,713	201	2,179
Eels.....	104	684	320	1,926
Mixed fish.....	107	107	96	106
Hair seals.....	692	1,730	795	1,988
Halibut.....	142	1,116		
		1,949,135		1,720,759

*Lobsters.*—It is most gratifying to be able to report a very great increase in the catch of lobsters, amounting to over 25,000 cwt. This increase may be attributed to the fair weather for fishing throughout the season and the cessation of illegal fishing in the close season which, three or four years ago, undoubtedly accounted for a great deal of the catch of which there was no record in the annual statistics. In 1929 there were packed 27,763 cases, as compared with 19,478 in the previous year, an increase of over 8,200 cases. There was also a considerable increase in the "shipped in shell". Owing to the respect for the close season and the interest taken by the fishermen in the protection of the berried lobsters, there does not seem to be any need for worry about the future of this industry. One hundred and eleven canneries were operated in comparison with 113 in the year 1928.

*Smelts.*—There was a decrease of somewhat over 12,000 cwt. in the catch of this fishery. This is explained largely by the fact that very few smelts were taken at the opening of the season on November 25 of last year. One explanation given by the fishermen is that there was no heavy easterly storms during the fall to drive the fish food on the shore; consequently, as the smelts found their food well off shore, they did not feel any necessity of coming into the rivers and harbours of New Brunswick. This is somewhat borne out by the report that large quantities of smelts were to be found around the Magdalen Islands. However, the decrease is only the ordinary fluctuation from year to year and need cause no uneasiness with respect to the future of this part of the fishing industry. Dealers report that it is just as well that a big catch was not taken, for, if such had been the case, the price of smelts would have had to drop, owing to the stocks carried over from the previous year and held in cold storage in United States. Prices during the fall average about twelve cents per pound. The quality of the smelts was not as good as in 1928-29, but yearly variation of this kind is not unusual. Considerable loss was caused the fishermen in Miramichi bay owing to the breaking away of large fields of ice which carried fishing rigging with them.

*Salmon.*—The yearly report of 1928 showed the salmon fishery as being the poorest catch in many years, or about 50 per cent of the 1927 catch and amounting to only 9,472 cwt. In 1929 this increased to 13,865, a considerable increase, but the catch is still below normal. Good prices were paid, however, which tended to equalize the situation somewhat. In the bay Chaleur and Restigouche waters, the catch was even below that of 1928, but this was due to the fact that the fishermen in that area, who generally cease fishing about July 20, missed an enormous run, locally called the "St. Anne run," which struck in Northumberland strait and bay Chaleur during the first week of August. Some of the trap-net fishermen of the Miramichi got practically their summer's catch out of this tremendous run and there is no doubt that had the Restigouche and bay Chaleur fishermen been fishing they would also have benefited. As the drift-net fishing in Northumberland strait ended on July 31, all of this catch was taken by the set-net fishermen, which made up to them, in a great measure, for the poor catch which they had experienced during the previous two months. The fall run of salmon, commencing early in September, was the largest reported along the shores in many years. All streams were teeming with salmon, many of them brooks which never before were seen to have more than a stray salmon or two in them.

The grilse run was also the largest in many years. It started about June 15, and kept up until along in September, a condition not previously recorded. Usually, the grilse run starts about the second week in July and lasts for about three weeks at the most. These two factors, the enormous fall run of salmon and the heavy and prolonged run of grilse, would seem to portend splendid salmon fishing in 1931. In spite of the heavy fall run of salmon and the good price there was very little illegal fishing during the close season, owing to the strict check kept on the localities where illegal fishing generally occurred and to the fact that a close check was kept on the shipping points.

Throughout the summer complaints were received from fishermen all over the district about a condition of the salmon. Many were observed to have white spots on the back of the head, varying in size from a 5 cent piece to a 25 cent piece. In these cases there were bruises around the head and, in a few instances, one eye was missing. The spot on the head is explained as a parasitic growth. One explanation of the bruises is that the irritation from the growth caused the salmon to knock its head against obstructions. Many fish had to be culled on account of this injury.

*Cod.*—There was an increase of about 26,000 cwt. in cod catch over the previous year, accounted for chiefly by the open fall which permitted fishing right into November. The price for dried cod was the best for many years, running as high as \$10.50 per quintal for the equivalent of No. 1 Gaspe cured.

Following up a start made the year before, an instructor and demonstrator in cod splitting and drying was employed in Gloucester country throughout the summer and fall. The result of his work the year before, and the high prices commanded by fish packed under his supervision, created an immense interest among the shore fishermen. The Caraqueet fleet, however, consisting of about 125 vessels, did not desire the instructor's services, but it was gratifying to note, in the fall, when the dried fish were being bought and graded by the buyers, that many of these vessel fishermen changed their opinions. The fleet have asked that an instructor be sent with them during the season of 1930.

*Oysters.*—There was an increase of 1,300 barrels over the previous year in oyster landings but the value was not as great. The market was reported rather slack, due to the ungraded quality of oysters which had to compete with the graded stock from United States. Two new areas for prospective leases on

barren bottoms were staked out by fishermen. The main difficulty in connection with leases seems to be the lack of capital necessary to build up the bottom with gravel and shells and the procuring of small oysters for seed.

*Tomcods.*—There was an increase of over 5,000 hundredweights in tomcod catch, with a corresponding increase in value. This is accounted for by the fact that the smelt fishing season opened on November 25 last year and allowed for the taking of a very heavy run of tomcods on their way up the rivers to spawn. Usually the bulk of the catch in this fishery is taken from about January 25 to February 15 but such was not the case last year. During February, 1929, the market was so poor that the fishermen, being unable to sell their catch, ceased fishing before the close of the season. As these fish are only worth \$1 to \$1.50 per barrel the lack of the market did not create any great difficulty.

*Clams and Quahaugs.*—There was a decrease of 1,800 barrels with a corresponding decrease in the landed value, due in part to the fewer fishermen engaging in the industry. Six canneries were operated for the packing of these shellfish.

*Mackerel.*—There was a splendid run of these fish and the quality was excellent. The decrease in catch is explained by the poor market.

*Alewives.*—Although the market was still off on alewives there was a very great increase in the catch over 1928, which showed the poorest in many years.

*Hake and Cusk.*—This fishing showed a slight increase in catch. Conditions for fishing were good.

*Haddock.*—The haddock catch was about double that of 1928, but the landed value fell off somewhat.

*Shad.*—Most of the shad taken are caught by salmon nets and the run lasts for about two weeks. The 1929 catch was less than 50 per cent of that of 1928 and the proportionate value was not as large as that of last year.

*Trout.*—The trout catch remained about the same as in the previous year and the value was proportionately the same.

*Bass.*—There was a decrease of 73 hundredweights for which no explanation is known.

*Eels.*—The catch of eels was about one-third of that of the previous year. This is not an important fishery in this district so the decrease in catch did not create any hardship.

*Halibut.*—This is the first year that this fishing figured in the statistics of district No. 2; 142 hundredweights were taken, mainly in the Caraquet district.

*Hair Seals.*—Bounties of \$1,732.50 were paid for 693 seal noses compared to \$1,988 for 795 noses in 1928. It would seem that these animals are getting scarcer. In 1928 the payment of bounties had to be stopped in mid-summer owing to the appropriation being all expended. Last year, while there was money available for bounties, it was not all taken up. There were not so many complaints about salmon being destroyed by hair seals, hence it would seem the bounty system for hair seal extermination is proving effective.

#### ANGLING

Good trout and salmon angling was reported throughout the year. Grilse were particularly plentiful and provided good sport for many fly fishermen.

## PROTECTION

A much better sentiment prevails among the fishermen of the district with respect to proper protection of the different fisheries. During the past three or four years very strict enforcement of the fishery laws has been maintained by an efficient staff of guardians backed up by three patrol boats which were stationed at centres which previously gave trouble. When the boats were first employed some fishermen showed considerable resentment at their activities, and gave the crews very little support. Last year, however, they seemed to consider these patrol boat crews as friends, placed there to give them protection and not to persecute. Much information was passed along to the boat crews by the fishermen themselves. The splendid lobster catch of last year is credited by the fishermen to the activities of the patrol boats during the previous two years.

## CONFISCATIONS AND PROSECUTIONS

The activity of the officers and guardians and of the patrol boats is shown in the number of confiscations, there being forty-one more than in 1928. Sale of confiscated property amounted to \$539.60.

There were thirty-eight prosecutions during the year compared with fifty-four in the year before. They were for offences as follows:—

Breach of lobster regulations.....	13
Breach of oyster regulations.....	3
Breach of salmon regulations.....	19
Breach of smelt regulations.....	3

Fines during the year amounted to \$368, exclusive of costs.

## EDUCATIONAL WORK

As a result of the course given at the Fisheries Experimental Station, Halifax, early last year the officers who attended were able to give much good advice to the fishermen as to improved methods of caring for and curing their fish. The fishermen, on the whole, seem in a receptive frame of mind to receive instruction. This was particularly noted in the cod fishery where many fishermen, who formerly did not take the trouble to do so, now bleed their fish when caught. Instruction has been given also in the pickling of herring and mackerel, with good results. Owing to the many duties of the inspectors, they cannot give the fishermen as much time as is desired for work of this kind, and it is hoped that an increase in the number of specialists in education may be possible.

## BRINE FREEZING

A new plant, put up at Richibucto last summer for the making of brine frozen fillets, will be equipped and ready to carry on this year. This should prove a great boon to the village, which, on account of being off the main line of communication, was in the past not able to dispose of its catch of fresh cod or haddock advantageously.

## FISHERIES ORGANIZATION

Within the past three or four years four organizations for fishermen have been started in this district, namely, the Restigouche Salmon Fishermen's Association, the Gloucester Fishermen's Association, the Alnwick Fishermen's Association, and the Hardwicke Fishermen's Association.

These organizations are getting ready to enter the larger organization of the Maritime Fishermen's Association now in process of being formed. So far their activities have been confined to a body that could speak as one voice to the department in matters respecting the different fisheries of their respective districts.

## LICENCES

During the year 9,929 licences were issued as compared with 10,360 in 1928. The 1929 total was made up as follows:—

Smelt bag-net licences.....	5,940
Smelt gill-net licences.....	290
Oyster fishery licences.....	964
Bass fishery licences.....	56
Lobster fishery licences.....	1,834
Salmon trap-net licences.....	391
Lobster pound licences.....	6
Cannery licences.....	6
Gaspereau fishing licences.....	51
Lobster packing licences.....	111
Lobster packing extension licences.....	67
Quahaug fishing licences.....	76
Salmon drift-net licences.....	136
Herring weir licences.....	1
	<hr/> 9,929

REPORT OF SUPERVISOR H. E. HARRISON, DISTRICT No. 3, NEW BRUNSWICK, FOR  
THE YEAR, 1929-30

District No. 3, New Brunswick, includes the counties of Kings, Queens, Sunbury, York, Carleton, Victoria, Madawaska and the non-tidal waters of the Northwest and Southwest Miramichi rivers in Northumberland county.

In the calendar year 1929 the fishermen had a fairly satisfactory season generally. On March 2, a newspaper of St. John reported the first river-caught gaspereau on sale in that market, but it was not until April 19 that this fish was reported being taken in this district, at Gagetown, and on April 25, a good salmon was taken in the St. John river above Fredericton. The first shad reported was at Gagetown on May 20. The earliest freshet was not as high as usual but the weather turned wet and disagreeable and on May 6th the St. John river was at its highest for the season, and then fell away fast. Conditions were very similar in the Miramichi district. Shad and gaspereau were running into the Miramichi river in large numbers by June 4th.

The total weight, and value to fishermen, of the catches of commercial fish for the years 1928 and 1929 are as follows:—

1928.....	5,938 cwt.	\$36,176
1929.....	10,845 "	51,929

The marketed value in 1929 was \$56,177 as against a value of \$37,835 in 1928, an increase of \$18,342. The only class of fish in this district showing a difference in value, as between that to the fishermen and as marketed, is the salmon of the Miramichi river area, which showed an added value of \$4,248. The individual catches and values were as follows:—

## ALEWIVES

1928.....	1,988 cwt.	\$ 3,589
1929.....	6,280 "	10,355

Prospects of a better market for alewives was the reason for fishermen in the Miramichi area making greater efforts to take a fairly large quantity in 1929, and the fact that men had been trained to make inspection of pickled fish no doubt encouraged dealers to have greater faith in the output.

Price was not very satisfactory, either to fishermen or to dealer, but a market, even at a low price, meant the distribution of considerable money

throughout the area and the fishermen prepared to take advantage of it. It will be observed that the increase was 4,292 hundredweights and only two hundredweights of that was in the St. John river area. Considerable expansion could, and would, be made in the latter area if a paying price could be assured, and a considerable expansion still could be made in the Miramichi river area. Nineteen twenty-seven produced 9,144 hundredweights, nearly all in the latter area. Alewives were in fine condition in 1929 and there appeared to be enormous quantities in the rivers. Only the lack of an assured market, at a fair price, keeps the quantity taken as low as it is. The quality of this fish should not deteriorate greatly in the short time it takes it to reach the fishing areas of the St. John river, after coming through the cold water of the bay of Fundy.

## BASS

No bass were reported from the Miramichi area and only eight hundredweights in the St. John river area in the past year. Sea bass ascend the St. John river at least ninety miles and an occasional one is taken in salmon nets. I saw one during the summer of 1929 that weighed 36½ pounds.

## EELS

1928.....	420 cwt.	\$ 1,800
1929.....	140 "	450

A decrease of 280 hundredweights in catch and \$1,350 in the value of eels, as between 1928 and 1929 was shown. Both weight and value in 1929 were down to approximately what they were in 1927. A proportionate decrease is shown in both the Miramichi and St. John river waters. Salmon and shad fishermen in the St. John river area would be pleased if eels should vanish altogether from the waters as they are destructive on those fish, when nets are set and fixed to pickets.

## MULLETS

1928.....	365 cwt.	\$ 1,095
1929.....	284 "	852

A decrease of 81 hundredweights in catch and \$243 in value was shown in the mullet fishery in 1929. Possibly this had something to do with the decreased catch of eels, as mullets are used largely as bait for eel pots.

## PICKEREL

1928.....	450 cwt.	\$ 5,850
1929.....	333 "	4,259

The pickerel fishery fell off considerably in both weight and value in 1929. During the season fishermen said that the water was too low and stagnant for good pickerel fishing. An occasional rain and rise in the water stirs this fish up and makes better fishing. The lesser catch probably means more breeders left, and possibly better fishing in 1930. It will be noted that no pickerel are taken in the Miramichi waters. The reason would be interesting to know.

## SALMON

1928.....	585 cwt.	\$ 12,603
1929.....	1,130 "	25,271

An increase of nearly 100 per cent in the quantity of salmon taken in 1929, and a more than 100 per cent increase in value, should be quite satisfactory. While every sub-district showed an increase some of the sub-divisions are not good salmon fishing areas at any time. Those sub-divisions usually counted on for fair-to-good catches show a most gratifying return. The Miramichi river area shows an exact 100 per cent increase in 1929 over the year 1928 and 1927, but the periods in which salmon were taken in the trap-nets shows a marked difference. In 1928 the catch for the months of June and July was 187 hundred weights and for August it was 50 hundred weights, while in 1929 the catch for the months of June and July was 127 hundredweights and in August it was 344 hundredweights. During the 1929 fishing season the rivers remained low for a considerable period but some salmon and a large number of grilse ascended both the Northwest and Southwest rivers and some of their tributaries. Then, early in August, immense numbers of salmon came in. In 1928 the rivers were fairly high during June and salmon came in in fairly large numbers that month. Reports from the local officers in the St. John river area indicated that salmon were running in large numbers and the 1929 season was the best in many years, producing 658 hundredweights, at a value of \$16,775 to fishermen. In looking back over a period of eleven years it is found that the nearest to that amount was in 1921, when 575 hundredweights were taken, and the lowest amount in that period was 355 hundredweights in 1923. Analyzing the sub-district catches it is seen that in 1929 the lower St. John river area considerably more than doubled the 1928 catch. York county, in the central area, part tidal and part non-tidal water, produced 83 hundredweights more than in 1928, while Carleton county, all non-tidal water, produced practically double the amount taken in 1928. This is an excellent showing, and one that did not appear to affect the success the anglers had last season in York, Carleton and Victoria counties, as the catches of salmon by anglers was 153 hundredweights, as against 87 hundredweights in 1928.

## SHAD

1928.....	2,015 cwt.	\$ 8,056
1929.....	2,616 "	9,545

A betterment of 601 hundredweights of shad over the 1928 catch is shown, and an increase of more than 150 per cent over the quantity taken in 1927. The increase is made by greater catches in Overseer Bell's sub-district, St. John river area, and in Overseer Parks' sub-district, Miramichi river area, and largely in the latter; the St. John river area showed an increase of 73 hundredweights in 1929. Considering the quantity of shad taken, the financial return to fishermen is comparatively small. In the St. John river area the value is only from \$6 to \$9 per hundredweight and in the Miramichi river area the local officer gives it as only \$2 per hundredweight, less than the price paid for mullets used for baiting eel pots. The Washademoak lake area again was the high spot in the St. John river area, and a good many shad reached the upper part of the St. John river (Grand Falls).

## STURGEON

1928.....	67 cwt.	\$ 2,345
1929.....	29 "	725

The sturgeon fishery fell back to about where it was in 1927. No particular reason for this condition is known.

## DOMESTIC FISHERIES

1928.....	710 cwt.	\$ 12,830
1929.....	736 "	13,845

A reported betterment in 1929 of 26 hundredweights and \$1,015 in value took place in the domestic fisheries. The combined approximate weight and value of the commercial and domestic fish taken in this district in 1929 were 11,581 hundredweights and \$65,774, not a bad showing for a wholly inland area, with many, and large, nets taking their toll outside. The value of materials used by anglers is valued at, approximately, \$19,620 in 1929, and the combined values—commercial and domestic—is placed at \$48,566. In the Miramichi river area the approximate quantity of salmon taken by anglers is 120 hundredweights and 55 hundredweights of trout in 1929, and in 1928 it was 119 hundredweights of salmon and 90 hundredweights of trout. The salmon are very largely young fish; small grilse, not much larger than the trout taken; mostly sea-trout, on the average, with a fairly large salmon caught at odd times. I saw one salmon weighing 37 pounds taken by an angler on the North Branch of the Southwest Miramichi river last season. That was an exceptionally large fish; larger than any I ever saw come out of the St. John river, I think, and salmon in the latter river average considerably larger than the fish in the Miramichi water. The quantity of salmon taken by anglers on the Miramichi is not large when one considers the expanse of that great river and its many tributaries frequented by this fish. New sporting camps are being erected along those waters each season and harder fishing will be carried on year after year, so long as salmon ascend them. A deal of money is left there by non-resident anglers and much more would be left if salmon came in in greater numbers. Practically every mile of the river (the Southwest) is open to any person to fish who is willing to spend a few dollars for guides, food, and camp comforts. Regarding salmon angling on the St. John river and its tributary, the Tobique, it gives very great satisfaction to be able to report conditions much better than those of 1928. The local officers report the quantity of salmon taken by anglers as being double that of 1928, approximately 65 hundredweights in that season and 130 hundredweights in the 1929 season, 70 hundredweights of that amount being taken on the Tobique river. A very large proportion of salmon taken on the St. John river were undersized fish, running about six pounds to the fish. This is somewhat unusual, the average usually being about 10 pounds. The anglers complained that the large fish would not rise to the fly, or, rising, usually escaped—the reference is to the salmon pool at Hartt's island. Very similar conditions prevailed at the pool at the mouth of the Becaguimac river, at Hartland, Carleton county, while in the vicinity of the mouth of the Tobique and in the outlet of that river, Victoria county, a good proportion of the fish were fairly large salmon, running about 12 pounds to the fish. All of the anglers on the Tobique reported plenty of salmon and grilse in 1929, but the river was low much of the season, and the weather dry and warm; consequently, fish did not rise as they do under different conditions. More than 300 fish were taken at Hartt's island pool, York county; about 90 fish at the Hartland pool, Carleton county; and more than 500 were taken in the vicinity of the Tobique, on the St. John river, and in the outlet of the former, in Victoria county, in addition to those taken on leased or private waters of the Tobique. All but the latter water is open to the public for salmon angling.

There was a decrease of about 25 hundredweights in trout taken. In 1929 the season was very hard on brook trout. The season was so dry many of the smaller streams went practically dry and the general report was that numbers of trout were found dead, and those remaining had a hard time, being gathered in small pools and with little or no food. That condition may affect the supply of trout for a time.

## PROSECUTIONS

Twenty-six prosecutions were conducted by the local officers and myself during the calendar year, for various violations, and cases against a few offenders, who could not be apprehended in time, were carried over until the beginning of the new year. One person for whom a warrant was issued left the province. The sum of \$225 was paid in fines, and another \$100 in fines is in the hands of a magistrate to be paid to the Receiver General on April 1, 1930. Fines amounting to \$150 were suspended. Six offenders paid costs amounting to \$250, including the prosecuting attorneys' fees, and the informations were withdrawn. Costs paid by the other offenders amounted to \$168. Seven of the cases were for water pollution and nineteen for illegal fishing.

## CONFISCATIONS

Seventy-five confiscations were made during the year. The materials consisted of 122 nets of various types, an automobile, boats, spears and torches, and salmon. Anything that was worth taking care of was stored, for sale later, or was sold immediately. Materials, at a nominal value, worth \$150, were destroyed. Materials, some of which were seized during the 1928 season, were sold, the revenue being \$173. The fishery overseer in the Miramichi area has much trouble with poachers and would-be poachers for salmon. Of the seventy-five seizures and confiscations in District No. 3 in 1929, sixty of them were by Overseer Parks and his fishery guardians, and of the 122 nets, of types, seized eighty-one of them were in this officer's district. If the poachers had to buy new nets every time they lost one they would not be able to carry on with such persistence, but it is stated that they buy partly used nets—\$2 for a net long enough for a poacher to use—and when observed by the officer or his guardians the poacher will drop the net and get away, usually, and his loss is not great. Nothing but apprehension and a severe penalty seems to deter the poachers in that area, and the officer and his guardians, to be successful, must be constantly on watch.

## FISHERY LICENCES

The following licences and permits were issued during the year:—

Kind of licence	1928	1929
Salmon gill-net or drift-net.....	122	112
Salmon net permit.....	159	160
Salmon pound-net, trap-net or weir.....	102	100
Shad gill-net or drift-net.....	270	249
Gaspereau Pound-net or trap-net.....	8	16
Bass fishery licence.....	40	36
Sturgeon fishery licence.....	10	11
Smelt gill-net licence.....	1	1
Whitefish fishery licence.....	14	15

## REVENUE

Revenue from all sources during the year was as follows:—

Licences and permits.....	\$450 25
Prosecutions (fines).....	225 00
Sale of seized materials.....	173 00
Total.....	\$848 25

Credit should be given to the overseers, and a very large majority of the fishery guardians, for their active assistance during 1929.

# REPORT OF SUPERVISOR S. T. GALLANT, PROVINCE OF PRINCE EDWARD ISLAND, AND THE MAGDALEN ISLANDS FOR 1929-30

The total marketed value of the fisheries of Prince Edward Island for 1929 was \$1,427,152. The following table shows the production and marketed values:—

Kinds of Fish		Quantity	Marketed Value
Cod.....	cwt.	50,160	115,852
Haddock.....	"	1,759	5,557
Hake and cusk.....	"	24,638	43,541
Herring.....	"	51,541	95,123
Mackerel.....	"	9,194	42,081
Salmon.....	"	27	595
Smelts.....	"	9,489	104,974
Cod oil.....	gal.	9,985	3,157
Caplin.....	brl.	177	547
Eels.....	cwt.	62	642
Tomcod.....	"	2,244	5,799
Clams and quahaugs.....	brl.	4,275	13,261
Lobsters and lobster products.....	cwt.	76,360	943,464
Canned.....	cases	28,399 $\frac{3}{4}$	(686,938)
Sold in shell.....	cwt.	18,944	240,219
Tomalley.....	cases	670	8,807
Shelled meat.....	cwt.	75	7,500
Oysters.....	brl.	4,928	49,030
Scallops.....	"	120	600
Tongues and sounds.....	cwt.	84	1,735
Hair seals.....	No.	478	1,194

## COD

There was an increase of 13,308 hundredweights in the cod and an increase in value. The catch by counties was as follows:—

West Prince.....	14,883 cwt.
East Prince.....	821 "
Queens.....	20,749 "
Kings.....	13,707 "

During the season Mr. George Earl, of Nova Scotia, an expert in the dressing and curing of fish, was employed by the Department to give instructions to fishermen on the proper method of dressing and curing fish. Those who followed his instructions were successful in securing better prices for their fish. Mr. Earl received large orders from the American markets for properly cured fish, but, on account of the limited quantity of this fish on hand, it was impossible to fill them. Had these orders been filled, the price for pickled fish would have been 1½ cents greater than obtained.

All of our officers have taken a course in the proper method of handling fish and are now fully competent to give instructions to the fishermen. Attention should also be given to the production of boneless cod. A large quantity of this kind of fish is imported from other provinces to supply the demand in this province; this should not be, as this is a branch of the industry that could be developed sufficiently to supply at least the demands of the province itself. Some boneless fish was put up by a number of fishermen, who received instructions from Mr. Earl, and these were equal to the best on the market. It now rests with the fishermen to do their part and the fishery officers will give them every assistance possible.

## HADDOCK

There was an increase in the haddock catch of 763 hundredweights, with an increase in value. The catch by counties was as follows:—

Queens.....	159 cwt.
Kings.....	1,600 "

Haddock are practically all sold fresh and are in great demand by the consumers. They command a higher price fresh than cod.

## HAKE AND CUSK

In the catch of hake and cusk there was an increase of 12,713 hundredweights and an increase in value. The catch by counties is as follows:—

West Prince.....	5,338 cwt.
Queens.....	2,846 "
Kings.....	16,454 "

This fish is consumed locally, for the most part, and a fair price is realized. In 1929, some were filleted, for the first time in this province, and it is to be hoped that this industry will be developed further this season.

## HERRING

There was an increase in the 1929 herring catch of 4,090 hundredweights, and an increase in value. The catch by counties was as follows:—

West Prince.....	16,895 cwt.
East Prince.....	8,092 "
Queens.....	7,746 "
Kings.....	18,808 "

A large quantity of the herring caught in Prince Edward Island is used for fox feed. Pickled herring is consumed locally for the most part, while some sales are made in New Brunswick. It is hoped that this season all pickled herring will be inspected by the fishery officer.

## MACKEREL

There was a decrease in the mackerel catch of 1,003 hundredweights with a small increase in value. The catch by counties was as follows:—

West Prince.....	2,799 cwt.
East Prince.....	354 "
Queens.....	5,119 "
Kings.....	922 "

## SALMON

There was a decrease of 28 hundredweights in the salmon catch and a decrease in value.

## SMELTS

The smelt catch decreased by 3,633 hundredweights, and there was a corresponding decrease in value. The catch by counties was as follows:—

West Prince.....	695 cwt.
East Prince.....	2,955 "
Queens.....	4,908 "
Kings.....	931 "

## CLAMS AND QUAHAUGS

There was an increase in the clam and quahaug catch of 1,726 barrels, and an increase in value. A large quantity of the quahaugs landed in 1929 were canned by a Charlottetown firm; they were of a superior quality and in good demand.

## LOBSTERS

There was an increase of 10,747 hundredweights in the lobster catch, and a corresponding increase in value. The catch by counties was as follows:—

West Prince.....	16,446 cwt.
East Prince.....	16,244 “
Queens.....	14,559 “
Kings.....	29,111 “

The increasing catch should be an incentive to the fishermen to see that every berried lobster is liberated very gently into the water, for if they are thrown in, it is not known how many eggs may be injured and to what extent the industry may suffer as a result.

There are four co-operative canneries in this province operated by fishermen; two of these packing companies have a large membership and are doing exceedingly well. In these companies each fisherman owns his own gear, such as boats, lines and traps, and it naturally follows that he is more careful in keeping his equipment in good condition; generally speaking, they land a larger catch than those engaged by other packers.

## OYSTERS

In the oyster catch there was an increase of 172 barrels, with an increase in value. The catch by counties was as follows:—

West Prince.....	10 brls.
East Prince.....	110 “
Queens.....	4,771 “
Kings.....	37 “

The catch might have been much greater had not the buyers refused to accept small oysters. This action on the part of the buyers, however, resulted in the shipment of a much better quality of oysters from this province in the 1929 season and a ready market was obtained for them.

The Department during the year 1929 carried on work in oyster culture in Grand and Bideford rivers, Prince county, and in East river, Queens county. The industry will profit. Bideford river is now well stocked with oysters and should give good results in the near future. Percival river is also well stocked and a good yield within the next two years is expected.

During the season an area in East river, which was formerly a good producing area but in latter years was overrun with mussels to the extent that the fishermen gave up fishing on this bed, was cleaned. An enormous quantity of mussels was taken from this area and landed at Mount Stewart. These shells will be in perfect condition next year to prepare some new area, and in this way the oyster fishing grounds will be considerably enlarged. In the channel of the river there is an area of some two miles in length, ranging in width from 150 to 200 yards; on this area the small oysters are so numerous, apparently, that there is an insufficient supply of food for them. Were these small oysters transplanted on growing areas, no doubt in a year or two great results would follow, as has been proven by individual experiments on the part of the fishermen. This river is one of the greatest prospects for oyster culture in Canada, or, possibly North America. The same condition also applies to West river. Vernon, Seal and Orwell rivers are also well stocked with small oysters and the future of these rivers seems assured.

## SCALLOPS

There was a decrease of 200 barrels in the scallop catch and a decrease in value. Alberton is the only point where this fishery is conducted on a commercial basis. The spring catch was about the same as in previous years, but the fall

catch was a complete failure, due to the fact that, during the summer, the scallops died in the bed. This applied to all the scallops areas around the province.

## FISHERIES PROTECTION SERVICE

During the 1929 season there were eight patrol boats in the Protection Service, and with their assistance and that of the fisheries inspectors and guardians, attempts at illegal fishing were successfully suppressed; in fact, outside of one point, illegal fishing was practically nil.

Total number of confiscations covering violation of the Fisheries Regulations during the season of 1929, covering 100 seizures, were.....	46
Total number of prosecutions.....	12

## REMARKS

On account of the very dry season and the low water supply, the mills could not allow much water to go through the fishways at Laird's, Campbell's, Dixon's and Vernon river milldams. When the water is not permitted to run through fishways they dry up, the seams open and they leak for a time.

## CAPITAL AND EMPLOYMENT

The total capital invested was \$870,777, which covers lobster canneries, vessels, nets, wharves, lobster traps, ice houses, small fish houses, etc. The number of employees were:—

Number of females.....	641
Number of males.....	2,769

## MAGDALEN ISLANDS

The total marketed value of the fisheries in the Magdalen Islands for 1929 was \$704,688, an increase of \$60,338, over the preceding year. The following table shows the total catch and marketed values:—

Kinds of Fish		Quantity caught	Value marketed
			\$
Cod.....	cwt.	65,976	168,791
Cod oil.....	gal.	10,385	5,390
Seal oil.....	"	5,220	1,863
Herring.....	cwt.	135,261	129,329
Mackerel.....	"	21,522	72,530
Eels.....	"	110	770
Smelts.....	"	2,455	26,540
Clams.....	brl.	2,455	14,730
Lobsters and products.....	cwt.	22,564	274,160
Sold in shell.....	"	2,570	{ 31,224 }
Canned.....	cases	9,782½	{ 237,084 }
Tomalley.....	"	494½	{ 5,852 }
Hair seals.....	No.	1,440	2,564
Fish meal.....	tons	77	4,750
Fish fertilizer.....	"	1,000	1,000
Fish skins.....	cwt.	200	561
Shelled grit.....	tons	6	210
Other products.....	Fish dinners.....	cases	300
			1,500

## COD

There was a decrease in the cod catch of 24 hundredweights, with an increase in value of \$14,781.

## HERRING

Herring catch increased by 25,689 hundredweights and there was an increase in value of \$30,242. The herring fishery is very valuable to the Magdalen Islands, chiefly for lobster bait purposes and for hard smoked herring. The smoked herring put up is of a first-class quality as is evidenced by the fact that there is a steady increase in the output and a good demand on the markets of the world.

## MACKEREL

There was an increase in the mackerel catch of 702 hundredweights, and an increase in value of \$3,182. These fish are pickled and sold chiefly in the West Indies markets. The bulk of the fish are caught in the early spring, and only a low price is realized for them. Probably it is unlikely that there will be an increase in the summer catch, especially with handlines, until such time as there can be an international understanding arrived at whereby all fishing is suppressed until after the spawning period. Mackerel caught in the fall are fat and are among the finest fish in the sea.

## SMELTS

There was an increase in the smelt catch of 2,292 hundredweights, with an increase in value of \$25,572. It is strange about smelts this season—the only place they appeared plentiful was around the Magdalen Islands, out in the middle of the gulf. It is thought that on account of not having any heavy storms during the summer to wash their food ashore, the smelts remained out in the gulf and to this fact may be attributed the small catch in the lakes and streams of the Maritime Provinces. The marketing of smelts from the Magdalen Islands is a problem that will have to be solved if these fish continue to be taken in large quantities; as they are being marketed in the fresh state, it is very necessary to forward them to market from day to day. This is impossible under the present system of transportation. Some smelts were lost last season as the time between shipments was too great. One way out of the difficulty might be the establishment of a refrigeration plant of sufficient capacity to preserve the catch until the cold weather, say, December.

## CLAMS

There was a decrease in the clam catch of 320 barrels, and an increase in value of \$1,920.

## LOBSTERS

There was an increase of 337 hundredweights in the lobster catch but a decrease in value of \$18,047. This decrease is due to lower prices being received for the canned product. In the 1929 season there was a much larger quantity sold in the shell, and it would not be surprising if this branch of the industry were to increase from year to year, keeping in line with the Maritime Provinces in this regard. In the Magdalen Islands we find the best equipped lobster canneries in Eastern Canada and the products of these canneries are of first-class quality. There has been a small increase in the catch from year to year, and this may be attributed to the fact that no fishing is allowed in the lagoons, which are some 28 miles in length and no doubt afford a resting place for young lobsters where they are allowed to grow unmolested. Another factor is that no illegal fishing of any kind is carried on, which speaks well for the people of the islands, who evidently understand the value of preservation of this wonderful industry.

## SEALS

There was a decrease of 214 in the seal catch and a decrease in the value of \$849.

## REMARKS

Navigation with the Magdalen Islands in 1929 opened about the first week in May, and, as usual, the ss. *Lovatt* with her captain and crew gave entire satisfaction in every particular.

## CAPITAL INVESTED

The total capital invested in the Magdalen fishing industry in 1929, covering vessels, nets, lobster traps, wharves, ice houses, small fish and smoke houses, lobster canneries, etc., was \$714,945. The figures as to employees follow:—

Total number of females.....	309
Total number of males.....	2,666

### REPORT OF SUPERVISOR J. B. SKAPTASON, PROVINCE OF MANITOBA, FOR 1929-30

The total commercial production of 1929 of all fish in Manitoba was 33,021,400 pounds, and was the highest annual production on record, exceeding that of 1928 by 2,288,800 pounds. While this is a very substantial increase, it must be admitted there was very material and important increase in production activities. The number of men employed increased from 4,172 to 4,693, fishing tugs and fish carriers from 16 to 21, sail and row boats from 938 to 1,182, gasoline craft from 118 to 152, and gill-nets increased by more than 11,000, or fully 20 per cent. The ever increasing use of gasoline boats of all sizes is perhaps the most potent agency responsible for the heavy increase in production from year to year, together, of course, with the ever increasing number of fishermen operating. The price paid to fishermen in 1929 was \$417,511 greater than in 1928 and the marketed value \$445,678 greater than 1928.

The following figures show the fluctuations in catch and value as marketed of the principal varieties of fish for the two years, 1928 and 1929:—

	1928		1929	
	Quantity	Value as marketed	Quantity	Value as marketed
	cwt.	\$	cwt.	\$
Catfish.....	1,018	10,096	116	1,205
Goldeyes.....	10,642	67,807	11,105	82,046
Mullets.....	11,657	23,797	16,767	32,755
Perch.....	1,521	17,326	932	11,799
Pickarel.....	101,870	921,010	94,055	988,563
Pike.....	36,371	154,550	54,919	225,277
Saugers.....	4,104	28,795	8,181	63,478
Trout.....	945	10,112	2,108	22,255
Tullibee.....	89,068	480,159	84,043	586,655
Whites.....	49,899	473,032	58,903	616,604

The following figures give by years for the past six years the production and number of men employed:—

Year	Quantity	Value to fishermen	Value as marketed	Number of men employed
	cwt.	\$	\$	
1924.....	177,898	886,421	1,232,563	2,828
1925.....	191,329	1,059,655	1,424,682	3,390
1926.....	304,143	1,744,234	2,296,875	3,800
1927.....	322,908	1,462,352	1,977,766	4,095
1928.....	307,326	1,620,986	2,199,027	4,172
1929.....	330,214	2,038,497	2,634,705	4,693

The following figures show the variations in market prices during the past six years:—

	1924	1925	1926	1927	1928	1929
Catfish.....	11.1	10.6	11.3	12.3	9.9	10.4
Goldeyes.....	4.4	4.2	4.0	4.7	6.4	7.8
Perch.....	10.6	11.2	13.4	10.9	12.7	12.7
Pickereel.....	8.5	11.5	10.3	8.0	9.0	10.5
Pike.....	3.5	4.0	4.0	3.7	4.0	4.1
Sturgeon.....	50.0	40.9	51.6	53.9	57.5	40.0
Trout.....	10.0	9.0	11.0	10.9	10.8	11.1
Tullibee.....	3.6	4.1	5.9	4.0	5.4	7.0
Whitefish.....	9.5	9.5	9.0	8.5	10.5	10.5
Total catch.....	6.9	7.4	7.6	6.1	7.2	7.9

It will be seen that general increases in prices are recorded all along the way, with the very important increase of a cent and a half per pound in prices of both tullibee and pickereel. The importance of this to the trade is obvious, as these two varieties of fish constitute more than half of the total production.

#### REVIEW OF OPERATIONS

*The Sub-district of The Pas*, comprising all waters in the province north of and including the Big Saskatchewan river, but no part of lake Winnipeg.

Railway extension and road making have brought a great many new waters within reasonable distance for profitable fishing operations; thus some twenty-eight lakes and rivers have been fished during the past year as against seventeen of the year before, with sixty-one more men fishing in 1929 than 1928, and resultant increase in production from 1,385,400 pounds to 1,937,500, an increase of over half a million pounds. During the current winter-fishing season some thirty-eight lakes are being fished.

In view of the fact that many of the waters in this sub-district are little known to the public, it may be of interest to give here some facts concerning them, taken from Inspector Stevenson's report:—

*Sturgeon Winter Operations.*—Three new waters and localities were tried out last winter for sturgeon in northern Manitoba: Fox river, a tributary of the Hayes; Angling lake, east of the Nelson in the Angling river; Red Sucker creek, emptying into God's river. The sturgeon from Fox river and its tributaries were small, dark in colour and of generally poor quality, but fairly plentiful. Sturgeon from Angling lake were of splendid quality, much larger than those from Fox river, averaging more than twenty-five pounds dressed, but they were not very plentiful. The sturgeon brought in from Red Sucker creek were also of fine quality, large and light in colour, and were fairly plentiful. Transportation from all these waters is most difficult, particularly from Red Sucker creek. Mr. Wass, who fished and handled the fish from Red Sucker creek, brought the fish by dogs to his trading post at Island lake, then by horse teams to Norway House, from there by pony and toboggans to Mile 137 Hudson Bay Railway, in all over 300 miles.

Cedar lake did fairly well: three natives with a few old nets produced over 3,000 pounds.

Only eleven licences have been issued for 1929-30 sturgeon fishing. The slump in prices, owing to considerable importation of Russian sturgeon, has brought the price offered down from 55 cents and 60 cents to 35 cents and 40 cents in three years. This has discouraged many operators where transportation difficulties were great.

Fishing for scale fish during the year was generally successful with almost one-third more men fishing. The catch per man was practically the same as 1928, and prices were materially higher throughout the season. This latter condition is, in many quarters, attributed to the existence and operation of the Fish Pool. Lake Athapapuskow, Clearwater, Cormorant, Williams, and Wedge produced their respective limits for the winter season 1928-29.

Of the new lakes operated for the 1928-29 season, Wedge lake was perhaps the best producer; the limit here was taken, mostly in fine-quality jumbo whitefish, well before the end of the season.

Wabiskok (Balsam) lake, with only three men fishing, produced nearly the limit (25 tons), mostly in large whites, with a few trout and pickerel.

Embury and Manistickwan lakes, close to the Flin Flon river, did not produce their limit. The catch consisted mostly of large whites, 10 per cent of a fine variety of trout, and some large pickerel.

Elbow lake on the Grassy river chain produced fairly well in whites, trout, and pickerel.

Kipahigan (Barrier) lake shows splendid indications. Fished only experimentally last winter, the production consisted mostly of a fine type of whitefish, not many jumbos, but an average of over three pounds; there were also a few tullibee. In the present winter season two good outfits went in there and the limit was practically taken by the end of December.

The following are a few of the new lakes fished this season, winter 1929-30, for the first time:—

*Chicken lake*, a small lake north of Kississing.

*Kisseneu*, a long narrow lake running from the Saskatchewan boundary to south of Kississing; fish plentiful—trout, whites, and tulibee.

*Schist lake*, parallels the Flin Flon railway for fifteen miles, fish not very plentiful; but the lake will produce the limit for the 1929-30 winter season, owing to the comparatively large number of men fishing and the easy transportation facilities. Good whitefish and trout predominate here. There are also pickerel. This is one of the deepest lakes in the north, having a depth in places of about 300 feet.

*Snow lake*, a small lake northwest of Herb lake; good fishing, mostly whitefish.

*Payak, Nistoo, and Noosap*, made up of a chain of small lakes running into Athapapuskow, all producing fair quantities of large whites and pickerel.

*Sissipuk lake* is on the Churchill river, and the Manitoba-Saskatchewan boundary runs through it. Fair fishing is indicated. The lake has no trout, but catch mostly whites, with some tullibee and pickerel. This water, however, is not proving up to expectations. Being a good-sized lake, deep, and never having been fished before, much was expected of it, but the catch is no better than in many of our lakes that have been fished for years.

*Election lake* is south of Cranberry. A fair catch is being made, nearly all jumbo whites, in the 1929-30 winter season.

*Hassett lake*, about fifteen miles east of the Sherrit-Gordon mines, is a small lake, only about four miles long, but very deep. One man there had caught 100 boxes of trout by the middle of January, 1930, and no other kind of fish. He trapped there five years ago, and then caught for his dogs both suckers and tullibee, which now seem to have entirely disappeared or become extinct. He concludes the trout have cleaned them up. There is a larger lake

to the east with plenty of rough fish in it, but the creek normally connecting these two lakes has gone dry during a series of dry years, which may account to some extent for the shortage of rough fish in Hassett lake.

*Bartlett lake*, south of Kississing, consists of several narrow stretches of water, mostly deep. There is fair fishing—whitefish, pickerel, and tulibee.

*Aimie lake*, north of Athapapuskow, yields a fair catch of whitefish and pickerel.

*Hunting lake*, north of the Churchill river, is a good-sized lake about thirty miles long. Only one licence was issued there for the 1929-30 winter season, but it is reported a good whitefish lake.

*Loon-head lake*, north of Reed lake, is said to contain whitefish and trout.

*Nokomis* is a small lake southeast of Kississing lake, where there is a fair catch of whitefish, pickerel and pike.

*Russic Lake*, north of Kississing, is a small deep lake, with fair fishing for whitefish, pike and pickerel. This lake is noted for its large pike, and jumbo whites.

*Pakwa Lake* is on the Grassy river, and reputed as a good whitefish lake.

Many of these small lakes that have no dependable feeders will hardly support extensive continuous fishing. A peculiar feature of some of them is the large size of the fish found. In one small lake, just over the Saskatchewan boundary, the smallest whites were between six and seven pounds. Many of these lakes are in what is called the "Mineral Belt," and the bottom is all rock. The inspector is of the opinion that the food supply in them is poor for bottom feeders like whitefish, and cites in support of that view his own experience of last winter, when he opened up large numbers of whitefish and found nothing in their stomachs excepting minnows, unnatural in the case of whitefish. Most of these lakes are deep but fish are seldom caught in deeper water than forty feet.

Summer operations were carried out on Moose lake during the 1929 summer, but, owing to low water, a great deal of difficulty was experienced in getting the catch out. However, the limit was taken and marketed in good condition. There was also a small amount of summer fishing permitted and carried on in lakes adjacent to the Flin Flon and Sherrit-Gordon mining properties. The catches were all for local consumption.

### *Lake Winnipegosis*

The summer operation on lake Winnipegosis resulted in the limit of whitefish and pickerel being taken in four weeks, instead of the seven weeks fishing season. The catch actually over-ran the limit about 80,000 pounds. There were twenty-six more men fishing than the previous year. So it may be said that the catch per man did not materially differ from that of 1928. The winter catch shows a very material increase all along the line, with thirty-five more men fishing. There was an increase of 1,357,600 pounds, which works out a fully 3,000 pounds for each man fishing, more than the individual catch of 1928. This, however, is hardly a fair conclusion, and is accounted for, at least in part, by seasonal and weather conditions. In the early winter of 1928-29, there was very little snow, so that little fish was hauled in off the north end of the lake to Mafeking, leaving much of the early catch on the lake until after January 1, 1929, and this quantity was therefore credited to 1929. Last fall conditions were fairly normal so that fish could be brought in as soon as caught. It may, therefore, be said the actual winter seasons catch will be pretty well on a par with 1928.

## Lake Winnipegosis comparative figures:—

—	1928				1929			
	Whites	Pick- erel	Mixed fish	Num- ber men	Whites	Pick- erel	Mixed fish	Num- ber men
	cwt.	cwt.	cwt.		cwt.	cwt.	cwt.	
Summer.....	1,323	8,668	1,561	183	2,215	9,348	1,727	207
Winter.....	5,422	16,204	23,140	407	7,831	17,86	33,735	442

*Waterhen and Dauphin*

*Lake Waterhen* shows no appreciable difference in the two years, 1928 and 1929.

*Lake Dauphin* had an exceptional year in 1929, producing 1,460,000 pounds of fish, of which 846,300 pounds were pickerel. In 1928 the catch was 384,400 pounds when the pickerel landings were 204,400 pounds. The number of operators on this lake increased in 1929 from 47 to 168; and for the current winter season this is increased to 260. It will be noticed that the increased production is slightly greater proportionally than the increase in men fishing. In 1925 the production was only slightly in excess of 100,000 pounds for 24 men. This was reduced in 1926 when 25 fishermen produced only 87,600 pounds. It was then thought the lake was practically depleted, but 1927-28-29 have witnessed a marvelous revival, culminating in the high mark reached in 1929. The theory is generally accepted that the gains are due to migrations from lake Winnipegosis in the high water years of 1927-28. Following are comparative figures for Lake Dauphin:—

—	1926	1927	1928	1929
Number of fishermen.....	25	21	47	168
Total production.....	cwt. 876	cwt. 2,313	cwt. 3,844	cwt. 14,600
Catch per man.....	35	110	82	87

*Manitoba and St. Martin*

*Lake Manitoba* records a slight decrease in production in 1929 but with 34 fewer men fishing than in 1928, the average per man was higher for 1929 by 100 pounds. The following are five years' figures for Lake Manitoba:—

—	1925	1926	1927	1928	1929
Number of fishermen.....	905	1,128	1,126	1,082	1,043
Total production.....	cwt. 51,587	cwt. 85,256	cwt. 77,856	cwt. 57,463	cwt. 56,625
Catch per man.....	57	76	69	53	54

From outward appearance the 1929 figures would appear fairly satisfactory, but the facts revealed on review are that the totals were bolstered by substantial gains in all the lower grade varieties, such as suckers, pike, saugers and tullibee, while the catch of the more valuable pickerel and perch in 1929 were

barely half of the total for the previous year. The pickerel catch dropped from 2,248,800 to 1,133,000 pounds. There can be little question the general concern felt for the future of this valuable lake is fully justified.

*Lake St. Martin*, with nine more men fishing, had a slightly increased production in 1929 but fully in proportion to the added number of operators. Pickerel, however, showed a sharp decline in catch.

### *Lake Winnipeg*

A decrease in production of 611,400 pounds, with 282 more men engaged than in 1928, was shown on Lake Winnipeg. The following are the comparative figures for 1928 and 1929:—

	1928					1929				
	Whites	Pickerel	Tullibee	Other fish	Men	Whites	Pickerel	Tullibee	Other fish	Men
Summer.....	26,538	32,407	30,739	8,251	1,483	25,116	34,774	25,666	15,096	1,564
Winter.....	4,355	16,772	41,568	8,269	691	7,762	9,756	32,729	11,886	892
Total.....	30,893	49,179	72,307	16,520	2,174	32,878	44,530	58,395	26,982	2,456

There is no outstanding difference between the two years. It will be seen there was a falling off in both tullibee and pickerel in 1929 in spite of the increased number of men fishing, and the increased number was almost entirely in men in these two fisheries. The most serious showing is in that of winter tullibee, with a drop of nearly 900,000 pounds, although there was an added number of fishermen, 201, all of whom were tullibee men.

There was considerable increase in winter production of whitefish. This was due entirely to some large outfits operating in northern areas of the lake, Eagle and Horse islands.

Pike showed a very important increase in summer from 342,300 pounds to 1,070,500, or a gain of 728,200 pounds. Saugers more than doubled. The principal decreases were in catfish, goldeyes and tullibee.

In spite of the per-man drop in production, fishermen had a fair year, owing to the higher prices that generally prevailed. It may be noted that the companies operating for summer whitefish raised the price, which had been set for more than ten years, from 5 cents to 5½ cents to fishermen. Other prices were also slightly higher in open water fishing. This was particularly marked in tullibee fishing which resulted in practically the same total paid to fishermen in 1929 for 500,000 pounds less fish than in 1928. The big spread in prices as between 1928 and 1929, however, come in lake Winnipeg's winter tullibee from 4¼ cents to 8¾ cents. Such fancy prices as 11 cents to 12 cents were quoted for the early fish on the market. This dropped, however, as the season advanced, resulting in the above average. No doubt supply and demand and shortage of ciscoes were the chief causes for the high prices paid, but there was another element which, no doubt, was an important factor in the early high prices paid—the Fish Pool. The Pool's aim was to hold up prices on as high a level as possible. While before the end of the season they suffered perhaps more than any of the other selling agencies, and had to carry over a bigger load than any of the others, that condition may be attributed to several causes.

### DEVELOPMENTS IN 1929

It was mentioned in my last report that a new concern was preparing for operation on lake Winnipeg—the Lake Manitoba Fisheries. This company had

been established on lake Manitoba for some years but, with its resources augmented by New York capital, it established itself in Selkirk during the year. A very fine plant was built and a steel hull oil burning tug as a fish carrier. The company operated quite extensively during the late summer and in the fall pickerel and tullibee fishing.

As indicated by the increased number of tugs and gasoline boats, there has been considerable expansion on lake Winnipeg amongst independent operators, who have acquired fish carrying boats capable of handling from 100 to 300 boxes of fish. These boats are variously equipped with gas, oil or steam engines.

The Fish Pool, or Manitoba Co-operative Fisheries, completed its first year of operation at the end of August, 1929, and during that initial year handled 2,987,632 pounds fresh; 7,008,499 pounds frozen; total, 9,996,131. This quantity was from 477 pool members and 200 non-members. Of the upwards of ten million pounds of fish handled, 9,400,000 pounds were of winter production. The total winter production for the province for the same period was 21,300,000, so it will be seen the pool operations came within 10 per cent of being half of the total production.

The feeling seems fairly general that experience gained by the pool during its first year has fully justified the movement for co-operation; only inexperience in management of such large affairs have caused the pool to fall short of fullest expectations in results.

#### HUDSON BAY RESOURCES

A quick trip visit was made to the Churchill at Hudson Bay during the late summer, the object being to ascertain what available information there was relative to the fisheries of the bay and the estuaries of the big rivers. A special report was made to the department, in which a recommendation was made to send a properly equipped trawler from the outside to investigate conditions in the deeper areas of the bay.

Along the Manitoba coast line and entering the rivers, there appear to be two important varieties of fish, the Arctic trout and herring or ciscoes. The former centre on the Churchill, while the latter seem more plentiful towards the Nelson, also whitefish although these fish are apparently not very plentiful. There are also to be found indefinite indications of both cod and halibut, but nothing to base a conclusion on whether or not these are indigenous to the waters of the bay.

Speckled trout run up the Nelson as far as Kettle rapids during August and September, and are to be found during these months in the streams between these rapids and tide water. They seem to disappear sometime before freeze-up, and it is thought they go out to sea.

#### ANGLING LICENCES

Non-resident angling licences almost doubled during the year, rising from 1,113 to 2,039. The particulars follow:—

1,689 one day licences.....	\$	1,689
201 two day licences.....		402
24 three day licences.....		72
125 season licences.....		625
	\$	2,788

These licences were sold almost entirely to North Dakota Americans, and were used mostly on Oak lake, lake Killarney and Rock lake, and some small lakes in the Turtle mountains. Pickerel and pike are the principal attraction. The first named has become fairly plentiful in some of these waters as a result of transfers of fry from Gull Harbour hatchery.

## PROSECUTIONS

There were forty-seven prosecutions in the province during the year for infractions of the regulations as follows:—

For using illegal contrivance.....	10
For using illegal mesh.....	13
Fishing without licence.....	9
Non-resident angling without licence.....	6
Possession in close season.....	4
Fishing in fishway.....	2
Fishing in closed season.....	3
	<hr/> 47 <hr/>

There were 131 confiscations in the province for the year.

The amount received in fines was \$589, and from the sale of confiscated articles, \$1,335,26; or a total of \$1,924.26.

### REPORT OF SUPERVISOR G. C. MacDONALD, PROVINCE OF SASKATCHEWAN, FOR 1929-30

During the calendar year 1929 the commercial fisheries production for the province of Saskatchewan was 61,260 hundredweights. This was a decrease of 671 hundredweights from the previous year. The increase or decrease by species in 1929 was as follows:—

	Increase	Decrease
	cwt.	cwt.
Whitefish.....	2,367	
Trout.....	70	
Tullibee.....	435	
Sturgeon.....	11	
Cisco.....	22	
Pike.....		1,239
Pickereel.....		219
Mullets.....		1,085
Goldeyes.....		26
Mixed.....		1,007
	<hr/> 2,905 <hr/>	<hr/> 3,576 <hr/>

The total marketed value of the commercial production during the year was \$572,830, an increase over the previous year of \$10,027. This increase in value is attributed to the increase in production of whitefish shipped in a green condition and bringing a more profitable return to the producer.

There was a small increase in production of whitefish on Jackfish, Turtle, Brightsand, Makwa, Ministikwan, des Isles, Flotten, Keeley, Peter Pond, Fox, Knee, Dore and Big Bear lakes, and in lakes in the northeastern portion of the province under the supervision of Manitoba. Small decreases took place at Murray, Pierce, Toy, Churchill, Deep River, Isle a la Crosse, Wolf, Green and La Ronge lakes.

The bulk of the net decrease shown for pike was on Isle a la Crosse lake and waters located in the northeastern portion of the province. On other waters there were minor decreases or increases, due to some extent to the nature of operations. On some lakes fishing opened about the first of the winter season, when fishermen used shallow nets and operated in shallower waters pending the freezing of the deeper portions of the lake, with a larger production of coarse fish as a result. On other lakes operations were late in opening up owing to

fishermen being unable to reach the lakes because of poor ice conditions, and this allowed nets to be set in the deeper waters where the proportion of the coarser species was considerably less.

#### UNSPAWNED WHITEFISH

On a number of waters the fall operations did not open up until well on in December, and even on lakes where the season opened on December 16 a considerable quantity of unspawned whitefish were taken. This condition was more noticeable than in any previous year and was attributed to the unusually mild weather prevailing up to about December 1, when a sudden lowering in temperature formed a thin covering of ice, and was followed by a heavy fall of snow. This blanket prevented the lowering of the temperature in the water, with the result that the whitefish were late in spawning. This unusual condition may affect the production in a future season.

#### SUMMER PRODUCTION

The summer production was 1,731 hundredweights with a market value of \$16,253, being a decrease of 726 hundredweights of fish and \$10,751 in value from the previous year. Turtle lake showed an increase of 269 hundredweights, Okemasis lake 150 hundredweights, Des Isles lake 13 hundredweights, and Churchill river 180 hundredweights. (This latter district was previously credited to Manitoba.) There was a decrease of 207 hundredweights in Makwa lake catch and 984 hundredweights in the case of Long lake owing to there being no summer fishing allowed; and 106 hundredweights of coarse fish on the Saskatchewan river, owing largely to low waters. The summer production has been gradually decreasing owing to the closing of operations during the summer on lakes situated within reasonable distance of the railroad, and when the production is being marketed green during the winter season and bringing a more profitable return to the producer.

#### GREEN FISH

The total shipments of unfrozen fish during the winter season was 3,874 hundredweights. Of this amount 3,826 hundredweights were whitefish, 44 hundredweights pickerel and 4 hundredweights trout. This was an increase over the previous year's figures of 950 hundredweights—an increase of 954 hundredweights of whitefish, 18 hundredweights of pickerel and a decrease of 16 hundredweights of trout and 6 hundredweights of tullibee. On Jackfish and Murray lakes, where the limits are 150,000 pounds and 35,000 pounds, respectively, the entire production of whitefish was marketed in a green condition, except 1,000 pounds frozen. This was largely due to these lakes being situated on the rail. Other lakes from which green fish was shipped were Turtle, Waterhen, Makwa, Brightsand, Ministikwan and Des Isles. A horse haul of up to 75 miles to the rail head was entailed in this instance.

#### EQUIPMENT

The value of equipment used during the year was \$121,910, an increase in value over 1928 of \$3,348. An increase of 1,384 gill nets valued at \$2,689 was shown. There was an increase of one gasoline boat, valued at \$290, and an increase of \$295 in the value of row boats. There was a decrease of 81 lines, a condition due to the fact that no hook fishing was allowed in the lakes in the Qu'Appelle valley, where it was found too many of the angling species had been taken.

## CONDITION OF FISHERIES

The general condition of the fisheries throughout the province could be considered as favourable. No new lakes were opened up during the year; it was arranged to cut trails to waters north of Isle a la Crosse, but the unusual weather conditions were unfavourable. A start was made on the opening of a winter trail from Nipawin to Dechambault and Ballantine lakes, and the projection of railways in that area will bring a number of valuable fishing lakes within reasonable reach of the rail head.

Favourable results from the planting of whitefish in Jackfish and Okemasis lakes were plainly noticeable, and considerable quantities of these fish are now taken from both these waters. The catch of cisco from Quill lakes is increasing.

The only waters south of the North Saskatchewan river where commercial production is carried on are the chain of lakes in the Qu'Appelle valley, where the total production in 1929 was 34,000 pounds.

While the fall operations were late in opening up, owing to poor ice, the general climatic conditions were favourable, and a surplus of freight teams were available. Fish were removed from the ice rapidly and hauled to the rail head.

## OBSERVANCE OF REGULATIONS

During the year there were 98 prosecutions and a conviction was obtained in all cases except four. Penalties amounting to \$693 were imposed with additional court costs against defendants of \$256.20. The summary of cases follows:—

Fishing during closed season.....	17
Fishing with illegal apparatus.....	41
Fishing without a licence.....	22
Illegal possession of fish.....	9
Fishing in prohibited area.....	5
	<hr/>
	94

There were also 122 confiscations made during the year, as follows:—

Legal apparatus.....	46
Illegal apparatus.....	48
Illegally caught fish.....	28
	<hr/>
	122

There were 56 sales of confiscated articles during the year, realizing \$563.97.

## FISHWAYS AND DAMS

Practically no changes can be reported as to fishways and dams. The dam of the Canadian National Railways on the Carrot river near Melfort has been abandoned as the town of Melfort constructed an elaborate dam about one-half mile down stream to provide a water supply for the town. This dam created a pool of water which is backed up to the Canadian National dam. This pool would appear likely to become an ideal water for fish when other conditions improve.

## DOMESTIC NET FISHING

There was a total production of 29,493 hundredweights fish taken under domestic net licence, an increase over the previous year of 14,044 hundredweights. The increase was largely due to the inclusion of fish taken from waters in the extreme northeastern portion of the province, which was credited to Manitoba in previous years. There was an increase of 83 in the number of domestic licences issued.

## ANGLING

The estimated catch taken by anglers as reported by the various Fishery Inspectors during the year was 22,114 hundredweights of all species of fish. This was a decrease from the previous year of 178 hundredweights. The estimated number of anglers reported was 47,663, an increase over 1928 figures of 4,323. The average catch per angler was 46 pounds of fish, a decrease of 6 pounds per angler from the previous year. Angling for trout recently planted in the Cypress Hills area opened up for the first time during the season, and, while the catch was small, considerable local interest was taken by the anglers, and some 139 angling permits were issued for trout fishing, in addition to 316 at other points in the province, largely to non-residents. The total catches of different species of fish taken by anglers from provincial waters during the year were as follows: pickerel, 5,255 hundredweights; pike, 15,496 hundredweights; perch, 710 hundredweights; goldeye, 370 hundredweights; trout, 3 hundredweights; mixed, 280 hundredweights.

## EXAMINATION OF WATERS

Twenty waters were examined in the district during the year by the various fishery officers to determine their suitability for fish. Of this number eight were reported as suitable; seven lakes were stocked by the fishery officers by transfer from other waters in the district, and considerable assistance was given to the hatchery staff in the moving of fry from the hatchery to the various lakes. A number of waters previously stocked are now showing results. Close co-operation between the various fishery officers and the hatchery staff is being maintained.

REPORT OF SUPERVISOR R. T. RODD, PROVINCE OF ALBERTA,  
FOR 1929-30

During the calendar year 1929 the total production from commercial fishing in Alberta amounted to 79,388 hundredweights of all kinds of fish, an increase of 7,613 hundredweights over the production in 1928. The landed value of the catch was \$400,022 and the marketed value \$732,197. There were increased catches in both the summer and winter seasons, the increase for summer being 4,695 hundredweights and for winter 2,918 hundredweights over the production for the same periods of 1928. The following table shows how the production for 1929 was made up, and also shows where increases or decreases occurred in the different kinds of fish:—

## SUMMER SEASON

Kind	Cwt.	Increase	Decrease
Trout.....	22,273	4,260	
Whitefish.....	14,590		301
Perch.....	408		152
Pickerel.....	5,025		160
Pike.....	2,128		82
Tullibee.....	1,065	47	
Goldeyes.....	10		
Mullets.....	365	95	
Mixed fish.....	2,886	988	
Total.....	48,750	5,390	695

## WINTER SEASONS

Kind	Cwt.	Increase	Decrease
Trout.....	1,218	.....	140
Whitefish.....	13,501	1,332	
Perch.....	290	33	
Pickrel.....	2,393	.....	901
Pike.....	5,987	1,555	
Tullibee.....	4,562	1,411	
Goldeyes.....	1	1	
Mullets.....	66	.....	178
Mixed fish.....	2,620	.....	195
Total.....	30,638	4,332	1,414

The increase in summer fishing was due chiefly to the limit being taken on lake Athabasca for the first time, and in winter chiefly to a large part of the limitations for Cold and Primrose lakes for 1928-29 being taken in January, 1929, and practically all the limit for 1929-30 being taken in Primrose lake in December, 1929. There was also a large increase in the production of tullibee at lac la Biche.

There were small increases in production on some other lakes, but owing to the annual limitations for most of the lakes these increases were necessarily small. On one or two lakes the production was not up to the usual amount and in other lakes, where limitations include two or three different species, there were increases in the amount of one species taken and decreases in the case of some of the other species.

*Lake Athabasca* showed an increase of 4,260 hundredweights of trout and 236 hundredweights of whitefish, but there was a decrease in the pike and pickerel landings. The large companies carried on their fishing in the areas well to the east end of the lake not frequented by pike and pickerel, and did not attempt any fishing in the western end of the lake, where these species are found in large quantities. The local residents who, in the previous season, fished on commercial licences for local sale and produced quantities of pike and pickerel, confined their 1929 fishing to Domestic licences.

*Lesser Slave lake* showed an increase in the production of pickerel in summer fishing, a slight increase in the whitefish, but a decrease in pike, perch, mixed fish and mullets.

*Lac Ste. Anne* showed an increase in pickerel, pike and mixed fish, but a decrease in whitefish, although the limitation was taken.

*Lac la Biche* showed an increase in the summer fishing in pike, pickerel and whitefish and mullets, but a decrease in tullibee and mixed fish. There was a large increase in the winter production of tullibee, pike and mixed fish and a decrease in pickerel and whitefish.

*Lesser Slave Lake District* operations resulted in a decrease in winter production, owing to a later freeze-up than usual, which prevented the fishermen from reaching some of the small outlying lakes when the season opened and when fishing in these lakes is at its best. Three of these small lakes were scarcely fished at all as fishing was considered unprofitable after a certain period.

*Moose Lake* produced very little fish and showed a decrease of 750 hundredweights in all kinds of fish. The fishermen and the local inspector attribute this to excessive growth of vegetation in the lake, and to continued high winds throughout the better part of the fishing, which caused the vegetation to break

up and drift into the nets. It was stated that it was almost impossible to keep nets clean and for a great while the fishermen ceased operations altogether. This occurred at a time which was conceded to be the best fishing period in that lake.

#### MARKETS

Marketing conditions were not up to the average during the year, so far as prices were concerned. At some points good prices were obtained during the summer owing to the exceptionally fine quality of fish, such as at lac la Biche, but prices at other points were lower. For winter fishing prices were much lower, especially for the frozen fish. The price for fresh fish was also lower than it had been in past seasons. The amount of fresh fish shipped was approximately 350,000 pounds for the entire province. The higher price received for this small amount did not materially increase the average for the entire winter production.

Greater effort is being made by local producers to find markets directly south of the international boundary.

#### CONDITION OF THE FISHERIES

Except in the few cases cited above where conditions were below normal, the conditions attending fishing throughout the province were very favourable. Weather conditions during the summer months were perhaps more favourable than they have been for several seasons. Fishing was carried on without much delay caused by storms and there was no equipment reported lost. This is most unusual, especially on Lesser Slave lake where there are generally bad storms during September and, usually, a loss of nets.

At the beginning of the winter season the ice was not safe on some of the lakes and the fishermen were delayed in getting their nets set. There was very mild weather in the early part of December, 1928; consequently the ice did not make on the lakes early, and in unsettled districts, where there are no roads and where the fishermen have to cross muskeg country to reach the lakes, they were delayed until the muskegs froze and they could move their equipment.

Considerable improvement was noticed in the fishing at Lesser Slave lake during the summer season. The whitefish averaged much larger than they did during several years previously. The fishing was also much better during August and September. The limitation was taken some time before the end of the season. Lake Wabamun also produced the limit in whitefish during the summer and exceeded the winter limitation in two weeks' fishing. There was also a slight increase in the average weight of the whitefish. There was also a great improvement in the class of fish taken from Pigeon lake. The catch in the 1929 season was over ninety per cent whitefish, while in the preceding season about a third of the catch was pickerel. There were seventy-three less fishermen on the lake, but the limit was taken in about the same time as in 1928.

Conditions at lac Ste. Anne were unusual. It was found that the whitefish were dropping off, while, due to the fact that only five and one-half inch mesh nets were allowed, the pickerel and suckers were increasing. In order to improve conditions, areas were defined in which four and one-half inch mesh nets might be used. The result was that the limitation of whitefish and pickerel was taken, the greater proportion being pickerel.

Fishing conditions in lac la Biche are abnormal. This lake has wonderful jumbo whitefish and developed into one of the greatest lakes in the province. During the summer fishing the catch is largely whitefish, with some pickerel, pike, and tulibee, while during the winter fishing very few whitefish are caught. During the summer season of 1929 ninety-five per cent of the whitefish produced were what are known among the fishermen and dealers as "jumbos," fish of over four pounds weight dressed: All fishermen who could do so purchased

nets of six and six and one-half inch mesh, but those who used the five and one-half inch mesh stated that their catch contained just as many jumbos as were taken by those who used the larger mesh. During the winter fishing scarcely any whitefish could be found, while the production of tulibee was exceptional. This lake appears to be in excellent condition.

Lake Athabasca fishing was at least up to normal but, due to improved facilities and equipment, the limitation was reached for the first time, though fishing was carried on for a slightly shorter period. The companies operating erected more fishing stations or moved those already in existence closer to the fishing grounds. One extra barge was put into commission on the Athabasca river, one of the freight boats or tugs was enlarged sufficiently to handle double the amount of fish, and a large river tug was built and put in operation on the river to handle some of the barges. Better and deeper nets were used than formerly, to enable the fishermen to operate in deeper waters, and new and larger fish boats put in operation. Facilities were also improved at Waterways for handling the fish. The two freezing and cold storage plants were operated to capacity and nearly a million pounds of trout were frozen. Most of this was shipped after fishing operations ceased. This prevented the market from being flooded with fresh fish from lake Athabasca during the summer. The two freezing cold storage and packing plants gave employment to approximately forty-five men during the season.

#### EQUIPMENT

Besides the increase and improvement in equipment on lake Athabasca there was a general tendency towards improvement throughout the province. This was especially so in regard to the nets. A better quality of nets were used on nearly all the lakes, many being of greater depth, which required more leads and floats, and were thus more costly. On lake Athabasca the operators explain that at least fifty per cent of the nets had to be replaced during the season, due to heavy storms and to the fact that the trout are destructive of nets.

#### LICENCES AND PERMITS

There was a large and gratifying increase in the number of angling permits sold during the season, as compared with the 1928 season, as well as an increase in all other licences issued. From the beginning of the fiscal year April 1, 1929, to January 31, 1930, the number issued was as follows:—

Angling permits.....	8, 270
Commercial and fishermen's licences.....	1, 244
Domestic licences.....	410
Indian and half-breed permits.....	1, 080
Total.....	11, 004

The increase over the 1928 total was 2,766.

#### TRANSPORTATION

With the improvement in the boats and barges of the fish companies and the prompt attention given by the river navigation companies and the railways and express companies, all fish were handled in excellent condition. No complaints were received regarding shortage of cars or avoidable delays in shipments.

#### OBSERVATION OF THE REGULATIONS

While the number of prosecutions and confiscations in 1929 were nearly as many as in 1928, it is generally conceded that there was better observance of the regulations, as witness the increase in the sale of licences and permits,

etc. The very large increase in the sale of angling permits, as well as other licences, indicates that a greater number of persons fished. The fact that it was generally known that the various police bodies were giving assistance in the protection of the fisheries, and that the permanent staff of the hatcheries were authorized to act as guardians, doubtless tended to lessen offending. The efficient work and close attention to their work of the fishery officers had the desired effect; the Calgary and Edmonton newspapers gave great assistance by giving nearly a full page to the publication of the regulations. Publicity and co-operation was also forthcoming from the thirty-nine fish and game associations throughout the province. The following is a list of these organizations functioning:—

Red Deer Fish and Game Association.  
Medicine Hat Fish and Game Association.  
Craigmyle Fish and Game Association.  
Olds Fish and Game Association.  
Didsbury Fish and Game Association.  
Calgary Fish and Game Association.  
Edmonton Fish and Game Association.  
Nanton Fish and Game Association.  
Sheep Creek Fish and Game Association.  
Midnapore Fish and Game Association.  
Clareholm Fish and Game Association.  
Delia Fish and Game Association.  
Drumheller Fish and Game Association.  
Hanna Fish and Game Association.  
Banff Fish and Game Association.  
Carstairs Fish and Game Association.  
MacLeod Fish and Game Association.  
Carbon Fish and Game Association.  
Hillcrest Fish and Game Association.  
Pincher Creek Fish and Game Association.  
Strathmore Fish and Game Association.  
High River Fish and Game Association.  
Camrose Fish and Game Association.  
Cadogan Fish and Game Association.  
Jasper Fish and Game Association.  
Vulcan Fish and Game Association.  
Staveley Fish and Game Association.  
Bassano Fish and Game Association.  
Brooks Fish and Game Association.  
Coleman Fish and Game Association.  
Carseland Fish and Game Association.  
Nordegg Fish and Game Association.  
Bentley Fish and Game Association.  
Lacombe Fish and Game Association.  
Castor Fish and Game Association.  
Saunders Fish and Game Association.  
Lethbridge Rod and Gun Club.  
Cardston Rod and Gun Club.  
Killam Rod and Gun Club.

There is also a provincial fish and game association.

There were sixty-four prosecutions and forty-four confiscations during the ten months from April 1, 1929, to January 31, 1930. Details of prosecutions are as follows:—

- 15 — Fishing without an angling permit.
- 12 — Possession of fish and fishing in closed season.
- 11 — Angling in closed waters.
- 9 — Fishing with snares, spears, etc.
- 3 — Angling in closed season.
- 2 — Fishing without a licence.
- 2 — Setting nets before the season started.
- 2 — Having undersized trout.
- 2 — Fishing with illegal gill-nets.
- 1 — Exceeding per diem catch.
- 1 — Fishing without a disgorger.
- 1 — Obstructing creek with traps.
- 1 — Pollution of stream.
- 1 — Selling and trading whitefish in closed season.
- 1 — Fishing without half-breed permit.

Total    64

#### IRRIGATION SYSTEMS

During the early part of the 1929 season there was sufficient moisture, and in some areas heavy floods, which made it unnecessary to irrigate until after July, but later in the season there was a long period of dry weather, which made heavy irrigation necessary until almost freeze-up. Some of the rivers became very low and the irrigation systems were for some time taking all the water they were permitted to take. A close check was kept on these systems to prevent loss of fish, and it was found that, with the exception of the case of one small system, very little, if any, loss of fish occurred. Measures will be taken to prevent this system from doing any damage in the future.

#### DAMS AND FISHWAYS

The new dam constructed by the town of Claresholm last season in Willow creek was again destroyed during the spring floods and has not been replaced. It has not yet been decided whether or not it will be rebuilt. A fishway was constructed in the dam in Beaver creek, owned by Jackson Brothers, of Claresholm and McLeod. During the heavy floods in July, part of the large dam in the Bow river at Carseland, owned by the Canada Land and Irrigation Company, was washed out. This has been replaced by a concrete dam, and a large concrete fishway was constructed at the same time, which should prove beneficial. It is not yet known what will be required in the Calgary Power Company's large dam in the Bow river, west of Calgary. This cannot be determined until the reservoir is filled, and there is an overflow through the spillway. The company, however, has agreed to construct anything necessary and co-operate in every way possible to prevent obstruction or loss of fish. The dam in Pipestone creek at Gwynne, owned by the Canadian Pacific Railway, has been removed and the fishway in the dam at Bigstone creek, near Wetaskiwin, was repaired by the same company. All other dams and fishways throughout the province were inspected regularly and found satisfactory.

#### ANGLING

While the sale of angling permits reached a new high level in 1929, showing an increase of 2,440 over the number sold in 1928, there was a slight decrease in the amount of trout taken. On the other hand, there were increases in the

catches of Arctic grayling and Rocky Mountain whitefish, pike, pickerel and perch. The estimated catch for the season was as follows: —

Trout (all species).....	1,779 cwt.
Arctic Grayling and Rocky Mountain Whitefish.....	1,640 "
Pike.....	10,059 "
Pickerel.....	2,820 "
Goldeyes.....	70 "
Perch.....	1,190 "
Total.....	17,558 "

At Cold lake there was very little increase in the total amount of trout taken by anglers, and a decrease in the amount per angler. In 1928, 630 anglers took 32,025 pounds while in the 1929 season 894 took 32,410 pounds. The local inspector states that the fish taken averaged larger than they have for several years and that when the weather was suitable there was no trouble for the anglers to get their limit, but owing to much windy weather a lot of time was lost. Two exceptionally large trout were taken by anglers during the summer, one weighing 52 pounds and the other 47½ pounds.

Angling in the streams in the southern part of the province was very good at the beginning of the season but, owing to there being, first, heavy floods and afterwards dry hot weather, later conditions changed materially. The streams in the Crow's Nest area fished well until the end of July, but the water got very low and warm in August and the reports were that many streams got so low and warm that the fish went down to the larger rivers or ascended to the colder waters at the head of the streams in the forest reserves where no fishing was allowed. This also applied to the Calgary district and, owing to the extreme dry weather and the danger of fires, the forestry officials were compelled to prohibit anyone from going into the reserves. No fishing was allowed in the Crow's Nest or Bow river reserves from August 3 to the end of the season.

When the weather became cooler towards the end of the season the trout again appeared in the streams and good angling for trout was obtained for the last month. Rocky Mountain whitefish also appeared in greater numbers in September and October and exceptionally good fishing was obtained during the last three weeks of the season. Good fishing was obtained in the Red Deer river and tributaries at the beginning of the season for Dolly Varden trout, with a good percentage of Loch Leven trout. Rocky Mountain whitefish also appeared in great numbers in the later season to spawn. This was towards the end of September, which is after the season closed for fishing in these waters.

Rainbow trout fishing in the streams west of Edmonton was not very good. There was not much high water in the spring and, the streams being small, they became very low and warm during July and August, although some good catches of rainbow were obtained in some places. The Arctic grayling appeared in these streams in great numbers in September and October and exceptionally good catches were obtained. Specimens brought to the supervisor's office by anglers averaged from one to one and three-quarter pounds, the largest yet seen by the Supervisor.

#### LOSS OF FISH (RESCUING STRANDED FISH)

During the winter of 1928-29, some of the trout streams being low they froze to the bottom on some of the shallows. This caused the water in the pools to become stagnant and in other places the water seeped away, leaving the fish stranded. At one time it was thought that the loss would be great but investigation by the inspectors and guardians proved that the situation was no as bad as expected. However, the final report from the officers and guardians showed that one and a half miles of Pekisko creek, and a half mile of Sullivan creek, were frozen solid, and all fish in these areas were killed. Springs lower down in these streams were all that saved the fish below these frozen areas. These

springs kept the water from becoming stagnant. Reports from the Red Deer river and Crow's Nest district showed no loss. Part of the north fork of Sheep creek froze to the bottom, but this was not known until too late to be investigated; nothing definite is known as to the loss of fish there. To prevent such loss from occurring in the subsequent season all officers were instructed to examine streams and where it was found that the water was spread over wide creek beds, and where there was a possibility of these places freezing to the bottom, to make narrow channels through these shallows to confine the water into smaller areas and create greater depths and current. This will generally prevent the creek from freezing to the bottom at such points. At the same time these officers were instructed to examine closely for stranded fish in pools and backwaters, where fish were likely to be cut off from the main stream, and remove these fish to larger streams. Several heavy storms made it unnecessary to do any work in some areas, but one guardian during the fall season rescued 44,000 Rocky Mountain whitefish and 100 Dolly Varden trout, and at the same time destroyed 4,000 suckers. Another guardian made over ninety yards of channel at various points on Pekisko creek, where it froze to the bottom in the previous season, and at the same time rescued a number of trout and destroyed 153 suckers and ling.

About July 1 there was a cloud-burst on the headquarters of the Bow, Elbow and Highwood rivers and Sheep creek, which caused considerable damage, especially in the city of Calgary and the town of High River. It also took out part of the large dam in the Bow river at Carseland, owned by the Canada Land and Irrigation Company. In Calgary considerable damage was done to residential property and when the water receded fish were found in many of the basements. Great trout fishing was obtained in the Bow river below the Carseland dam and in the lower reaches of the Highwood river where trout were scarcely ever found before. Rainbow and Cutthroat trout up to four and one-half pounds were taken in these places. It is evident that these fish were carried down by the floods and while no evidence was obtained it is generally considered that a considerable amount of spawn and young fish were destroyed by being buried in silt or washed on to flooded lands and left stranded. The effects of this flood will be noticed in the next few years.

#### EXAMINATION OF LAKES AND STREAMS—RESTOCKING

Eighteen lakes were examined during the 1929 season to determine their suitability for fish. Only five were found suitable for the coarser varieties of fish and will be stocked as soon as possible.

Nine lakes were stocked during the season by transfer from other lakes. Eight were stocked with perch, and one with both perch and pickerel. This work was in addition to the stocking done by the staff of the various hatcheries.

Reports have been received of excellent results from the stocking done in this way, as well as from the hatcheries. In addition to lakes named in last season's report where good results have been obtained from stocking with perch, Lake Mere, which was stocked with fifty adult perch in September, 1925, gave excellent fishing during the entire 1929 summer. This lake contained no fish prior to 1925.

Battle creek, situated in the western portion of the Cypress hills, was stocked during 1924 and 1925 with rainbow trout. It was reported a year ago that none of these fish had survived. Recently when visiting that district the supervisor was shown photographs of three rainbow trout, taken from a small stream in September, which measured 18, 18½ and 20 inches in length and weighed 11½ pounds combined weight or nearly four pounds each. These trout were taken from a small stream known as Armstrong's creek, which is not connected with Battle creek in any way and was stocked with 5,000 fry in

1925, having contained no fish before. The person showing these pictures stated that he had also caught 11 rainbow trout in Battle creek, the largest measuring 18½ inches and weighing 3½ pounds.

The secretary of the Sheep Creek Fish and Game Association reports that fish were found in the 1929 season in the upper reaches of Sheep creek above the falls, where fish were never found before, but which was stocked five years ago from the Banff hatchery. He also states that he personally saw seven cutthroat trout in one pool, and succeeded in landing one female measuring eleven inches. He is quite confident that these are the results of the stocking five years ago and are now reproducing. The four and a half pound rainbow found in the Bow river below the Carseland dam is also the result of stocking since 1919.

#### SIX DROWNED

Six Alberta fishermen were drowned during the winter fishing period of 1929-30. Four men were drowned in Big Whitefish lake in November, while building camp and preparing for winter fishing. The Royal Canadian Mounted Police reported one fishermen drowned in lake Athabasca. The last drowning accident occurred on Peter Pond lake where a resident of Edmonton, who was using a truck belonging to an Alberta company to move camp supplies, went through the ice with the truck.

### ANNUAL REPORT OF CHIEF SUPERVISOR OF FISHERIES, MAJOR J. A. MOTHERWELL, WESTERN DIVISION (BRITISH COLUMBIA), FOR 1929

Whilst the salmon pack for 1929 shows a reduction of 634,887 cases of all varieties from that of the preceding season, this cannot be accepted as an indication of depletion. As a matter of fact this is not the case. Had the salmon fisheries of the province been administered during 1929 under the same regulations as obtained previous to three or four years ago there is no doubt that the total pack of salmon would have been increased very greatly, if not to the extent that a new record would have been established.

The object of the conservation measures which have been enforced during recent years is to prevent such large percentages of the several runs of salmon being captured and to permit of a materially larger escapement to the spawning grounds. The annual examination of the spawning ground conditions has shown that the object desired is being obtained.

It has been the custom in the past of those not understanding conditions to accept smaller pack figures from year to year as indications of depletion. The only safe method of arriving at a conclusion is to take the figures of the pack together with the quantities of fish found on the spawning grounds.

As an illustration of what is being done, the case of the Naas and Skeena rivers might be cited, where, before the salmon fishing season of 1929 commenced, the upper boundary on the former was brought down six miles and the one on the latter three miles, thereby eliminating some of the most productive gill-net drifts. Obviously, this conservation measure alone had a very considerable effect on the escapement of salmon and was partly the cause of the smaller pack. In addition, the weather conditions, in the north particularly, were the most unfavourable in the past twenty years. The days were dark, cold and wet during sockeye fishing, with the result that a considerably greater proportion of the salmon runs than usual passed under the nets and so escaped to the spawning grounds. The best fishing weather is during fine days with a little breeze.

The total pack of all varieties of salmon for the past fifteen years, arranged in five year groups, and shown in averages together with the number of licences for the several methods of salmon fishing, has been as follows:—

Period	Salmon Cannery	Salmon Gill-net	Salmon Trolling	Salmon Purse-seine	Total pack in five-year groups
					cases
1915-1919.....	80	4,902	1,805	100	1,339,049
1920-1924.....	62	4,336	1,564	164	1,234,134
1925-1929.....	70	5,080	2,589	420	1,716,531

Grouping the sockeye pack figures in a similar manner gives the following results:—

1915-1919.....	334,116 cases
1920-1924.....	303,836 “
1925-1929.....	304,503 “

Conditions on the Naas, as far as the catch was concerned, were not particularly satisfactory and the conditions on the spawning grounds were found to be far from gratifying.

In the Skeena river area a better pack of sockeye was expected, but although expectations were not realized there was found to be an abundant supply of sockeye on the spawning grounds, showing that the conservation measures in this district were quite adequate.

The Rivers inlet and Smiths inlet catches were not up to expectations but, generally speaking, the spawning grounds in the Rivers inlet district were well supplied with spawning sockeye. At Smiths inlet the quantity which passed the nets was quite sufficient for reproductive purposes, although not as great as expected.

In the Rivers inlet fishing district, owing to the number of salmon gill-net licences issued exceeding that for which a forty-eight hour weekly closed season was arranged, a sixty-hour weekly closed season was enforced from July 5th to August 2nd and in Smiths inlet the sixty-hour weekly closed season was enforced during the whole season for the same reason. There is no doubt that this method of taking care of conservation is a most efficacious one.

The effect of the disastrous freshets of 1924 was very evident in both areas and resulted in a smaller percentage of five year fish than otherwise could have been expected.

The pack of sockeye taken at the Nimpkish river was unusually small but, due to conservation measures, a very large escapement reached the spawning grounds, which were most satisfactorily seeded.

In the Barclay sound area, which is becoming more important as a sockeye district each year, the pack was good and would have been considerably greater had the equipment used by the gill-net fishermen been in better condition. The fish cultural operations of the department, coupled with conservation measures during recent years, have undoubtedly materially increased the sockeye run to the Barclay sound area.

The pack on the Fraser river was unexpectedly large compared with recent years and particularly in view of the fact that the brood year of 1925 resulted in a pack of only 31,523 cases or approximately fifty per cent less than 1929. An interesting feature in this connection was the large proportion of early run fish which proceeded to the upper waters of the Fraser River watershed and were of the finest quality. These are undoubtedly either the remnant of the old runs from above Hells Gate or are the result of fish cultural operations during recent years.

It is a fact, however, that in the brood year of 1925 there was a very gratifying supply of sockeye salmon on the spawning grounds in the upper reaches of the Fraser river, particularly in the Stuart Lake and Chilco River districts. The splendid supply of early run fish in 1929 must be the progeny of the runs of these two areas as it was found that the supply of sockeye salmon to both Stuart lake and Chilco river districts was considerably greater than that of four years ago, although there was no particular run to any other portion of the Fraser River watershed above Hells Gate apart from the Shuswap Lake district, where a run arrived later in the season and reached the Adams and Little rivers.

Owing to the fact that the fishermen were not expecting such a good return so early in the season only a comparatively few nets were operated, with the result that an unusual percentage of fish passed to the spawning grounds.

If conservation and fish culture are responsible, even in part, for the runs of the 1925-29 cycle, there should be justification for the hope that, with an international arrangement looking to the rehabilitation of the sockeye runs to the Fraser watershed, great things can be accomplished.

An interesting feature of the sockeye salmon run to the Fraser river during 1929 was the unusually large percentage of three year old males. In past years this was felt by the fishermen to be an indication that the run of the following year would be an unusually good one. In the years immediately preceding what were known in the past as the big fourth year runs these small fish were very much in evidence.

The coho run of 1929 was one of the best in recent years. This variety was plentiful, practically all along the coast of British Columbia. The pack of 174,198 cases, as shown by Statement No. 1, is the largest since 1925 and in fact has only been exceeded three times and only then by small quantities. The following statement covering the period of fifteen years, arranged by averages in five year groups, is of interest:—

1915-1919.....	170,981 cases
1920-1924.....	110,018 "
1925-1929.....	167,397 "

The figures showing the pack of pinks since 1916, arranged in two year averages, show the production for the last two years as the highest on record:—

1916-1917.....	388,701 cases
1918-1919.....	437,191 "
1920-1921.....	356,881 "
1922-1923.....	11,455 "
1924-1925.....	551,480 "
1926-1927.....	510,30 "
1928-1929.....	635,16 "

There is no doubt that the drastic conservation measures enforced during the brood year of 1927 have been shown to have been well justified. Although in 1927, when salmon fishing along practically the whole coast was stopped, it was felt by some that the action taken was too drastic, the results in 1929 leave no doubt as to the desirability of the course adopted.

In the Fraser district, although the large run of pinks which comes in the odd numbered years is fished extremely intensively while passing through the waters of Puget sound and again when reaching the Fraser river, the supply is being well maintained.

The run to the Naas River district was not so good as expected and precautions will be taken in the cycle year of 1931 to see that there is a proper escapement.

The chum pack was disappointing to the industry. Here again, however, the figures for 1929 cannot be taken as an indication of a lack of supply. At the time this variety usually arrive in considerable quantities at the coastal streams

it was found that the runs were very small and in order to take care of conservation requirements boundaries were moved out, areas closed off and an extra close season was enforced with the result that the usual toll of the chum runs was not permitted.

On the east coast of the Queen Charlotte islands, which usually supplies a good pack of chums, boundaries were moved out in practically every bay and inlet where fishing operations were conducted, and this resulted in the salmon reaching the spawning grounds instead of being captured by the fishermen.

In the lower part of the province the season was closed early, and after fishing operations ceased very satisfactory quantities of chums arrived and passed unmolested up to the spawning grounds, resulting in a very excellent seeding generally.

In the principal seining areas on the west coast of Vancouver island, a seventy-two hour weekly close season was also enforced, owing to the allotment of seining licences set by the department being exceeded.

The following statement of the chum pack for the past fifteen years, grouped to show the average in five year periods, will be found of interest:—

1915-19'9.....	31,435 cases
1920-1924.....	28,58 " "
1925-1929.....	632,042 " "

The following statement shows the export distribution of British Columbia canned salmon during the past five years:—

#### SHIPMENTS OF CANNED SALMON FROM VANCOUVER

Countries	1925	1926	1927	1928	1929
Australasia.....	255,470	331,270	251,092	269,029	307,922

#### HALIBUT

The landings of halibut in Canadian ports since 1913 are shown in statement No. 7. It will be observed that the catch in 1929 was 304,364 hundredweights, the largest since 1926. Canadian boats caught 98,372 hundredweights, and United States boats 205,922 hundredweights.

It is apparent that the close season provided during recent years has not had the effect of materially reducing the catch of halibut.

The prices obtained by the fishermen at the opening of the season were somewhat better than those of the commencement of 1928. This was no doubt largely due to the small quantities of frozen halibut remaining in the hands of the cold storage plants at the opening of fishing.

#### HERRING DRY SALTED

Statement No. 8 shows a total of 916,384 hundredweights of dry salted herring. This is the fifth largest pack on record. Had it not been for the short supply on the west coast of Vancouver island it is very probable that the pack would have been near a new record. One factor which has restricted the pack somewhat in recent years is the enforcing of the definite closing date of February 5 each year. In previous seasons herring fishing was permitted until the fish commenced to spawn, and considerable quantities were taken after February 5.

Notwithstanding the intensive operations on the east coast of Vancouver island the catch is being well maintained. A feature of these operations is the seiners' practice, during the last three years, of going farther south and meeting the herring as they come around the south end of the island.

In view of the suggestion that the intensive fishing of recent years for herring might result in the depletion of the supply, the federal and provincial Departments of Fisheries have arranged for a joint investigation of the herring and pilchards by the Biological Board.

#### PILCHARDS

Market conditions having improved for this variety, there were 98,821 cases of pilchards canned in 1929, which is the largest pack ever put up in British Columbia, exceeding that of 1928 by 33,724 cases, as shown by Statement No. 9. The run during the year was a very good one but the fish did not come into the bays and inlets along the coast, which necessitated the fishing operations considerable distances offshore, which added considerably, of course, to the cost of production. The boats required in outside waters must be bigger and more staunchly built than those used in the protected waters, and the seines also must be stronger and more expensively constructed. The haulage for considerable distances to the plants always adds materially to the cost.

#### WHALING

Statement No. 11 shows a catch of 407 whales during the year. As in recent years, the whales were all taken in the vicinity of the Queen Charlotte islands and processed at one plant at Naden Harbour and another at Rose Harbour, both operated by the one company. It will be observed that the catch shows an increase of 102 whales over 1928, and is the largest catch since 1924. Three whaling boats were used out of each of the Queen Charlotte island stations.

#### FUR SEALS

The number of fur seal skins taken as permitted by the Pelagic Sealing Treaty amounted to 3,383 as shown in statement No. 12. This is the largest catch since 1925, when 4,465 skins were taken. In view of the fact that the average prices obtained by the hunters for skins during the year were between \$6 and \$7 there would appear to have been no particular incentive for more intensive hunting than usual. Weather conditions, however, are always reflected in the total of skins taken each year. Owing to the fact that the Pelagic Sealing Treaty permits the taking of fur seal skins by Indians only, and by means of spears while hunting from canoes, obviously an unusual amount of rough weather will result in a small take of skins.

## DESTRUCTION OF SEA LIONS

Statement No. 13 shows that during the year 1,359 sea lions were destroyed in the annual hunt by the crew of the C.G.S. *Givenchy*, equipped with a Lewis gun and rifles. Of these 830 were adults and 529 pups. Owing to adverse weather conditions the operations at Solander rock, on the west coast of Vancouver island, were considerably curtailed. This is a very difficult point to approach and it is very rarely that weather conditions will permit landing. There were fewer sea lions observed in this locality than during the previous year's hunt.

On June 10 the first attack was made on the herds at the Virgin and Pearl rocks. It was found that there were more adults and pups on the Virgins than for two years and considerably more on the Pearls than for several years, the proportion of large bulls and yearlings being greater than in several seasons past.

Weather conditions at these two points were not favourable and it was necessary to make landings in heavy seas, operations which are always very hazardous. Fortunately, no accident occurred although the launch suffered slight damage.

An officer of the Biological Board accompanied the expedition this year for the purpose of examining the stomachs of the sea lions with a view to determining the variety of food therein. It was ascertained that the sea lions during the time they frequented the rookeries were not feeding and their stomachs contained only pin worms and an occasional rock.

## PRODUCTION OF FISH MEAL AND OIL

By statement No. 10 it will be observed that the quantity of pilchard meal produced was the largest on record, although the 1928 total for pilchard oil was greater than 1929. This was due entirely to the fact that although the pilchards arrived in large quantities they were unusually lean which resulted in a greater supply of meal in proportion to that of oil. There were 115,523 tons of raw pilchards used for reduction purposes.

Operators were not permitted, in District No. 3, to use herring for reduction purposes and, therefore, the quantity of meal and oil shown in the statement is the result of the operations of one plant at Prince Rupert. There were 3,744 tons of raw herring used for this purpose.

In the whaling operations it will be observed that the oil rendered amounted to the large total of 712,597 gallons, which is a record for recent years. This, of course, is due to the increased catch of whales.

The balance of the meal and oil shown in the statement was obtained from halibut and salmon offal, and grayfish and scrap fish.

## PATROL

There were 130 boats used in the protection of the fisheries of the province during the year. Twenty-three of these boats were departmentally owned, two of them being powered by steam and the others by gasoline or crude oil. The chartered boats numbered 107, but thirteen of these were row boats, the others being fueled either by gasoline or crude oil.

The *Malaspina* and *Givenchy*, the two largest boats, were used principally for the patrol of the three mile limit, the protection of the fur seals while passing through British Columbia waters to the rookeries on the Pribiloff islands, the protection of Canadian harbours from illegal use by foreign boats, the patrol of the halibut fishing grounds, and general assistance in the protection of all varieties of fishing, were extremely busy during the year. The *Malaspina* logged

21,579 miles and the *Givenchy* 17,911. The *Givenchy* as usual was employed for a period during the winter on the work of lifesaving with headquarters at Bamfield, close to cape Beale in the Barclay Sound area.

Two new boats were built during the year, one 45 feet long, 11 feet beam, 3 feet 6 inches draft, registered tonnage 12, equipped with a 4-cycle, 4-cylinder Thornycroft 40-horsepower reduction geared gas engine. This was to replace the *Swantail*, used on the Fraser river, which was unfit for further service. The second new boat, 45 feet long, 11 feet beam, 4 feet 6 inches draft, registered tonnage 12, equipped with 4 cycle, 4-cylinder Thornycroft 40-horsepower reduction geared gas engine, replaced the *Cloyah* which was destroyed by fire in the north.

A type of boat known as the Gypsy cruiser was built for the Babine lake patrol, with the following dimensions: Length 20 feet, beam 8 feet, draft 6 inches. The power is derived from an outboard 12-horsepower motor. The very shallow draft will permit of a maximum of efficiency in this lake section and the power arrangement should result in economical operation.

Owing to the fact that on the coast of the province there are innumerable long inlets and many streams which it is necessary to patrol by boat, it was felt that much greater efficiency could be obtained at a saving of time and expense by the employment of sea sleds. Three different varieties of sled and outboard engines were used during the year in order to ascertain which was the most satisfactory for the work required.

On the Naas river a specially constructed craft was supplied, equipped with a Lockwood outboard engine, and was found to be extremely useful in dealing with illegal fishing operations above the commercial fishing boundary. By means of this equipment these operations were very largely curtailed, and the hostility of those whose illegalities were checked was very eloquent of the efficiency of the service.

On the Skeena river a somewhat larger variety of boat was used, equipped with a Johnson outboard engine. By means of this craft the officer in charge of the Skeena river and Chatham sound operations was able to give his area more efficient attention and at very considerably less cost, since he could use the sea sled in the inside waters when the bigger boat was utilized for Chatham sound. In this way the work of two boats was done by one, and an inexpensive sea sled, and with much greater efficiency and speed.

At Rivers inlet a boat smaller in size than that employed on the Skeena was used, equipped with a Watermoto outboard engine. It was found, however, that the boat was not sufficiently staunch to stand the weather to be encountered. Arrangements will be made to transfer this boat to a more protected area.

In the Alert Bay area a sled and engine similar to that employed on the Naas were supplied to the local inspector. The sled's size permitted it to be carried conveniently on the deck of the inspector's patrol boat and he was able to obtain greater efficiency, cover more ground, and at much reduced cost, by means of this equipment. It was possible to leave his big boat at the mouth of an inlet, for instance, or have his engineer attending to some fisheries affairs, while he himself, in his sea sled, covered long distances up the several inlets in protected waters.

#### SEAPLANES

The seaplane service again proved to be extremely efficient in the prevention of violations of the fishery regulations. During the season 408 hours 8 minutes flying time was consumed. The latest type of Boeing flying boat was employed and gave excellent satisfaction. The inspection of spawning grounds and interior waters generally was extended during the year by means of planes, and much valuable information was obtained at a great saving of time and cost.

The air patrol is particularly valuable for localities which are inadequately served in the way of telegraph or telephone communications or by mail arrangements. On the east and west coasts of the Queen Charlotte islands, for instance, the fisheries patrol was handicapped until the flying boats were obtained. One of these boats in one week in the Queen Charlotte islands apprehended no less than seven salmon purse-seining boats for fishing inside the limits. In all these cases convictions were obtained.

Probably the greatest value of the flying service is in its moral effect in the preventing of violations. The fishermen's associations, which are showing each year a greater inclination towards working with the department's officers with a view to conservation, are very enthusiastic over the flying service as a means of preventing illegal fishing.

Statement No. 17 shows the localities from which the planes operated during the season under review, and the flying time used from each.

#### REGULATIONS

With a view to greater conservation and the improvement in the quality of the salmon pack, numerous inlets and bays have been, by means of regulations, removed from the fishing areas.

Certain areas have also, by regulations, been prohibited to salmon purse-seines, in accordance with the department's policy that where it is feasible for gill-netters or trollers to operate successfully such areas will be reserved for these methods of fishing.

During recent years fishing gear has increased to such an extent, and, as a consequence, fishing operations have become so intensive, that it has been found desirable, with a view to conservation and convenience in administration, to divide the commercial waters of the province into twenty-seven salmon purse-seining areas. Each one has been defined in such a manner as to embrace as nearly as possible a complete system of waterways or salmon runs, and instead of closing large areas it has been found more desirable, and just as efficacious, to deal with the one system as a unit. These areas have also been arranged so as to conform to the districts covered by each individual fishery inspector and also to conform, as far as possible, to the areas used for the collection of statistical information.

As a further means of control of the salmon seining, primarily, to each area has been allotted a number of purse-seines which, in the opinion of the fisheries administration, is ample in view of the apparent supply of fish running to the area, and always having conservation in view.

It is a fact that under the department's policy no properly qualified person is refused a salmon purse-seine licence, and further, there is no restriction as to the number of seining licences which may be taken out or operated in any area, but the control is in the arrangement whereby, if the allotment in any one area is increased by even one licence, the weekly closed period for that area will be increased from the normal time of forty-eight hours to seventy-two hours. During 1929 this plan was found to be a very potent factor in reducing excessive fishing in most of the areas and with the experience of the past year it is felt that the system will work to even a more useful degree in the future in the interests of conservation and control generally.

It must also be remembered that, in addition, there always exists the authority vested in the fishery officers, by regulation, to cut off any areas necessary by means of moving fishing boundaries or to close all fishing should conditions warrant. Such authority is exercised without hesitation when necessary.

As an evidence of the effectiveness of the method of moving commercial fishing boundaries farther down towards the mouths of streams, it is interesting to note that the Indians along the Skeena river, above the commercial fishing boundaries, reported during the year the greatest run of spring salmon observed in the last twenty years. Obviously, this was the direct result of lowering the boundary on the Skeena three miles and eliminating some of the drifts in the narrow parts of the river which effectively prevented the proper escapement of salmon.

Very similar conditions were found on the Naas river where the boundary was lowered six and a half miles at the commencement of 1929.

In Seining Area No. 2, which comprises all the southern portion of the Queen Charlotte islands from Skidegate south, with a view to proper protection of the runs of chums particularly, which had shown some signs of depletion in the past, the fishing boundaries were moved out at practically all points where salmon seining had been found profitable in previous years, with the result that, notwithstanding a considerable number of seines operating during the year, the catches were small. The action taken was undoubtedly responsible for the better seeding of the spawning grounds.

#### VIOLATIONS OF THE FISHERY REGULATIONS

During the season there were 160 convictions obtained for violations of the fishery regulations, as compared with 176 in the previous year. Particulars are given in appendix No. . The total revenue collected as a result of these violations amounted to \$6,314.31.

Included in the list of convictions were those of three foreign boats prosecuted for illegal fishing inside the territorial waters of Canada. There were five cases of prosecutions of foreign boats illegally using Canadian harbours. No convictions were obtained in any of these cases, the court holding that the evidence was insufficient.

In view of the considerable increase during recent years in the size of the foreign salmon trolling fleet operating off the shores of British Columbia considerably more attention has been necessary to the protection of Canadian harbours. There are a great many of these shelters in the numerous inlets, and on the islands along the coast, and since the coast is so sparsely populated, foreign boats have undoubtedly been making greater use of Canadian harbours than they are entitled to do. It is only by constant patrol with suitable boats that these violations can be detected, and even when boats are apprehended convictions are difficult to obtain owing to the numerous excuses in the way of alleged damaged engines, illness and unsuitable weather for the particular class of boat, etc. It is felt, however, that the seizures made during 1929 will have a decidedly good effect, and it is hoped that in future seasons this difficulty will be largely overcome.

#### SPORT FISHING

The year under review was a satisfactory one from the standpoint of sport fishing. Some excellent angling has resulted from the stocking of lakes and streams by the department with the several varieties available in the province, which include the Kamloops trout, Cutthroat trout, Eastern Brook trout and Steelhead trout. There is no doubt that the efforts being made by the department in the way of restocking streams and lakes are well justified, and they are certainly much appreciated by the anglers.

During the year 237 plantings of eggs and fry of the sport varieties of fish were made in streams and lakes of the province which were in need of stocking.

## STRIKES OF FISHERMEN

During the season the following strikes occurred amongst the fishermen:—

At Bella Coola spring salmon gill-netting commenced on May 30 and continued until June 4. Owing to a disagreement over prices received, fishing ceased on the night of June 4, but after one day's idleness the fishermen resumed operations, although no definite decision had been reached with regard to prices.

In the Shushartie district the salmon trollers, on July 1, ceased fishing operations as they were not satisfied with the prices paid for the spring and coho salmon being taken at that time. Fishing operations were resumed on July 6.

In the pilchard fishery on the west coast of Vancouver island the purse-seiners remained ashore on August 7 owing to the fact that they felt they should receive \$4 instead of \$3 per ton. Their demand was met by the reduction plants and canners, and fishing resumed the next day.

## DEFORESTATION-SALMON

During the year conditions have been found unusually difficult for the ascent of salmon in certain logged-off areas as the season was the driest experienced in certain parts of British Columbia in the last twenty years. The lack of rain increased greatly the difficulties in protecting the salmon runs to some districts.

Unless and until some program has been arranged in the way of reforestation it would appear that the only way to maintain the runs of salmon to a number of the streams in question is by means of fish culture, and the difficulties even in this method would be great in view of the number of streams affected and their small size.

## FISHERMEN'S ORGANIZATIONS

One interesting development in the last three years, and during 1929 particularly, has been the effort put forth by the fishermen with a view to organizing in such a manner as to include all the fishermen on the coast. During the past season greater results in this way have been obtained than ever before and it is expected that in the very near future practically every fisherman will have an opportunity, through his own association, of doing his part towards bettering fishing conditions.

By means of the fishermen's associations much closer contact can be maintained between departmental officials and those actually conducting fishing operations. The result is very helpful to all concerned and in view of the repeated statements of the fishermen's officials that they are eager to co-operate with the department in the conservation of the fisheries of the province much is expected of the move.

## SALMON FISHING EXTRA-TERRITORIAL WATERS

In the past two years several of the British Columbia canning companies have conducted salmon seining operations in extra-territorial waters, in the vicinity of Swiftsure banks at the entrance to Juan de Fuca straits. These operators come into competition with numerous foreign seiners and very large quantities of salmon are captured in this way, the greatest percentage, of course, being landed at ports in the state of Washington. The Canadian deliveries are made at Barclay Sound points.

In view of the immaturity and otherwise undesirable condition of these fish captured on their feeding grounds and the small value to the fishing industry, compared to those which would result were the fish permitted to complete their feeding and come into the territorial waters where they are in infinitely better condition for canning and food purposes generally, it would seem eminently desirable that some measures be taken without delay with a view to the prohibition of fishing in the vicinity of Swiftsure banks. It is felt that such prohibition

would be well justified as the salmon later would have reached a larger size, would be in very much better condition, and would be of much greater value to the industry and the public generally.

#### DESTRUCTION OF HAIR SEALS

Each season the fishermen press for some action to be taken to the end that the hair seals may be exterminated, or at least very materially reduced. It has been proved beyond a doubt that these mammals destroy very large quantities of salmon and will at times become entangled in the gill-nets, causing the fishermen very considerable loss. The fishermen complain that often upon hauling their nets they will find nothing left but numerous salmon heads, the rest of the fish having been taken by the hair seals.

This menace is particularly annoying in the Fraser river, Skeena river, Naas river, and Rivers and Smiths inlets.

Many methods have been tried with a view to the destruction of the hair seals, but none has been devised which promised any real success.

Owing to the fact that these mammals do not gather in large numbers at any known rookery at breeding time, as in the case of the sea lions, it is not possible to adopt the same methods as used in dealing with the latter menace.

Statement No. 18 gives particulars of the amounts paid each year by the department in the way of bounty for the destruction of hair seals, together with the number on which the bounty was claimed each year. There is no doubt that the bounty system is the most efficacious one for the purpose of reducing the seal menace.

#### MEETINGS WITH FISHING INDUSTRY

During the year numerous meetings have been held with the fishermen's organizations, as well as with the canners. Much good results from this constant close contact and it is the intention to continue and encourage such contacts with the industry.

It is the department's policy that just as far as is possible the industry will be advised each fall as to what it may expect in the way of amendments to the regulations or changes in departmental policy covering the following operating year. The intention is to hold one meeting each fall at which every branch of the industry will be represented by one or two officers, instead of holding a mass meeting at which it is difficult to reach any real conclusion. While all fishery officers are at all times very willing and eager to meet fishermen and canners, at the same time it will be appreciated that in any large gathering it is not possible to obtain the results which are to be desired from a meeting such as proposed above.

#### STAFF

The promotion of Mr. A. J. Whitmore, who had for several years been occupying the position of head clerk in the Vancouver office, to an important position at headquarters has enabled the organization generally to be greatly improved. His experience in British Columbia will surely be found helpful at headquarters when dealing with Pacific coast affairs.

As the fisheries of the province have been extended, more guardians have been employed from time to time, and in certain localities it has been necessary to keep these officers on duty in recent years twelve months in the year. Owing to the irregularity of such procedure, from the standpoint of the Civil Service Commission requirements, and with a view to obtaining the services permanently of capable and experienced men, it was found necessary to make these positions permanent ones. In addition, due partly to the extension of fishing operations in District No. 2 and also to the resignation of one officer and the transferring of several others, it has been found necessary to make five entirely new appointments of inspectors. Applications were called by the Civil Service Commission for a total of thirteen positions.

The peak number employed in the administration of the fisheries of British Columbia during the year was as follows:—

Inspection and clerical staff.....	46
Guardians.....	37
Patrolmen and boat crews.....	188
Fish culture.....	73
	<hr/> 344

#### OBITUARY

In the passing during the year of Supervisor A. P. Halliday at New Westminster, the department lost one of its most experienced and keenest fishery officers. Mr. Halliday joined the service in New Westminster on December 1, 1904, and in the way of energy, keenness and hard work, generally, gave all he had to the service.

Mr. W. R. Johnson, a member of the Babine Lake Hatchery staff, was also lost to the service through an accident which occurred while he was riding back to the hatchery from a short period spent at Burns lake.

#### MEETING OF FISHERY OFFICERS

Again this year all the permanent fishery officers were gathered together at Vancouver before the fishing season started in order that all matters pertaining to the season's program might be discussed. There is no doubt that this annual meeting is of very great assistance to the officers in the understanding of their duties, and to the department in the way of obtaining closer contact with those administering the fisheries throughout the province.

#### INDIANS—SPAWNING GROUNDS

The Indians of the province have always been more or less dependent for their food on the salmon and it has been their custom, particularly in the upper reaches of such systems as the Skeena and Fraser rivers, to capture very considerable quantities of salmon on the spawning grounds each fall and cure them by their own methods for the purpose of food for themselves and their dogs.

In recent years the necessity for taking such a large toll from the salmon runs has become less apparent, due to the fact that, on the coast, particularly, the Indians are able to compete with whites on a fairly equal basis in such occupations as commercial fishing operations, employment in shore fishing establishments, stevedoring, logging and similar occupations. The result has been that those on the coast, apart from the older ones, do not require the same amount of salmon. The situation in the coast areas is becoming more satisfactory each year in this connection and can be satisfactorily handled. It is the large quantities, particularly of the valuable sockeye variety, taken above the commercial fishing boundaries which are the cause of considerable concern, particularly in view of the fact that most of these fish are captured practically on the spawning grounds after they have passed the many natural dangers and obstructions as well as the nets of the fishermen on their way up the many miles of river to the spawning streams.

In the Naas River area the salmon landed by the Indians are, as a rule, not taken actually on the spawning grounds, but are captured after having passed the commercial fishing boundary. A very large percentage of those taken in the Skeena and Fraser watersheds, however, are actually from the spawning creeks. At Babine lake and river, headwaters of the Skeena river system, new nets are supplied to the Indians by the Department of Indian Affairs every second year. The run has always been sufficiently large in that district to permit of an ample supply being obtained each year.

In the headwaters of the Fraser river, however, at Stuart lake particularly, there have been several seasons when the run was so poor that the Indians have

not fished. In these areas the Indians found other means of obtaining a food supply, and, as a matter of fact, during recent seasons they have devoted more time apparently to haying operations. During the season of 1929 there was an exceptionally large run of sockeye salmon to the Stuart Lake area. Of this run the Indians are estimated by the local officer to have taken 10,052. In view of the efforts being made by the department to restore this valuable run to the Fraser watershed it is regrettable that such a heavy toll should have been taken.

In the years of the good runs the percentage taken by the Indians obviously is not so serious as that during the smaller runs.

There is, of course, another side to the question and the position of the Indians must be appreciated. Before the commercial fisheries assumed such large proportions there was no question as to the propriety of the Indians obtaining all the salmon they required in any manner they wished for the purpose of food for themselves and their dogs. In view of the intensive commercial fishing which has developed of recent years, and the greatly increased value of salmon, the operators feel that the catch of the Indians, on the spawning grounds particularly, should be curtailed if not discontinued entirely, but they realize that some adequate measures should be taken to the end that the Indians may not suffer. Several suggestions have been made to meet the situation, such as the substituting of canned pilchards or salmon put up by other methods at the coast and shipped to the Indians. No concrete proposal, however, agreeable to the Indians has yet been forthcoming, but it is understood to be the intention of the salmon canners to suggest some form of co-operation with the fishery administration with a view to the substitution of some other suitable variety of food and the non-interference with the salmon.

The numerous anglers who fish in the Stuart Lake area are also objecting to such large quantities of trout being taken by the Indians.

It is interesting to note that by the last census there were found to be 27,720 Indians in British Columbia, and the officers of the Department of Indian Affairs estimate that 11,488 of these engage in the several branches of the commercial fishing operations, but that there are 13,232 who claim the privilege of taking fish for the purposes of their own food.

Statements Nos. 19 and 20 show the number of the several varieties of fish estimated to have been taken during the year 1929 by the Indians from the areas above the commercial fishing boundaries.

#### CLEARING OBSTRUCTIONS IN STREAMS

During the year work was performed on twenty-five different streams in the province with a view to making it possible for the salmon to ascend to their spawning grounds without difficulty. The amount spent in this connection was \$5,363.44.

In several parts of the province the rainfall was so light as to result in the worst conditions experienced in the past twenty years. Obviously, log jams or other obstacles in the way of rocks or steep inclines which, under normal conditions would not hinder the passage of salmon, were, due to the above-mentioned conditions, found to be real obstacles. As is usual, every case coming to the attention of the fishery officers, either as a result of their own investigations or through the co-operation of the fishermen or canners, received proper attention and any necessary work was performed at the most suitable time.

More and more attention is given each year to the question of obstructions in streams and the inspection of streams generally, and as a result of the contemplated appointing of a number of new inspectors it is expected that even better results will be obtained.

## MEMORANDUM AS TO SPAWNING CONDITIONS, 1929

*District No. 2**Queen Charlotte Islands*

Nineteen hundred and twenty-nine was the "off" year from the standpoint of pink salmon. It is only in the even numbered years that a large and very excellent run of this species reaches the streams on the north and east coast. In the odd numbered years, while there is a small run, it is nothing compared with the big year. During the season just closed conditions on the spawning grounds were found to be normal.

In the case of the chums, there is a run particularly along the east coast of the islands every year. It has been felt that, due to intensive fishing and dry weather during recent years, possibly the supply was becoming more or less depleted. This being the case unusual precautions were taken in the season just closed in the way of moving fishing boundaries in such a manner as to make inaccessible to the fishermen a majority of those areas which have been found to be most productive in past years. As a consequence the pack has been small but an examination of the spawning beds proves beyond a doubt the effectiveness of these conservation measures. The streams, speaking generally, were well supplied with spawning salmon and this would not have been the case had the unusual measures in the way of conservation not been taken.

It is the intention to watch the Queen Charlotte island streams closely and give them what protection is found necessary in order that there may be no depletion of any variety of salmon.

*Naas River Area*

The usual inspection was made by our own officer, accompanied by the Provincial Inspector of Fisheries, of the Meziaden district particularly. In addition, an inspection was made by the fishery officer from Smithers of the Black-water river, which, owing to the difficulties of the trip and there being no competent officer available, has not been properly inspected heretofore.

We have also had a more comprehensive inspection made during the past season of the lower reaches of the Naas river itself. This has been impossible in the past, owing largely to the fact that there was not available an experienced officer for this difficult trip.

Generally speaking, the results show a considerable increase in the run of sockeye over the previous year but both officers who inspected the Meziaden district, which is the most productive from the standpoint of sockeye, agree that the run was but two-thirds of that of the brood year of 1924. The fishway was found to be in excellent working condition.

In the past it has been felt that the very large percentage of sockeye were the result of the spawning in the Meziaden district, but following this last season's inspection there would appear to be good reason to believe that there are other portions of the watershed which have been considerable factors in the run and the Meziaden district can be no longer considered the only spawning area of real importance.

The supply of springs and cohoes was no better than the average. This was an off year for pinks. The chum run was rather light.

At the beginning of 1929 the fishing boundary was lowered six miles towards the mouth of the river and it is felt that in future years this conservation measure will show the wisdom of this measure.

*Skeena River Area*

The sockeye spawning area nearest to salt water is Lakelse lake and its tributaries. The run of sockeye to this district was good, comparing favourably with that of the brood year of 1925, the Lakelse lake sockeye being four year olds. In 1925 there were two very severe freshets during November and December which caused considerable damage to the principal spawning streams,

Williams and Schullabuchan creeks. Had it not been for these freshets it is felt that the supply of sockeye would have been exceptional. Unfortunately, similar freshet conditions prevailed during the present fall, three being experienced, and it is feared that there has been considerable damage to the naturally spawned eggs in the two main tributaries to Lakelse lake.

The hatchery superintendent reports that the run of pinks to the Lakelse area was the largest on record in the memory of the old time residents of the district.

The supply of cohoes was well up to the average.

The spawning areas of the Bulkley river are undoubtedly a considerable factor in the runs of salmon to the Skeena district. Unfortunately, due to lack of qualified men in the past, it has been impossible to obtain a thorough inspection of this area. It is hoped that next season the facilities will be available which will enable this very necessary inspection to be performed efficiently. The local guardian at Hazelton stated, however, on July 28 last, that the largest run of sockeye for years was at that time ascending the Bulkley river. There is no doubt that a very satisfactory quantity passed up this stream to the spawning grounds.

The main spawning areas of the Skeena River watershed are Babine lake and its tributaries, together with Babine river. The usual inspection was made this year by experienced, competent officers, who all agree that all the creeks, without exception, were well seeded with sockeye and that the prospects for a good return in the seasons of 1933 and 1934 are excellent, particularly in the latter year, as it is estimated that the great percentage of the run this year is composed of five year fish. The local provincial officer, who has made many inspections of the Babine watershed, states in part as follows: "From my own observations of the Babine river I would say that the sockeye run this year was a big one and equal to the best year I have seen."

The same officer suggests that so large an escapement this year can only be attributed to two or possibly three factors, as follows:—

(1) The extended weekly close season which the department enforced on the Skeena river gill-net fishing; (2) The unusual weather conditions and clear water causing the fish to swim deep. (The weather during the sockeye season was most favourable experienced in the last twenty years and undoubtedly a big factor in the success of the catch); (3) The three mile shortening of the fishing boundary.

The supply of spring salmon was fairly good and better than for several years.

The pink run was reported as being the largest seen in the Babine and is another evidence of the beneficial effect of the conservation measures taken in the middle of the pink fishing season of 1927 when it was found necessary to close fishing entirely for a period.

The supply of cohoes has not been particularly good. It is evident that the conditions found on the Skeena and Naas in connection with the coho run are influenced to a very considerable extent by the intensive salmon trolling operations by both the Canadian and foreign fleet between the International boundary on the north, and Goose islands, as well as about the Queen Charlotte islands. This no doubt also very materially affects the run of springs. It is felt, however, that the lowering of the boundary on the Skeena will probably be even more beneficial to the springs than to the other varieties.

The Indians, as usual, have taken a large quantity of sockeye salmon from the Babine district and have also destroyed a large number of pink salmon which have got in the nets used for taking sockeye but which they do not want.

#### *Central Area*

Weather conditions during the season in the Central area were very favourable to the ascent of salmon to the spawning grounds. Heavy rainfall during June, July and August kept all streams well supplied with water.

The sockeye streams are generally well seeded.

Cohoe streams are also well supplied with spawn of that variety.

In the case of the pinks there is no doubt that the drastic measures taken in 1927, the brood year, resulted in the saving of the pink run to the Central district. In 1929 spawning streams of this area were found to be satisfactorily supplied with this variety.

Springs and steelheads do not frequent the streams in this division to any extent.

In the case of chums, the spawning has been satisfactory, and much better than would have been the case had there not been unusual restrictions placed on the fishing in the way of closing certain areas by means of moving the fishing boundaries.

#### *Bella Coola and Kimsquit Areas*

An inspection of the Bella Coola river spawning conditions showed that there was a considerable increase in the quantity of sockeye over the previous year and the supply is reported to be greater than usual.

There was a fair run of spring salmon.

The coho supply also appeared to be satisfactory, although the date of inspection was rather early to obtain complete results. It is felt, however, that in this area, as well as in practically all others in British Columbia, the supply of cohoes was entirely satisfactory.

The pink run is reported to have been a heavy one and almost as great as the preceding season, which was unusually big.

Speaking generally of the Bella Coola river there is no doubt that conditions found this year were entirely satisfactory.

In the case of Kimsquit river, there is evidence that the run was an encouraging one. The Kimsquit is never a particularly good spring salmon stream but the average quantity was found on the spawning grounds. The coho conditions were found to be very similar to those on the Bella Coola river. The pink supply was small, but it must be remembered that the pink run to the Kimsquit river has never been large. Evidently there was a fair escapement.

#### *Rivers Inlet District*

Speaking generally, there was a good escapement of sockeye salmon to the Rivers Inlet area, although the streams at the head of Owekano lake were found to contain fewer fish than was hoped for.

The feature of this year is that it was noticed that the streams with the best spawning facilities had the largest supply of sockeye salmon. This applied particularly to the Waquash, Genessi, Quap and Dallack rivers. The Indians reported a second large run of sockeye to the Waquash and Indian rivers following the first inspection of the fishery officers. The superintendent of the hatchery at Rivers inlet states that he would assume that the run has been above average and considerably greater than the run of the preceding year. It will be remembered that in 1924 there were unusually severe freshets in the Owekano Lake district which did a considerable amount of damage to the spawning grounds. This was reflected in the run of four-year fish in 1928 and again in the five-year fish in 1929.

The run of coho salmon in the Rivers Inlet area this year was a good one.

The supply of chums was also found to be very satisfactory.

The condition of the streams in the Rivers Inlet area from a standpoint of obstructions was found to be satisfactory. There are no obstructions preventing the ascent of salmon. There is, however, an old log jam at the mouth of the Waquash river but it has not prevented the salmon from proceeding to the spawning grounds. This is evidenced by the large quantities found above the alleged obstruction. This season two inspection trips were made by the fishery officer in order that the fullest possible information might be available.

*Smiths Inlet area*

Two inspections were made of the Smiths Inlet area by the federal officers, the former on September 20 and 21 and the latter on October 6. The first inspection showed few sockeye in the two main spawning streams, which are the Geluck and Canoe rivers, the Geluck being considerably the larger stream and the favourite spawning ground. The water was very low but an examination of the beach along the lake showed considerable bodies of sockeye breaking water near the mouths of the streams and apparently waiting for suitable conditions before ascending.

The second trip showed greatly improved conditions. The number of sockeye seen was found to be slightly, if anything, below the average in numbers. In this area, as in Rivers inlet, extra weekly closed time was enforced during the season, and that action, together with the unusually difficult weather conditions, resulted in a larger proportion of the run ascending to the spawning grounds than would have otherwise been the case.

In this area, as in Rivers inlet, the effect of the severe freshets in 1924 was evident but with the quantity of sockeye found on the spawning grounds there is every reason to expect a satisfactory return in the cycle years.

There were no obstructions found in either the Geluck or Canoe rivers which would prevent the salmon reaching good spawning grounds.

This is not a prolific pink and chum area, but the 1929 runs were normal, as was the case with the springs and cohoes.

*Alert Bay Area*

At the Nimpkish river, which is the chief salmon stream in the Alert Bay area, the escapement of sockeye to the spawning grounds, notwithstanding intensive fishing and a small pack, was excellent. Sockeye commenced to run on May 10 and continued to the middle of August. Weather conditions during July interfered undoubtedly with the catch by purse-seines, and the extra weekly closed season enforced permitted extremely satisfactory quantities to pass up the river.

The local officer reports a very good run of the fall varieties.

At Glendale cove there is usually a very good run of sockeye and pinks. Sockeye run in 1929 was fair compared to other years, but the run of pinks was unusually large.

Large catches of pinks were made at Bond sound, but although the run to Thompson sound was excellent the closing of this area permitted all the fish to ascend to the spawning streams.

The local inspector states that he observed during the season more salmon in the streams than in any previous year since 1924, and he states that this condition is the result of closing areas to fishing and the moving out of fishing boundaries.

The run of cohoes particularly has been remarkably good in this area.

*Quathiaski Area*

There are only two points to which sockeye run in this area. These are Hayden creek and Phillips river. At both these points the supply on the spawning grounds was good and in fact the local officer states that the grounds were never better seeded.

This was an "off" year for pinks in the Quathiaski district and no big run was expected. Conditions, however, were quite normal.

All the coho streams were well seeded.

While at some points the run of chums was very heavy, generally speaking the run was not quite up to normal, but the seeding was apparently satisfactory.

The seeding of springs was remarkably good.

*Pender Harbour District*

The only sockeye stream of any importance in the Pender Harbour district is the Saginaw river. More sockeye were observed in 1929 than during the previous brood year.

The supply of pinks was found to be most gratifying and compared favourably with the cycle years of 1925 and 1927, except in Theodosia arm.

The coho spawning grounds were well supplied and the fish ascended all streams usually used by them in as large numbers as in the four years previous, and in some instances greater numbers.

The quantities of chums found on the spawning grounds were quite satisfactory.

#### *Comox District*

The Comox area is primarily a fall salmon district. The supplies of the various varieties were normal, but the fish had difficulty in ascending to the spawning grounds, owing to lack of water in the several streams. Many were observed to be spawning practically at the mouths of the creeks.

This has been the "off" year for pinks, but for an "off" year the run was a very good one to the Puntledge and Tsolem rivers.

A heavy run of chums ascended the Big Qualicum river and the spawning grounds there should be well supplied.

Cohoes were abundant in most of the streams in the district, although they arrived later than usual, no doubt owing to the low water conditions.

#### *Nanaimo-Ladysmith District*

In the Nanaimo and Chemainus rivers the run of chums and cohoes was quite satisfactory. Some of the smaller streams, however, were very low and the spawning conditions were not satisfactory. This condition will be watched in the cycle year.

#### *Cowichan District*

The principal streams in this area are the Cowichan and Koksilah rivers. In the Cowichan one small run of springs arrived about the middle of August, another about the middle of September. Owing to the most unsatisfactory water conditions in the last twenty years, the fish found great difficulty in passing up beyond Skutz falls and in fact very few of them got beyond the obstruction, which in the past has not prevented salmon from ascending. It appears that the supply of springs to the Cowichan river during 1929 has been the poorest for some years.

The supply of cohoes was well up to the average, but these fish also were obstructed at Skutz falls. As in the case of the springs, a number would naturally spawn between the falls and the mouth of the river as there is quite an extent of suitable spawning ground. Quite a number, however, undoubtedly died without spawning.

The run of chums was exceptionally heavy, and remarkable for the fine condition and size of the fish. The seeding by this variety was most satisfactory.

In the case of the steelhead trout an excellent run was observed to the spawning grounds.

Rainbow and Cutthroat trout have been plentiful during the year, many fishermen mentioning to the local officers that it was one of the best seasons they had experienced.

No evidence was seen to indicate that the attempt to stock this area with Atlantic salmon has been successful.

Steps are under consideration to overcome the difficulty at Skutz falls by the construction of a suitable fishway.

Water conditions on the Koksilah river were difficult and the seeding of that river was poor.

It is worthy of comment that there are no commercial fishing operations permitted anywhere near the mouths of the Cowichan river or Koksilah river, and the fish have as a rule very little interference.

#### *Victoria District*

There are few salmon streams of any importance in the Victoria district, apart from the Goldstream river. The local officer reports that an unusual

run of coho ascended to the spawning grounds of this stream and a fair run of chums. In the opinion of the officer the runs of the cohoes and chums to the Goldstream were the best he has seen in the district.

#### *Sooke—Port Renfrew District*

The supply of salmon of the fall varieties entering the few streams in the Sooke district was hardly up to the average.

In the case of Port Renfrew there is usually a good run of coho salmon to the one river. This run apparently is being fairly well maintained, although in future the fishing boundary will be placed farther out from the stream.

#### *Nitinat District*

Nitinat is primarily a fall salmon area. The inspecting officer reports that there are five streams of importance in the district and all have been well seeded. This has reference to the springs, cohoes and chums.

In order to build up the early run of chum salmon steps are being taken to prohibit fishing until October 1st each year.

#### *Barclay Sound District*

The sockeye streams in the Barclay Sound area are those flowing in at the head of Uchucklesit arm and the Sproat and Stamp rivers at the head of Alberni canal. The runs this year were unusually good. Sockeye commenced to arrive in the Stamp river about May 1 and continued through to the middle of October. The spawning beds of the Great Central lake and Ash lake districts, to which the sockeye ascend by means of the Stamp river, were found to be well seeded.

The fishway at Stamp falls is proving a great success and fish have absolutely no difficulty in passing the obstruction, which, previous to the installation of the fishway, was found so difficult, and at times impassable.

The supply of sockeye to the Sproat and Somass rivers and Sprout lakes was found to be similar to that obtaining in the Great Central lake area.

In the stream entering into the head of Uchucklesit harbour the run was found to be the best since the hatchery was established at the head of Anderson lake. While it is difficult to make any accurate estimate of quantities of salmon unless they are actually caught and handled, the local superintendent calculates there were probably 135,000 sockeye reaching Anderson lake this season, as against 70,000 last season, 75,000 in 1927 and 65,000 in 1926. The spawning conditions here were good.

The catch of sockeye was small in the Barclay Sound area owing to there being fewer gill-net fishermen operating and also due to their using poor equipment.

The run of springs to the area generally was found to be better than usual and, in fact, the local inspector states that the quantities of this variety appear to be increasing each year.

In the case of the cohoes, there is also a very excellent supply and a heavy escapement to the spawning areas.

The chum run did not equal that of 1927 or 1928, but was greater than in 1926 and about equal to 1925. While the supply this year undoubtedly showed the effect of the low water conditions and dry season of 1925, yet there was an adequate escapement to the spawning grounds. The spawning grounds of the Nahmint river, however, were later badly scoured by freshets.

In the case of the Toquart and Sarita rivers, which are fished quite intensively, the runs in 1926, 1927 and 1928 were heavy. These streams seem to have suffered somewhat from the low water conditions as explained above, but will receive attention when the cycle year arrives again.

#### *Clayoquot Sound District*

There is a small run of sockeye to the Midgeon river and the supply is being maintained. Owing to the run's early arrival it has not been fished to any extent. The main source of sockeye is the Kennedy lake and river. The salmon arrive at the mouth of the river early in the season but usually remain there a number

of weeks, playing about within two or three miles from the mouth. In view of the intensive fishing during recent years it has been found necessary to keep the fishing boundary well out, notwithstanding the strenuous protests of the salmon purse-seine operators. This season a very excellent supply was reported inside the fishing boundaries and the first reports from the spawning areas were to the effect that there was a most satisfactory run. The later reports, however, modified this statement somewhat, but there is no doubt as to there being a very satisfactory seeding. The necessity for maintaining an effective fishing boundary, however, has been demonstrated by the results of the last two seasons operations particularly.

The chums run in larger numbers to the Clayoquot are than any other variety and the spawning grounds show a good seeding.

#### *Nootka District*

There is a small run of creek sockeye to the Nootka district area and steps are being taken in the way of moving boundaries farther out to the end that the runs may be increased.

Spring salmon were plentiful and as no operations were conducted for this variety in the sound all the fish passed safely to the spawning grounds.

The coho supply is reported to be not so satisfactory, although probably sufficient for a reasonable seeding.

This is not a pink salmon area.

Practically all the chum salmon streams were well seeded. These fish seem to have come in fairly late but arrived in good quantities.

#### *Kyuquot District*

The supply of creek sockeye was found to be fair only in the Kyuquot district. This is, of course, not a sockeye area apart from a few of the creek variety arriving each year.

The run of springs was not more than fair.

The coho run was also reported to be light.

In the case of chums it was felt that there might be a short run, so the fishing was closed considerably earlier than usual to permit what fish were available to go to the few spawning streams there are in this area. It is felt that there will be sufficient for a reasonably good seeding.

#### *Quatsino District*

This is not a sockeye area, although a few of the creek variety arrive each year. These fish are receiving special attention with a view to increasing the run.

The supply of springs is reported to have been very heavy in Marble creek, which is the principal spawning stream of the district for this variety.

There was a good run of cohoes to Marble creek and in the stream flowing in at the head of Rupert arm; in fact, the coho supply generally was good.

The spawning areas were well seeded with chums in the whole area.

#### *Fraser River District*

The outstanding feature of the run of sockeye salmon to the Fraser system was the escapement of exceptionally large quantities to the spawning grounds of the Stuart lake district. These fish arrived on the fishing grounds before there was much fishing equipment in the water and the percentage escaping was consequently very large. The numbers observed in Stuart lake district were greater than for the past fifteen years, at least. They scattered to a large number of tributaries of the Stuart area. These are either the remnant of the old big year on the Fraser, which would have been due in 1929, or the result

of planting eyed sockeye eggs in the tributaries of Stuart lake and the utilization of two small lakes in the vicinity of Stuart Lake hatchery as large retaining ponds. Possibly all three are factors in the resultant good run this year.

Another unlooked for condition was found in the Chilco lake area where it is estimated that 70,000 sockeye spawned in the river just close to the lake. It is many years since any appreciable number of this variety of salmon have been observed in this district.

The conditions in the Bowron Lake area were not encouraging and this also applies to the Quesnel district which years ago was such a prolific sockeye area.

At Shuswap probably 30,000 or 40,000 spawning sockeye reached the spawning grounds at Adams river and Little river. Practically all these were permitted to spawn naturally.

At Harrison lake only a small return was found this year.

It was not expected that any large number would return to Cultus lake in 1929 and it is estimated that the hatchery, after spawning all the fish arriving, will take in the vicinity of 10,000,000 eggs.

At Pitt lake the run of sockeye is being at least well maintained. Year after year conditions at this point have, if anything, improved. A pleasing feature in this district was an unexpectedly large run of sockeye to the Allouette river. The fish were permitted to spawn naturally.

In the Birkenhead district the run of sockeye was not quite as large as usual; 18,000,000 eggs were taken. These are all being retained in the district.

In connection with the run of salmon to the upper Fraser it is pleasing to note this year that the water conditions at Hells Gate were such as to permit of all salmon passing with the minimum of inconvenience.

The supply of spring salmon found on the spawning grounds was not more than an average.

In the case of the cohoes the situation was very similar to that in the case of the springs.

This being the "big" year for pinks the run was found to have been well maintained and very large quantities were found on practically all spawning beds. The pack on Puget sound, through which most of the pinks run coming to the Fraser river, together with that on the river itself, was unusually large, but notwithstanding this the spawning conditions were found eminently satisfactory.

In the case of the chum salmon the run cannot be considered anything more than an average run.

### *General*

Taking the province as a whole, the conditions on the spawning grounds of practically every variety of salmon have been found to be quite satisfactory. In the case of the sockeye, the pack was somewhat smaller than expected, but this was not due to a lack of fish, but to conservation measures and weather conditions. The run of cohoes has been unusually good. The springs were a fair average.

The run of pinks showed that the drastic action taken in 1927, when practically the whole province was closed for a period, was well justified. The supply this year was most gratifying.

The pack of chums was very much smaller than expected, but this again was not so much due to there being a shortage of fish, but was largely owing to the drastic measures taken in the way of conservation. These included the late starting of fishing in certain areas, the early closing in a number of areas, the extension of the weekly close season, and the moving out of fishing boundaries to such an extent that bays and inlets which in the past had been great producers of chum salmon were cut off entirely from fishing. The result has been that the spawning requirements have been taken care of well.

## WHOLE PROVINCE—\*1876 to 1929

Year	Num- ber of can- neries oper- ated	Number of salmon licences issued				Sockeye	Red Spring	Pink Spring	White Spring	Blue- backs	Steel- heads	Cohoos	Pinks	Chums	Totals

NOTE.—Figures shown in black are packs from fish caught at Rivers Inlet or Smiths Inlet. Figures in black for years previous to 1918 are actual packs. Figures shown in italics, 1918 to 1929, are actual packs irrespective of where fish taken, and not including fish shipped out for canning in other districts.

\* 1914 figures include Rivers Inlet pack only, no figures being available for Smiths Inlet for that year.

NOTE.—The column "Varieties other than sockeye packed at Smiths Inlet." For the years this column is utilized, figures of the different varieties other than sockeye packed at Smiths Inlet were not available, and had to be shown as a total. Sockeye for these years are shown under their proper heading.

NOTE.—Licences issued 1923, 1924, 1925, 1926, 1927, 1928 and 1929 include transfers from other districts.

\* For the years 1882 to 1884 and 1886 to 1901 and 1903—particulars of varieties not available—practically all sockeye.

## APPENDIX No. 2

REPORT OF THE WORK OF THE BIOLOGICAL BOARD OF CANADA  
FOR 1929-30

The Biological Board, which operates under the control of the minister and acts as the Scientific Division of the Fisheries Department, was created in 1912 by an Act of Parliament. For ten years the membership of the board consisted entirely of scientists, and two stations for purely scientific and fundamental research were operated for a few months yearly.

In 1923 the Act was amended with a view to bringing the board into closer contact with the department and the practical problems of the fishing industry. Under the amended Act the board now consists partly of scientific men, partly of departmental officers, and partly of men from the industry.

With this new organization, the board now employs a permanent staff of scientists and operates five research stations. Three stations are principally concerned with the more purely scientific and fundamental problems, while the other two, which are known as Fisheries Experimental Stations, deal with problems arising in connection with the handling and preservation of fish.

Three of the stations are located on the Atlantic coast; the Biological Station at St. Andrews, N.B., the Eastern Passage Laboratory at the entrance to Halifax harbour, and the Atlantic Fisheries Experimental Station at Halifax, N.S.

Two are on the Pacific coast; the Pacific Biological Station at Nanaimo, B.C., and the Pacific Fisheries Experimental Station at Prince Rupert, B.C.

In addition, a field station for the investigation of the sockeye salmon is maintained at Cultus lake, B.C., and by courtesy of the University of Manitoba laboratory facilities are provided for carrying on investigations of the fisheries of the prairie lakes.

The board during the year 1929-30 was composed of the following:—

Prof. J. P. McMurrich, Toronto, Chairman.

J. J. Cowie, Ottawa, Secretary-Treasurer.

Prof. Philip Cox, Fredericton, N.B.

Prof. A. T. Cameron, Winnipeg, Man.

Prof. C. J. Connolly, Antigonish, N.S.

John Dybhavn, Prince Rupert, B.C.

Prof. J. N. Gowanloch, Halifax, N.S.

Prof. A. H. Hutchinson, Vancouver, B.C.

Prof. W. T. MacClement, Kingston, Ont.

Prof. Marie-Victorin, Montreal, P.Q.

Prof. H. G. Perry, Wolfville, N.S.

Prof. E. E. Prince, Ottawa, Ont.

Prof. W. P. Thompson, Saskatoon, Sask.

Dr. R. C. Wallace, Edmonton, Alta.

A. Handfield Whitman, Halifax, N.S.

Prof. A. Willey, Montreal, P.Q.

Prof. Alexandre Vachon, Quebec.

J. A. Rodd, Ottawa, Ont.

## THE ATLANTIC BIOLOGICAL STATION, ST. ANDREWS, N.B.

## STAFF

Dr. A. G. Huntsman, Director.  
Mr. H. B. Hachey, Assistant Hydrographer.  
Dr. R. H. M'Gonigle, Assistant Pathologist.  
Mr. A. W. Needler, Scientific Assistant in Marine Biology.  
Mr. R. A. McKenzie, Scientific Assistant in Limnobiology.  
Mr. H. C. White, Scientific Assistant in Aquiculture.  
Mr. M. W. Smith, Scientific Assistant in Limnobiology.  
Miss M. S. Rigby, Secretary.  
Mr. E. G. Rigby, Curator.  
Mr. C. A. Young, Assistant to Curator.  
Mr. A. E. Calder, Master of Boat and Collector.

The Atlantic Biological Station is situated in the midst of the most concentrated shore fisheries of the Atlantic coast (and perhaps of the world), since no other similar stretch of that coast has anything like as great fisheries in either poundage or value as have the waters of Charlotte county, New Brunswick.

## IMPROVED FACILITIES

During the year facilities for carrying on investigations at the Station have been bettered in a number of respects. For the first time accommodation has been provided for workers with families, who would not otherwise leave their homes to undertake work during prolonged periods. For these a double cottage with housekeeping arrangements has been erected. A large open tidal pool has been constructed on the foreshore in front of the laboratory to improve the salt water supply to the laboratory and for experimental purposes. A small cove, which drains at low tide, situated at the head of Passamaquoddy Bay, has been dammed off to permit of the construction at reasonable cost of a series of enclosed tidal pools, in which can be studied the effects of varying tidal interchange and fresh-water inflow, which determine the suitability of inlets for oysters and other important forms living in estuaries.

A small building, formerly used for pumping and power equipment has been enlarged and remodeled to make a two-storey- thirty-six feet by forty feet Fish Handling building. In this has been installed refrigerating equipment of new design, based upon the principles developed in the board's investigations of freezing and storage. An automatic, electrically driven, self-contained ammonia unit with a capacity of seven tons of refrigeration per day operates a trapped and jacketed cold storage space. Built in the jacket is a brine tank available for freezing at any time any quantity of fish per day up to the limit of the capacity of ammonia unit.

## EXPERIMENTAL SALE OF ICE FILLETS

During the year for the experiment in the Toronto market a fairly steady, but limited, supply of the new ice fillets has been put up with the simple, primitive equipment, which alone has hitherto been available—hand machines for making the cakes, small ice and salt tanks for freezing, and a small, antiquated experimental freezer for storage. An automatic machine for making the cakes has been developed and is now ready for final testing. An automatic freezer has been in process of development. Ice fillets of the following varieties have been put up for experimental trial—haddock, cod, pollock, hake, gray flounder, Canadian plaice, witch, and salmon. Small herring have been put up in cakes similar to the ice fillets, and sold as breakfast herring, in an effort to put the “sardines” on the lucrative fresh fish market. The sale of ice fillets in the Toronto market, although successful from the start in January, 1929, is still being carefully followed as a most important sales experi-

ment. Over fifty tons have been sold at standard high prices through the very few channels properly equipped to handle the product. On request an effort has been made to ensure the maintenance of a high quality through supervising inspection. Rapid expansion of the sales has been held back (1) by lack of a full and steady supply of the most desired varieties, (2) by the virtual absence of advertising, which the firms concerned could profitably undertake only when able to distribute to the ultimate consumer widely and regularly, and (3) by the inadequacy of the present commercial methods and equipment for properly storing and distributing frozen fishery products. The mere demonstration of the character and extent of this inadequacy, apart from the introduction of a new product and the general stimulus to the fish trade, has made the experiment very well worth while.

#### BIOLOGICAL SURVEYS

Perhaps the first function of the Stations is the making of a biological survey of the waters. In this field Prof. P. M. Bayne, of Acadia University, has been studying and comparing the life of the various parts of the Bay of Fundy and in 1929 examined into the conditions at the mouth of that bay on the Nova Scotian side, incidentally reporting upon the bait situation in St. Mary bay. Miss V. M. Davidson, of the Toronto High School of Commerce, has now been able to demonstrate from studies lasting for some years that the amount of light from the sun, low at the winter solstice and high at the summer solstice, is almost the only thing to set a limit to the production of vegetable plankton (the primary food for fishes) in Passamaquoddy bay and the adjacent part of the bay of Fundy, so fundamentally rich are these waters. Mr. C. L. Newcombe, a former graduate of Acadia University, has made a quantitative survey of the various kinds of life produced at different levels and on different kinds of bottom as exposed at low tide in the extensive foreshore of the district. A hydrographical and biological survey was made of the waters in the vicinity of Churchill, Manitoba, by Mr. F. Johansen in connection with the general program for studying conditions in Hudson bay and Strait.

#### WATER CLIMATE

Surveys of the water climate or hydrography of the coast form also an important function of the Station. The hydrographer, Mr. H. B. Hachey, has installed thermographs (for the continuous record of water temperatures) on two vessels of the Canadian National Steamships line from Halifax to Bermuda, and the West Indies, has established six stations for the regular recording of temperatures and weather observations at light houses and light ships from Grand Manan at the mouth of the bay of Fundy to Scatari island, Cape Breton, and has studied the source and distribution of the cold rich water at the mouth of Passamaquoddy bay and the tides of the latter in connection with the project to dam it for power purposes. Mr. J. M. Morton, the Assistant for Technical Processes, tested the sea water for the fertilizing phosphates, finding them abundant where the deep water was being brought to the surface and also in the shallow water at the heads of estuaries. Dr. R. H. McGonigle, Pathologist, found that the purity of the water of the region, as judged by tests for sulphuretted hydrogen, is uniformly quite high, and that there is no indication that industrial plants affect the purity to any appreciable degree, owing to the strong tidal action. Professor A. B. Klugh, of Queen's University, was able to measure the amount of important ultraviolet light coming from the sun, and Mr. R. Sawyer, of McGill University, made determinations of the extent to which various rays of the sun's light can penetrate the sea water to bring about the growth of vegetable matter or to act injuriously on various forms of life.

## LIFE-HISTORIES OF FISHES

Attention has been given to individual fishes in studies of their life-histories (migrations, spawning habits, growth, etc.) Mr. A. W. H. Needler, of the University of Toronto, has nearly completed his investigations of the haddock, in which he has been able to demonstrate the occurrence of three geographical stocks or races differing in their distribution, growth characters, and habits. Mr. G. W. Jeffers, of State Teachers College, Farmville, Virginia, has studied the capelin and the cod as they occur together in the strait of Belle Isle. Mr. R. B. Kerr, of the University of Toronto, has begun work on the growth of the Canadian Atlantic salmon, in particular those of the St. John and Miramichi rivers. Miss H. Cameron and Miss H. Reid, of the University of New Brunswick, have been studying the distribution and growth of the white perch and sunfish, respectively.

## LIMITING FACTORS

A number of investigators have been busied with experiments to determine the significance of certain physical conditions for aquatic life. Dr. K. E. Carpenter undertook an analysis of the water supply of the Station to determine whether metals from the pipes were responsible for the death of trout and salmon fry. Dr. M'Gonigle has begun a general investigation of the factors that give trouble in attempts to rear fish in confinement for cultural purposes. Professor Klugh determined the effect of ultraviolet light from the sun on various marine forms, and also the ability of a number of kinds of sea plants to make use of the various rays in the sun's light for their growth, which determines at what depths they can live below the surface of the water. Mr. M. H. Friedman, of McGill University, tested the ability of species of shrimp from different levels to withstand freezing temperatures.

## DISEASES OF FISH

The diseases of fish were given attention, Dr. M'Gonigle taking up the matter of a disease that has appeared among the salmon of Canada for the first time (so far as known) and from the St. Lawrence to the St. John. Miss A. Alley, of the University of Toronto, investigated a disease in the herring of the bay of Fundy, that threatened to develop to serious proportions.

## PHYSIOLOGY AND ANATOMY OF FISH

Professor A. D. Ritchie, of Manchester University, studied the physiology of the muscular system of the giant scallop, and Prof. B. Babkin, of McGill University, and Dr. G. S. Eadie, of Johns Hopkins University, the physiology of the digestive system of various fishes. Miss B. MacDonald, of Dalhousie University, undertook a study of the structure and development of the muscle in fishes, this being the principal part that is used as food.

## DECOMPOSITION OF FISH

Miss A. Bennie, of Queen's University, isolated forty-six cultures of bacteria from the skin and gut of the haddock in order to determine their ability to grow at low temperatures such as occur in iced fish. Many of them were found to grow well at such low temperatures and should, therefore, be kept from infecting the fish. Mr. N. E. Gibbons, of Queen's University, investigated the effects of such bacteria in decomposing the flesh of the haddock. Mr. Morton investigated the effectiveness of disinfecting the surface of gutted and ungutted fish with various strengths of formaldehyde and chlorine solutions, some of which were found to definitely delay decomposition although not allowed to act long enough to reach the flesh of the fish.

## COOKING OF FISH

Miss D. Dow, of the University of Toronto, tested a large number of recipes for the cooking of Ice Fillets and was able to recommend the majority of these as satisfactory. She also investigated the effect of the heat of cooking on the consistency of the flesh of the haddock, finding that for a time at lower temperatures the flesh actually becomes firmer, though at high temperatures it softens rapidly.

## FOOD VALUE OF MARINE PRODUCTS

Miss M. R. Butler began a study of the chemical composition of a number of kinds of algae with a view to determining their suitability for human food, particular attention being directed to iodine and carbo-hydrate content.

## FISH CULTURE

Mr. H. C. White, aquiculturist, made a survey of the various sources of water in the district, principally from springs with regard to their suitability for an experimental hatchery. He also followed up conditions in the Chamcook lake system, including the hydrography and plankton of several of the lakes, the fate of planted salmon fry, and the migrations of young eels up from, and old eels down to the sea. A study of the food of young trout, salmon and sticklebacks in the waters of Prince Edward Island has been continued. Mr. M. W. Smith, Limnobiologist, has studied in detail the physical and biological conditions in experimental stagnant ponds with and without fertilizers, with a view to their use in rearing fish fry. Mr. A. W. H. Needler, Marine Biologist, began an investigation of the oyster fisheries of Prince Edward Island with the object of developing rational cultural practice. A survey was first made to determine the most suitable place for the principal experiments and the Bideford river was selected. Wire baskets containing clean mussel and oyster shells were distributed systematically to determine the localities and depths for the principal set of the oyster spat. Experimental beds were cleaned and planted with spat and with large oysters, and investigations were made of the hydrography of Bideford river, of the possibility of restocking Savage harbour, of the distribution of oysters of various sizes, and of the reported occurrence of disease in a bed of oysters.

## THE FISHERIES OF INLAND WATERS

In Ontario Mr. E. S. Pentland began in November a study of certain freshwater shrimps (*Gammarus*) with the object of developing means for their culture as fish food. Fifteen localities were examined as to the presence and abundance of the kinds and as to the physical conditions. Experimental work is proceeding in the laboratories of the University of Toronto.

Dr. D. S. Rawson, of the University of Saskatchewan, has organized a survey of the principal lakes and streams in the Prince Albert National Park with a view to the conservation and improvement of the fisheries there.

Mr. A. Bajkov has completed an extensive study of the whitefish of the Manitoban lakes. He estimates that the whitefish population of these lakes has remained fairly constant, that of lake Winnipeg at about 6,000,000 individuals, that of lake Winnipegosis at 2,000,000 and that of lake Manitoba at about 500,000. A quantitative estimate of the food supply available indicates that the lakes are capable of supporting a very much greater population of these fish, but the mortality of the eggs spawned under natural conditions is exceedingly high. It is concluded that the productivity of the lakes can be considerably increased by artificial fish culture, provided the fry are cared for over a period of at least one month, the highest mortality being apparently just subsequent to hatching. The available evidence seems to indicate that no considerable migration of whitefish takes place from one of these lakes to another.

Observations have also been made on the food, rate of growth, spawning, etc., of the pickerel in these lakes, the results of which will be presented in a later report. An examination of a number of pickerel was made to determine the frequency of occurrence in them of the immature shape of a tape-worm known to infect human beings. In 300 fish from lake Winnipeg infection was found in 1 per cent, but in fish from lake Manitoba the infection was somewhat higher. The number of fish examined from the latter lake was, however, too few for definite results. It is hoped that investigations now being carried on at the University of Manitoba and elsewhere will result in a knowledge of the complete life-history of the parasite and will give an indication of means that may be taken to counteract the infection.

In connection with the planting of whitefish and cisco in the alkaline Quill lakes of Saskatchewan a small experimental hatchery was set up and eggs of both species were fertilized in the alkaline water. About 90 per cent of the eggs hatched out vigorous and normal fry, and the experiment indicates that both these species may complete their life-histories in the Quill lakes.

## PAPERS PUBLISHED DURING 1929

The following papers on work done in connection with the Station have been published:—

- Battle, H. I.—A note on lethal temperature in connection with skate reflexes. *Contr. Canad. Biology and Fisheries*, N.S., Vol. IV, No. 31.
- Battle, H. I.—Temperature coefficients for the rate of death of the muscle in *Raja erinacea* (Mitchill) at high temperatures. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 32.
- Effects of extreme temperatures and salinities on the development of *Enchelyopus cimbrius* (L.). *Contr. Canad. Biol. and Fish.* N.S., Vol. V, No. 6.
- Berrill, N. J.—The validity of *Lophius americanus* Val. as a species distinct from *L. piscatorius* Linn., with notes on the rate of development. *Contr. Canad. Biol. and Fish.* N.S. Vol. IV, No. 12.
- Digestion in ascidians and the influence of temperature. *Brit. Journ. Exper. Biol.*, Vol. VI, No. 3.
- Burwash, Frances M.—The iodine content of the thyroid of two species of Elasmobranchs and one species of Teleost. *Contr. Can. Biol. and Fish.*, N.S., Vol. IV, No. 9.
- Connolly, C. J.—A new copepod parasite *Choniospaera cancerorum*, gen. it. sp.n., representing a new genus, and its larval development. *Proc. Zool. Soc. Lond.* 1929.
- Coulthard, H. S.—Growth of the sea mussel. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 10.
- Duff, G. L.—Factors involved in the production of annual zones in the scales of the cod (*Gadus callarias* Linnaeus) *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 21.
- Harvey, J. M.—The action of light on *Calanus finmarchicus* (Gunner) as determined by its effect on the heart rate. *Contr. Canad. Biol. and Fish.*, N.S., Vol. V, No. 4.
- Hayes, F. R.—Contributions to the study of marine Gastropods. III. Development, growth, and behaviour of *Littorina*. *Contra. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 26.
- Henderson, J. T.—Lethal temperatures of Lamellibranchiata. *Contra. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 25.
- Huntsman, A. G.—Frozen fish the freshest. *Institute Bull.* May, 1929.
- Koch, L. W.—Notes on Canadian Rotifera, *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 5.
- Klugh, A. B.—The effect of the ultra-violet component of sunlight on certain marine organisms. *Can. Journ. of Res.*, Vol. I, No. 1.

- Reed, Guildford B., Rice, Christine E., & Sinclair, R. G.—A comparative study of autolysis and bacterial decomposition in haddock, lobster and clam muscle. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 18.
- Reed, Guildford B., and Spence, C. Marion.—The intestinal and slime flora of the haddock. A preliminary report. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 19.

- Reid, M. E.—The distribution and development of the Cunner (*Tautoglabrus adspersus* Walbaum) along the eastern coast of Canada. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 27.
- Rice, C. E.—The decomposition of clam muscle in acid solutions. *Contr. Canad. Biol. and Fish.*, N.S. No. 7.
- Scott, W. C. M.—A note on the effect of temperature and salinity on the hatching of the eggs of the winter flounder (*Pseudo-pleuronectes americanus* Walbaum) *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 11.
- Sparks, M. E.—The spawning and development of mackerel on the outer coast of Nova Scotia. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 28.
- Wiley, Arthur—Notes on the distribution of free-living Copepods in Canadian waters. Part II. Some intertidal Harpacticoids from St. Andrews, New Brunswick, *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 33.
- Wilton, M. H. and H. I. Wilton—Conditions affecting the growth of the softshell clam, *Mya arenaria* L. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 6.
- The following is a list of papers published in connection with work on inland lakes:—
- Bajkov, Alexander—Reports of the Jasper Park lakes investigations, 1925-26, VII. A study of the plankton. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 24.
- Bere, Ruby—Reports of the Jasper Park lakes investigations, 1925-26. III. The leeches. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 14.
- Neave, Ferris—Reports of the Jasper Park lakes investigations, 1925-26. II. Plecoptera, *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 13.
- IV. Aquatic insects. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 15.
- Neave, F and A. Bajkov—Reports of the Jasper Park lakes investigations, 1925-26, V. Food and growth of Jasper Park fishes. *Contr. Canad. Biol. and Fish.* N.S., Vol. IV, No. 16.
- Wallis, J. B.—Reports of the Jasper Park lakes investigations, 1925-26, VI. The beetles. *Contr. Canad. Biol. and Fish.*, N.S., Vol. IV, No. 17.

#### FISHERIES EXPERIMENTAL STATION (ATLANTIC), HALIFAX, N.S.

##### STAFF

The following constituted the staff of the Station during the year 1929-30:—

- Dr. A. H. Leim, Director.
- Dr. J. R. Sandborn, Chief Bacteriologist (from May 13, 1929).
- Mr. Ernest Hess, Assistant Bacteriologist (on leave of absence from Sept. 5, 1929).
- Dr. J. H. Mennie, Chief Chemist (from July 3, 1929).
- Dr. H. R. Chipman, Scientific Assistant in Chemistry.
- Mr. S. A. Beatty, Associate Biochemist (from May 10, 1929).
- Miss A. M. Wilson, Technical Assistant in Chemistry.
- Mr. F. Watson, Fishery Demonstrator (resigned June 1, 1929).
- Mr. E. F. Mitchell, Mechanician (resigned July 31, 1929).
- Mr. M. J. Murphy, Mechanician from Aug. 8, 1929.
- Miss M. M. McPhee, Secretary until August 6, 1929. Office Assistant until Nov. 30, 1929 (resigned).
- Miss J. J. Barnstead, Secretary (from August 6, 1929).
- Miss E. C. Alexander, Office Assistant (resigned Sept. 11, 1929).
- Mrs. Esther Stevens, Office Assistant (from Jan. 6, 1930).
- Mr. C. K. Darrach, Factor.
- Mr. Erlyn Harrigan, Caretaker at Eastern Passage Laboratory during season and retained as assistant at Halifax (from June 17, 1929).

##### TEMPORARY STAFF

- (1) *Scientific Assistants*—
- Mr. A. S. Cook (July 1-September 16, 1929).
- Mr. D. LeB. Cooper (July 2-September 14, 1929).
- Mr. G. O. Langstroth (July 2-September 24, 1929).
- (2) *Assistant for Technical Processes*—
- Mr. W. W. Stewart (May 20-September 30, 1929).
- (3) *Inspectors of Ice Fillets*—
- Mr. M. H. Friedman (resigned May 13, 1929).
- Mr. A. S. McFarlane.
- Mr. H. L. A. Tarr (resigned September 19, 1929).

Since these names were not mentioned in the report for 1928-29, it may be recorded that they commenced work with the Board on March 27, 26 and 28, 1929, respectively.

(4) *Laboratory Assistants—*

Mr. E. W. Barnstead (May 6-September 7, 1929).

Mr. H. B. Robertson (June 28-August 31, 1929) at Eastern Passage Laboratory.

The following were special instructors during the Course for Fishermen (January 22-March 4, 1930):—

Mr. Carl Johnson, Motor Engines.

Prof. R. Maxwell, Natural Resources.

Captain H. M. O'Hara, Navigation.

Mr. Joel Smith, Preparation of Dried and Boneless Fish.

By courtesy of the Department of Marine and Fisheries Mr. George Earl and Mr. Robert Gray gave courses in the Preparation of Dried and Boneless Fish and in the Preparation of Pickled Fish, respectively. Similarly by courtesy of the Department of Natural Resources of Nova Scotia Dr. M. Cumming and Prof. W. V. Longley gave courses in Natural Resources. These four persons received no remuneration from the Biological Board.

In addition to the above there were a number of persons tried out as laboratory and office assistants for periods not exceeding two weeks. For various reasons their employment did not continue.

## INVESTIGATIONS

1. *Refrigeration.*—The main investigations of the Station continued to be directed at problems in connection with refrigeration. The problems were attacked from a number of angles, viz:

- (a) The determination of the heat conductivity of fish muscle, frozen and unfrozen. A formula was developed for predicting the time of freezing if the conductivity, thickness of fish and temperature of the refrigerating medium are known. The conductivity was determined for cod, haddock, herring, mackerel and salmon.
- (b) Investigations on effect of storage temperature on frozen fish. A continuation and elaboration of experiments commenced in 1928. After storage for one year for cod it was shown that storage at  $-20^{\circ}\text{C}$ . ( $-4^{\circ}\text{F}$ .) was satisfactory, while at  $-5^{\circ}\text{C}$ . ( $23^{\circ}\text{F}$ .) spoilage was very marked. Intermediate temperatures gave graded results. The changes in expressible fluid were measured and attempts made to work out a better method of measuring the amount of this fluid. The bacteria and moulds which were in part responsible for the spoilage were investigated. An attempt was made to analyze some of the chemical changes in the frozen material under storage. Similar storage experiments at  $-20^{\circ}\text{C}$ . were begun using haddock, and a new series of cod. These were stored with protection from the atmosphere of the storage room, and without complete protection to determine whether odours from other fish, etc., affected the flavour. This series is in progress.
- (c) An improved type of tank for holding fish previous to processing was built and experiments continued on this method of holding fish at a lower temperature than can be obtained with ice. The additional use of chlorine solutions was tried, but no positive benefit could be demonstrated from treatment of the fish with chlorine in various ways.
- (d) Improvements were made in the jacketed cold storage room in the demonstration building whereby the air circulation was under better control. Tests conducted afterwards proved the value of this room for storage in that evaporation from exposed surfaces was reduced to from one-fifth to one-sixth of what it was in an ordinary type of room at an equivalent temperature.
- (e) The freezing point for lobster meat was determined to be  $28.5^{\circ}\text{F}$ .

2. *Smoking*.—The investigations of the fundamental constitution of wood smoke were continued and as in previous years were particularly concerned with the formaldehyde content. Technical difficulties are involved in the estimation of this substance, and the work has been largely exploratory.

As a means of speeding up the smoking process for fish electrical precipitation was attempted with promising results. The desired colour could be obtained in as short a time as fifteen minutes using this method.

With a view to making the smoking of fish independent of the weather, laboratory experiments were carried out using conditioned air for the preliminary drying of the fish. As there was some question of untreated smoke being suited for introduction into chambers through ducts and fans owing to the deposition of tar and subsequent clogging of these parts, smoke was de-tarred by electrical means and found to be satisfactory in producing colour and flavour in the fish exposed to it. The larger, semi-commercial experiment could not be undertaken until the demonstration building was completed.

3. *Salting and Drying*.—The fundamental investigations of the relation between water, salt and protein were continued. A report for publication dealing with these investigations was nearly complete at the end of the year.

Practical tests were carried out on the salting of fish with seven different commercial salts. The product was tested with regard to colour and keeping qualities. This test was carried through twice using different quantities of salt. In the first series an unexpected result was obtained which indicated that an 85 per cent saturated solution was not sufficient to prevent the growth of bacteria and moulds which caused spoilage. The second series indicated that the solar salts gave a whiter fish than the mined salts.

The routine analysis of commercial fishery salts was continued.

4. *Canning*.—Spring mackerel were brine frozen, stored for a time, and then canned in one-pound cans, following a procedure adopted the year previous with fall mackerel. They were compared in flavour with the fall mackerel similarly treated and with spring mackerel which had been canned without freezing. The product was considered to be satisfactory in every way.

Plans were drawn up for a model lobster cannery and also for an inexpensive exhaust box. These plans are available for those interested.

The canning of scallops was investigated with a view to preventing the troublesome disintegration of the muscle. Mr. Hess made use of facilities at the Atlantic Biological Station, St. Andrews, N.B., to carry out this work. He was unable to find a satisfactory solution of the problem and recommended that refrigeration was a more suitable means of handling this product.

Experiments were carried out in an attempt to explain the presence of small crystals in lobster cans and also a slimy condition frequently observed. Preliminary reports have been submitted but final examination of the cans has not been completed.

5. *Fish Oils*.—The effect of freezing of fish livers on the production of oil was further investigated. It was found that freezing of the livers increased the yield of oil when cooking was resorted to. It was found that livers could be frozen, ground up and pressed after thawing, but without cooking, and that they would yield a higher amount of number one oil than could be obtained by cooking. It was subsequently found that a very similar process was patented in the United States.

The relative merits of centrifuges and presses for removing oil from liver chum were investigated.

6. *Fish Meal*.—Routine analyses of samples of fish meal provided by the trade were carried out. Certain lobster meals proved difficult in that some

fifteen per cent of the material could not be accounted for. Determinations of total carbon and total nitrogen have been made in a number of ways with a view to finding the error. A considerable portion remains unaccounted for. Fish meals were made and analyzed using specific portions of different kinds of fish.

**7. Other Laboratory Investigations.**—Determinations were made of the quantity of heat produced during rigor and subsequently in fish muscle. This is important in the holding of unfrozen fish after death.

A systematic study of the bacteria of sea water and in particular of those found on and in fish was begun, and the effect of temperature on certain organisms responsible for spoilage was investigated.

General investigations on the nature of fish proteins were carried on.

Several methods of measuring spoilage in fish after death were investigated chiefly one involving the estimation of trimethylamine oxide, and one dealing with the estimation of amino acids by ninhydrin. None of these tests proved to be of sufficient delicacy to detect the early changes which are important commercially.

The problem of migration of water in fish muscle particularly under conditions when frozen was investigated.

#### DEVELOPMENT OF THE STATION

Two storeys were added to the Demonstration building, which adds four rooms each 18 feet by 32 feet to this building.

A contract was let in September for the construction of a permanent building.

#### ICE FILLETS

During the fiscal year 1929-30 the following quantities of Ice Fillets were manufactured at the Station and shipped for sale in Toronto:—

	lbs.
Haddock.....	4,317
Cod.....	3,408
Halibut.....	2,936
Russet Flounder.....	1,464
Gray Flounder.....	3,300
Mackerel.....	528
Swordfish.....	168
Cusk.....	240

In addition small quantities were disposed of in Halifax, Ottawa and Montreal.

By means of the ice fillets inspectors the production of the ice fillets by the Lunenburg Sea Products Co., Ltd., and the Lockeport Company, Ltd., was supervised during the year.

#### EDUCATIONAL WORK

**1. Courses for Fishery Officers.**—The first course for fishery officers which was in progress when the fiscal year began continued until April 16, 1929. A second course to another group began on April 17 and closed on May 28, 1929. The first course was attended by three Inspectors, seventeen Overseers and five officials from Quebec; and the second course by nineteen Overseers and five officials from Quebec. Each course included instruction in biology, chemistry, and physics, bacteriology, motor engines, navigation, natural resources, preparation of dried and boneless fish, preparation of pickled fish. An examination was held at the termination of the course.

**2. Course for Fishermen.**—So far three schools of instruction have been held. The first took place in January-February, 1928, at which there was an

attendance of nineteen; the second took place in January-February, 1929, at which there was an attendance of twenty-five; the third took place from January 22 to March 4 of the present year, at which there was an attendance of twenty.

The board, from its funds, offered to pay to each fisherman who attends the six weeks course his double railway fare between Halifax and the railway station nearest his home, in addition to a grant of \$45 towards his maintenance when in Halifax at the school. The school was made available only to bona fide fishermen between the ages of seventeen to thirty-five, and who had reached a certain educational grade in the lower schools.

The instruction at the school for the present year was given in the form of six separate courses; each course was in the hands of a highly qualified instructor. The classes began at nine a.m. each morning. Four classes of fifty minutes each constituted the morning session and three classes of fifty minutes each the afternoon one. The subjects of the various courses were as follows:—

(1) *Preparation of Dried and Boneless Fish.*—This comprised practical instruction in heading, splitting, washing, salting and drying fish, also in the preparation of boneless fish, drying and boxing. Each man prepared one thirty-pound box of boneless fish and a quantity of dried fish. Discussions were held on the problems applicable to the various districts from which the fishermen came.

(2) *Preparation of Pickled Fish and the Coopering of Barrels.*—Practical instruction in ripping, scraping, washing, packing and grading herring. The testing of barrels. Each man was required to prepare and pack a quantity of herring in each of the various ways taught.

(3) *Motor Engines.*—This comprised work in disassembling, assembling and repairing gasoline engines, theory of gasoline engines, two and four cycle, carburetors, lubrication, electrical equipment, valves, crude oil engines.

(4) *Navigation.*—This comprised lectures and demonstrations and practical chart work, shaping courses and measuring distances, charts, effect on engine on compass, magnetic compass, magnetic poles, latitude and longitude, Mercator's chart, finding magnetic courses, nautical astronomy, true chart meridian altitudes, turning true courses into magnetic ones, the sextant, fixing ship's position, longitude and time.

(5) *Science.*—This comprised lectures, with demonstrations whenever possible, some of the experiments and microscopic examinations being carried out by the students themselves. The subjects taught under this heading were:—

(a) *Chemistry and Physics*, which included molecules and atoms, heat and temperature. Measurement of heat and temperature. Thermometers. Specific heat and latent heat. Gases, pressure, volume and temperature. Atmospheric pressure. Barometers. Solutions. Saturation of solutions. Density and specific gravity. Hydrometers. Osmosis. Theory of fish salting. Salt and its constituents. Vapour pressure. Evaporation and boiling. Condensation and liquefaction of gases. Composition of atmosphere. Humidity. Properties of oxygen, hydrogen, carbon dioxide. Respiration of plants and animals. The water cycle. Ice and steam.

(b) *Biology and Conditions in the Sea*, which included most important fishes, methods of fishing, location of fish. Migrations. Life-histories of cod, haddock, herring, mackerel and lobsters. Food, rates of growth. Reproduction. Habits and distribution. Seasons in the water. Effect of ice. Effect of tides. Drift bottles. Circulation of water. Effect of physical conditions on distribution of animals.

- (c) *Bacteriology*, which included micro-organisms and plant and animal diseases, fermentation and spoilage of food. Shapes and forms of bacteria. Examinations of bacteria and their distribution in nature. Bacteria of sea water and fresh fish. Factors influencing bacteria in fish. Bacteriology of cured fish, chilling, freezing, drying, smoking, pickling, salting and canning.
- (d) *Refrigeration*, which included Composition and structure of fish muscle. Freezing of salt solutions. Effect of freezing on tissues. Effects of storage. Rapid freezing of bait. Type of freezing tanks. Salt penetration. Types of commercial freezers.
- (e) *Fish Oils*, which included sources of oils, whale oil, menhaden and herring oil, other fish oils, liver oils. Methods of preparation, including actual preparation of cod liver oil by steaming.
- (f) *Food Chemistry*, which included the chemistry of fish when used as food. Nutritive value of food fishes.

(6) *Natural Resources*.—This comprised instruction in goods, wealth, production, division of labour, exchange, theory of value, demand and supply, value and cost of production. Organization, stocks and bonds, trusts, holding companies, banking operations. Co-operation, co-operative marketing, its history, weaknesses, agencies and types. Market information. Cultivation of soil, potato growing, gardening, vegetable growing, and a general talk on the marketing of fish.

Under miscellaneous classes there was given instruction in methods of fish handling, also discussions on the methods of fishing in various sections of the coast. A few illustrated lectures were given in the evenings on such subjects as "Life in the Sea", "Methods of Fishing", "All Flesh is Grass", "The Nature of Sound", and a series of motion picture films dealing with commercial and sport fishing on the Atlantic and Pacific coasts was shown to the class.

The school continued for six weeks. On the closing day written examinations of one hour's duration were held in each of the six major subjects of the course, in order to test the extent to which the instruction was absorbed by the students. In the subject of Preparation of Dried and Boneless Fish ten questions were set. In the subject of Preparation of Pickled Fish and Coopering of Barrels seventeen questions were set. There were ten questions on the subject of Motor Engines. In Navigation there were sixteen questions. In Science there were seven questions. In Natural Resources there were eight questions.

To secure honours the examiners decided that an average of over seventy-five marks for the six subjects, and not less than forty in any one subject, would be necessary. For a pass, however, an average of forty in the six subjects, with no minimum for any one subject, was considered sufficient.

Four of the twenty students passed with honours, one obtained an average of ninety for the six subjects, his lowest in any subject being eighty-one. Fourteen passed, and two failed to make the pass standard.

3. *Dalhousie Course for B.Sc. in Fisheries*.—The portions of this course given by the board commenced on September 30, 1929. There is one student taking all five courses and there are three taking three courses. The courses as given are:—

- (1) General Fisheries: Dr. A. H. Leim.
- (2) Physics and Chemistry of Fish Curing: Dr. J. H. Mennie.
- (3) Fish Culture: Dr. A. H. Leim.
- (4) Bacteriology of Fish Curing: Dr. J. R. Sanborn.
- (5) Biochemistry of Fish Curing: Mr. S. A. Beatty.

## FIELD WORK

At the request of the Department of Fisheries Mr. Hess visited the Magdalen Islands, Quebec, from June 12 to 24. He reported on conditions in some twelve lobster canneries and gave demonstrations at each of the importance of speed and cleanliness in the cannery procedure. While there he put up a pack for his experiments on crystals and slime in lobster cans.

The Station conducted an exhibit of brine freezing methods at the Provincial Exhibition at Halifax during the last week in August. This was repeated at the Exhibition in Lunenburg in September 16 to 21.

Dr. Chipman installed recording thermographs on two boats running to the West Indies, the *Lady Drake* and the *Lady Hawkins* and subsequently kept in touch with their operation. This was in connection with hydrographic work for the Atlantic Biological Station. He also visited Sambro Island to check up on records there in a similar connection.

Further investigation of the water supply at the Windsor hatchery was carried out for the St. Andrews Station during the summer of 1929 by Messrs. Beatty, Chipman and Leim.

## PLANKTONIC AND HYDROGRAPHIC INVESTIGATIONS

Regular observations of temperature and collections of plankton were made at two stations situated in Halifax Harbour (weekly) and Bedford Basin (bi-weekly) during the year. Observations at less frequent intervals during the fishing season were made at a station at the entrance to the harbour.

## EASTERN PASSAGE LABORATORY

During the year the laboratory was fitted up with tables, tanks for salt water, pumps, running fresh and salt water and gas machine. A well was dug, a road constructed on the property and a wharf built.

The station was open for scientific work only during the summer months. The Scientific Director was Professor J. N. Gowanloch. Dalhousie University, through Professor Gowanloch, conducted a summer course in marine biology for two students taking the fisheries course.

So far as the work coming directly under the Board was concerned there were five volunteer investigators at the laboratory. Their names, universities, dates of attendance and problems follow:—

- Miss Eleanor M. L. Chesley, Dalhousie University, June 25-August 27, "Light reactions and schooling activities in fishes (e.g. pipefish and *Gasterosteus*)".
- Miss Elizabeth G. Frame, Dalhousie University, July 5-August 4, August 11-31, "Studies on the Blood of Fishes: Haematopoesis".
- Miss K. K. Holman, Dalhousie University and University of Toronto, June 17-August 15. "Origin of pattern in the alimentary tract of Fishes".
- Miss I. Irvine, Dalhousie University, July 4-August 31. "The effect of feeding mackerel gibbs to lobster. Age Studies on Haddock".
- Miss A. J. Macauley, Dalhousie University, June 24-August 23. "Thermolethal points of Crustacea from surface and deep waters".

## PUBLICATIONS

The following publications dealing with the work of the station appeared during the year:—

- Wynne, A. M.—"The tryptic hydrolysis of haddock muscle.—Preliminary report". *Contrib. to Can. Biol. and Fish.* N.S. Vol. 4, pp. 317-341, 1929.
- Hess, Ernest.—"The Fishing Industry discovers how Smoke Preserves". Food Industries, February, 1929.
- "The amount of Dry Meat in Canned Lobster in Relation to Exhausting and to the age of the Can." *Contrib. to Can. Biol. and Fish.* N.S. Vol. 5, pp. 93-105, 1929.

The following Manuscript Reports of the Experimental Stations were issued from Halifax:—

- No. 20. Langstroth, G. O.—“Heat capacity of fish muscle; latent and specific heats”.
- No. 21. Wyman, H. R.—“The effect of temperature of cold storage on the expressible fluids in fish muscle”.
- No. 22. Langstroth, G. O.—“Preliminary work on the specific conductivity of fish muscle”.
- No. 23. Ross, R. F.—“A preliminary study of the shrinkage of crustacean and fish muscle when exposed to changes in salt concentration and temperature”.
- No. 24. MacFayden, D. A.—“The Investigation of Drip and Juice available for drip in Frozen Fish.”
- No. 25.—Branion, H. B.—“Some observations on the Manufacture and Vitamine Content of Cod Liver Oil and Allied Oils”.
- No. 26. Langstroth, G. O.—“On the rate of freezing of fish muscle. 11”.

Reports received during the Period:—

- Stewart, W. W.—“The relation between storage and the amount of expressible juices from sardine waste”.
- Rice, Christine E., and Hess, Ernest.—“The effect of temperature upon the rate of decomposition of haddock muscle”.
- Hess, Ernest.—“Autolytic and bacterial decomposition of haddock muscle at low temperatures above freezing”.
- Hess, Ernest.—“The Canning of brine frozen mackerel”.
- Cooper, D. LeB.—“Further experiments on wood smoke in connection with the fish smoking industry. Part II.”
- MacFayden, D. A.—“Report of the summer 1927. The investigation of Drip and Juice available for Drip”.
- Hess, Ernest.—“The influence of storage temperature on the quality of canned lobster”.
- Hess, Ernest.—“Report on an inquiry among the lobster canners of the Maritime Provinces with regard to ‘Exhausting’”.
- Hess, Ernest.—“Some preliminary Notes on the Canning of Scallop”.
- Hess, Ernest.—“The amount of Dry Meat in Canned Lobster in relation to Exhausting and to the age of the Can”.
- Hess, Ernest.—“Report on a survey of the lobster canneries and canning conditions on the Magdalen islands (P.Q.)”.
- Branion, Hugh.—“Some observations on the manufacture and Vitamine content of Cod Liver Oil and Allied Oils”.
- Hess, Ernest.—“Preliminary Report on an Investigation regarding Crystal Formation in Canned Lobster”.
- Tarr, H. L. A.—“Some data secured during short trip on Trawler ‘Lemberg’ operated by National Fish Company, Halifax”.
- Hess, Ernest.—“The preservation of scallops”.
- Hess, Ernest.—“Preliminary Notes on the Action of Formaldehyde on the bacterial flora of haddock.”
- Langstroth, G. O.—“On the rate of freezing of fish muscle”.
- Langstroth, G. O.—“Rate of Heating of Cylinder”.
- Langstroth, G. O.—“A note on the heat change in haddock muscle during rigor mortis”.
- Langstroth, G. O.—“Preliminary Note on the Rate of Decay of Fish Muscle”.
- Hess, Ernest.—“Examination of Lobster Cans”.
- Hess, Ernest.—“Canning of Brine Frozen Mackerel”.
- Hess, Ernest.—“The principles involved in the smoke curing of fish”.
- Mennie, J. H.—“Investigation of Lobster Meal”.
- Cook, A. Stanley.—“Trimethylamine Oxide in Fish Muscle”.
- Chipman, H. R.—“Report on Accuracy of Winkler Method for Oxygen”.
- Chipman, H. R.—“Report on Course for Fishermen, 1930”.
- Cooper, D. LeB.—“Report to the Biological Board of Canada. Being the Result of Work carried out at the Fisheries Experimental Station (Atlantic) during the summer of 1929, Section 1—The estimation of formaldehyde in wood smoke distillates. Section II—Preliminary experiments on an apparatus for shortening the time necessary for smoking fish”.

PACIFIC BIOLOGICAL STATION, NANAIMO, B.C.

The Station now consists of two laboratories, biological and chemical, a residence building for the accommodation of scientific workers, a bungalow for the director, and a caretaker's cottage. It possesses a sixty-foot motor boat, two thirty-four-foot fishing boats, a small open launch and several row-boats. The laboratories are equipped with apparatus for general biological,

chemical and oceanographical investigations and are provided with running fresh and salt water, gas and electricity. There is a working library of books, journals, and separates.

#### INVESTIGATORS

The research program is being carried forward by two groups of workers. One is the permanent staff which is engaged directly upon fishery problems. The other is a group of members of the staffs of the Universities of Canada and certain advanced graduate students. These workers spend several months each summer upon various problems, which may or may not have immediate economic bearings. In this way many of the best trained scientists of the Dominion contribute to the advancement of the research program along fundamental lines and they carry back to the Universities an interest in general oceanographical research and the training of younger persons in fisheries, oceanographical and limnobiological research is thereby stimulated.

#### STAFF

Dr. W. A. Clemens, Director.  
 Dr. R. E. Foerster, Associate Biologist.  
 Dr. J. L. Hart, Assistant Biologist.  
 Dr. A. L. Pritchard, Scientific Assistant.  
 Mr. C. R. Elsey, Scientific Assistant.  
 Mr. G. H. Wailes, Temporary Assistant Pilchard Investigation.  
 Mr. C. McC. Mottley, Temporary Assistant Trout Investigation.  
 Mr. L. L. Bolton, Temporary Assistant Salmon Tagging.  
 Dr. W. W. Simpson, Temporary Assistant Salmon Tagging.  
 Mr. Ross Whittaker, Temporary Assistant Salmon Tagging.  
 Mr. D. Beall, Temporary Assistant Salmon Tagging.  
 Mr. H. J. Alexander, Temporary Assistant Salmon Tagging.  
 Mr. R. Wilson, Temporary Assistant Salmon Tagging.  
 Mr. L. McHugh, Temporary Assistant Salmon Tagging.  
 Mr. H. G. Glover, Temporary Assistant Salmon Tagging.  
 Mr. T. C. Wheeler, Temporary Assistant Salmon Tagging.  
 Mr. J. H. Stannard, Temporary Assistant Salmon Tagging.  
 Miss E. Keighley, Secretary and Librarian.  
 Miss E. Robinson, Temporary Typist.  
 Mr. Fred Groth, Captain "A. P. Knight."  
 Mr. J. A. Randle, Engineer "A. P. Knight."  
 Mr. Edgar Black, Deckhand "A. P. Knight." (summer).  
 Mr. Thos. Russell, Caretaker.  
 Mr. Sherman Deno, Groundsman.  
 Miss E. Edwards, Housekeeper (summer).  
 Mrs. E. Riches, Cook.  
 Miss Winnie Riches, Maid.  
 Miss Hazel Neen, Maid (summer)).  
 Miss Violet Foster, Maid (summer).

#### *Voluntary Investigators—*

Miss A. Berkeley, University of Toronto.  
 Mr. C. Berkeley, Nanaimo.  
 Mrs. C. Berkeley, Nanaimo.  
 Miss M. H. Campbell, University of British Columbia.  
 Miss M. Crawford, University of Toronto.  
 Miss J. F. L. Hart, University of British Columbia.  
 Dr. A. H. Hutchinson, University of British Columbia.  
 Mr. C. C. Lucas, Brandon College.  
 Miss V. Z. Lucas, University of British Columbia.  
 Mr. M. MacPhail, University of British Columbia.  
 Mr. J. A. Munro, Okanagan Landing.  
 Miss Jean Panton, University of Toronto.  
 Prof. R. A. Wardle, University of Manitoba.  
 Mr. G. V. Wilby, North Dakota Agricultural College.

## INVESTIGATIONS

1. *Propagation of Sockeye Salmon.*

*A. Relative Efficiencies of Natural and Artificial*—Dr. R. E. Foerster continued his studies at Cultus lake. It will be recalled that the program was planned to determine the efficiency of artificial propagation as compared with natural. Fences were installed in the outlet from Cultus lake so that adult fish coming to the lake and seaward migrating young leaving the lake could be counted. In the years of natural propagation the sockeye returning to Cultus lake are stopped by a picket weir below the lake, trapped, numbers of each sex determined, and then released from the traps to proceed to the spawning beds. In such years a count of male and female adults alone is necessary. Since each female contains, on the average, 4,500 eggs, the total number of eggs which should be deposited in the spawning nests can be computed and the subsequent counts, eighteen months later, of the seaward migrating young resulting from the spawning will determine the percentage of efficiency of natural propagation to this stage. Two methods of artificial propagation are in use at the present time. In one, the eggs are hatched in the hatcheries and the fry liberated into lakes and streams. In the other, the eggs are held only until they reach what is called the "eyed" stage when they are planted by means of a planting box in the gravel bars of streams. These two methods are being tested at Cultus lake, where there is a hatchery. In the years when eggs are being taken for fry or egg planting, no sockeye are allowed to spawn naturally in the lake. The seaward migrants resulting from the above methods of artificial propagation are counted and the percentage of efficiency determined.

In the spring of 1929, the yearling seaward migrants of the natural spawning in the fall of 1927 were counted. They totalled 2,453,634. In the fall of the same year all the fish, 15,000, were stopped at the weir and the eggs collected. Approximately 3,000,000 were subsequently planted in the gravel of the streams tributary to the lake and the remainder transferred to other areas. The following shows the results at Cultus lake to date:—

Year	1925	1926 Fry	1927	1928 Egg Planting	1929 Fry
Method propagation.....	Natural	Artificial	Natural	Artificial	Artificial
Total males.....	1,540	3,122	25,659	3,878	1,244
Total females.....	3,883	1,949	55,569	11,461	3,079
Total eggs contained in all females.....	17,473,500	8,770,500	250,060,500	51,700,571	13,855,500
Total eggs collected.....		6,487,000		32,656,624	10,800,000
Per cent of total eggs.....		74		63.2	76
Downstream Migrants; Fry.....	12,568		116,977		
Per cent of total eggs.....	0.07		0.05		
Yearlings.....	183,272	336,257	2,453,634		
Per cent of total eggs.....	1.05	3.83	0.98		
2-year-old.....	1,722	10,972			
Per cent of total eggs.....	0.01	0.13			
Total migrants.....	197,562	347,229			
Per cent of total eggs.....	1.13	3.96			

*B. Transference of Eggs from One Area to Another.*—In order to test the success of transplanting sockeye from the lower Fraser area to the upper, 500,000 eggs were taken from Cultus lake in the fall of 1928 to Taft, on Eagle river, where they were hatched and the fry placed in retaining ponds. The fry were held until the fall of 1929 when they were marked by means of clipping the fins and then released into Eagle river. A fence for intercepting any return will be installed in the river.

C. *Efficiency of Pond System in Artificial Propagation.*—It is planned to hold sockeye fry in ponds at Cultus lake for approximately six and 12 months and by marking the young fish at the time of release to determine the percentage of survival for each period of retention by counting the seaward migrants.

D. *Hybridization.*—In the fall of 1927 the presence of individuals of the five species of Pacific salmon at Cultus lake offered an opportunity to carry out experiments in the crossing of the several species of Pacific salmon in order to determine the possibility of such a phenomenon in natural spawning, and the probable effect. At the same time some attention was given to the possibility of investigating the effect of selective breeding.

Comparatively good success was attained with the following crosses and the individuals resulting are now being retained in ponds at Smith Falls hatchery:—

Female		Male	Female		Male
Spring.	.. . . .	Pink	Sockeye	.. . . .	Chum
Spring.	.. . . .	Coho	Sockeye	.. . . .	Spring
Pink	.. . . .	Sockeye	Sockeye	.. . . .	Pink
Pink	.. . . .	Chum	Coho	.. . . .	Pink
Pink	.. . . .	Spring	Chum	.. . . .	Spring

It would seem, therefore, that, as far as the power of fertilization and successful hatch are concerned, the above crosses are quite possible under natural conditions. Whether the adults resulting from such crosses would be fertile or sterile remains to be seen.

From an examination of the growth and relative condition of the various hybrid salmon it would seem that the Sockeye female x Chum male, Sockeye female x Pink male, and Pink female x Sockeye male groups would prove most interesting crosses to rear and study from the viewpoint of selective breeding.

2. *Pink and Chum Salmon Investigation.*—Studies are being carried out by Dr. A. L. Pritchard along three lines:—

- (a) *General life-histories.*—First, attention has been given to the Queen Charlotte Islands area where practically every stream and lake has been surveyed. Observations have been made of the principal pink and chum salmon runs, of the spawning habits, of the seaward migration of fry and of local races.
- (b) *Propagation.*—Careful observations of natural propagation have been made and plans are being developed for installing counting fences in a stream in order to obtain accurate data as to the success of natural spawning of pink salmon. In 1931 an attempt will be made to establish a run in the "off" year.
- (c) *Statistical.*—The statistics of the pink and chum salmon runs in various areas along the coast are being worked up.

3. *Salmon Tagging.*—In 1925 an extensive salmon tagging program was commenced in British Columbia for the purpose of securing accurate information concerning the migration routes of all the five species of Pacific salmon. In each year for the past five years, operations have been carried out at various locations along the coast and there is rapidly being obtained a body of information of exceptional value from the scientific and administrative points of view, and of great general interest.

In carrying out the work, there are certain difficulties associated with the nature of the salmon fishing. It has been found from one experiment that fish caught in gill nets are so weakened that only a very small percentage survive after release. Moreover, gill netting is generally carried on at and in the mouths of rivers, and the fish caught in the gill net areas are moving largely into the streams of those areas and their ocean migrations are practically at an end.

In the case of seine fishing, it has been found impossible to successfully tag on board the seine boats, chiefly because of lack of space and of inconvenience caused to the fishermen. In order to tag seine-caught fish, it has been necessary to supply the taggers with boats and small live boxes so that they can follow the seine boats, secure some of the fish, and tag these out of the way of the seine boat operations. Tagging at traps offers few difficulties but at the present time this type of gear is used at the south end of Vancouver island only. Systematic tagging has not yet been attempted there as it seemed more important to obtain information elsewhere. Advantage was taken of the trap operation at Wales island in the north, in 1925. The most successful tagging of spring and coho salmon has been done on board the trolling boats. Taggers have accompanied the trolling boats to sea, selected and tagged the fish as caught.

Perhaps the most startling results have been obtained from the tagging of spring salmon off the west coasts of Vancouver island and the Queen Charlotte islands. A summary of the tagging of spring salmon during the years 1925, 1926 and 1927 is given herewith:—

### 1. *Uchuelet*, 1925.

From May 23 to June 25, 1925, 1,125 individuals ranging in weight from 5 to 58 pounds were tagged and there have been 122 recaptures (10 per cent). The returns are as follows:—

	1925	1926	1927
Barclay Sound area.....	1	7	.....
Cape Flattery area.....	1	2	.....
Strait of Juan de Fuca, B.C. waters.....	5	2	.....
Strait of Juan de Fuca, Washington waters.....	2	3	.....
Puget Sound area.....	13	.....	.....
Fraser river.....	4	1	.....
Coast of Washington.....	1	1	.....
Columbia river.....	42	25	7
Coast of Oregon.....	2	.....	.....
Sacramento River, Cal.....	2	.....	.....
Unknown.....	.....	1	.....
	73	42	7

It will be seen that 25 per cent of these fish turned into the strait of Juan de Fuca, while 65 per cent passed down the coasts of Washington, Oregon and California. The recaptures in the Columbia river amounted to 60 per cent of the total.

### 2. *Uchuelet*, 1926

The tagging in 1925 was carried out over a period of one month only, and so the operations of 1926 were designed to determine if the southward movement indicated by the 1925 operations extended throughout the whole fishing season. The work was therefore carried out from March to September and 1,353 fish were tagged. The returns have been 177 (13 per cent).

	1926	1927	1928
Clayoquot Sound area.....	2	1	.....
Barclay Sound area.....	4	.....	.....
Cape Flattery area.....	1	1	.....
Strait of Juan de Fuca, B.C. waters.....	9	.....	.....
Strait of Juan de Fuca, Washington waters.....	4	1	.....
Puget Sound area.....	26	2	2
Fraser river.....	9	1	1
Coast of Washington.....	1	1	1
Columbia river.....	71	34	1
Unknown.....	1	2	1
	128	43	6

The returns are essentially similar to those from the 1925 tagging. The fish which turned into the strait of Juan de Fuca amounted to 31 per cent while those continuing on down the coast formed 62 per cent. The recaptures in the Columbia river amounted to 60 per cent of the total.

Examination of the returns in the year 1926 shows that the distribution from each month of tagging was essentially similar to the total distribution. From the April tagging, 41 per cent of the returns were from the strait of Juan de Fuca and 60 per cent from farther south; in May, 27 and 70 per cent; June, 34 and 59 per cent; July, 15 and 77 per cent; August, 29 and 57 per cent respectively.

### 3. Quatsino, 1927

The destination of the spring salmon appearing farther up the coast then became a matter of enquiry and in 1927 tagging operations were commenced at Quatsino sound in February 14 and continued until March 30. The fishing in this season was comparatively poor and only 54 individuals were tagged. There have been 7 recaptures (12 per cent) as follows:—

Barclay Sound area.....	1
Puget Sound area.....	2
Columbia river.....	4

While the returns are few, the percentages from the strait of Juan de Fuca (28 per cent), the coast of Washington (57 per cent), and the Columbia river (57 per cent), are similar to those obtained from the Ucluelet tagging.

### 4. Kyuquot, 1927

Following the failure of the fishing in the Quatsino area, tagging was carried out off Kyuquot sound from April 26 to July 16, when 517 fish were tagged. The returns to date have been 73 (14 per cent) as follows:

	1927	1928
Clayoquot Sound area.....	1	
Barclay Sound area.....	3	
Cape Flattery area.....	4	
Puget Sound area.....	4	1
Fraser river.....		1
Queen Charlotte Sound area.....		1
Coast of Washington.....	6	
Columbia river.....	47	
Coast of Oregon.....	2	
Unknown.....	2	1
	69	4

There may be additional returns in 1929. At the present time the percentages of fish going into the strait of Juan de Fuca and down the American coast are very different from those of the other tagging records as given above. Only 8 per cent of the returns were from the strait of Juan de Fuca while 75 per cent were from farther south. The percentage from the Columbia river, 64 per cent, is practically in agreement with those from the other west coast tagging operations.

### 5. Hippa Island, West Coast Queen Charlotte Islands

In 1925 tagging operations were carried out at Hippa island from June 20 to July 25. A total of 274 individuals were tagged and of these 37 (13 per cent), have been recaptured.

	1925	1926
Skeena river.....	2	
Nass river.....		1
Prince of Wales Island, Alaska.....		1
Barclay Sound area.....	2	
Strait of Juan de Fuca, British Columbia waters.....	1	
Puget Sound area.....	2	
Fraser river.....	4	
Coast of Washington.....	1	1
Columbia river.....	7	3
Coast of Oregon.....	12	
	31	6

In the case of the returns from this tagging the percentages from the strait of Juan de Fuca (19 per cent), and down the coast (65 per cent), are in fairly close agreement with the previously described tagging results but the percentage from the Columbia is lower (27 per cent). The returns from the streams of Oregon from the Nehalem river to Coos bay, were relatively numerous forming 32 per cent of the total returns.

A summary of the percentages referred to above is given herewith:—

	Strait of Juan de Fuca	American Coast, including Columbia River	Columbia River
1. Ucluelet, 1925.....	25	65	60
2. Ucluelet, 1926.....	31	62	60
3. Quatsino, 1927.....	28	57	57
4. Kyuquot, 1927.....	8	75	64
5. Hippa, 1925.....	19	65	27

It is probable that the majority of those which turned into the strait of Juan de Fuca were bound for the Fraser river.

It is interesting to note the percentages of the returns obtained in each year:—

	1925	1926	1927	1928
Ucluelet, 1925.....	60%	35	5	
Ucluelet, 1926.....		72	24	4
Kyuquot, 1927.....			95	5
Hippa island, 1925.....	84	16		

The rates at which some of the fish travelled are remarkable as the following indicate:—

Hippa Island to Columbia river, 650 miles, 19 days, 34 miles per day.

Ucluelet to Columbia river, 265 miles, 11 days, 24 miles per day.

Ucluelet to Sooke, 105 miles, 7 days, 15 miles per day.

Ucluelet to New Westminster, 141 miles, 14 days, 11½ miles per day.

Ucluelet to Sacramento river, 820 miles, 76 days, 11 miles per day.

## THE TAGGING OF COHO SALMON

The results from the tagging of coho salmon in the waters of British Columbia during the years 1925, 1926, 1927 and 1928 are here presented in very brief form:—

1. *Uchuelet, 1925*

During the months of May and June 51 individuals were tagged and 5 (10 per cent), were recaptured. The returns were as follows:—

Barclay Sound.....	1
Cape Flattery.....	1
Sooke.....	1
Puget Sound.....	2

2. *Uchuelet, 1926*

The tagging period was more extended covering the months of April to September and 180 fish were tagged. The recaptures numbered 11 (6 per cent), and were as follows:—

Alberni canal.....	1
Hesquiat.....	1
Cape Flattery.....	4
Grays harbour.....	1
Sooke.....	1
Dungeness.....	1
Howe Sound.....	1
Bute inlet.....	1

3. *Kyuquot, 1927.*

During the months of April to August, 135 individuals were tagged, and 8 (6%) were taken. The returns were as follows:—

Kyuquot.....	1
Seymour inlet.....	1
Sooke.....	3
Fraser river.....	1
Columbia.....	2

While the returns from the West Coast tagging are few, they indicate a movement into the Strait of Juan de Fuca as well as down the coast as far as the Columbia river.

4. *Deep Bay, 1927.*

There occur at practically all times of the year in the straits of Georgia large numbers of small coho salmon, frequently called by the fishermen, salmon trout, sea trout, bluebacks, etc. It was decided to tag a number of these small cohoes for the purpose of obtaining information concerning their movements, rates of growth, etc. From April 5 to June 15 there were tagged 357 individuals and 47 (13.5%) were subsequently recaptured. The returns were as follows:—

Hornby-Comox-Lasqueti district.....	7 (15%)
Cape Mudge area.....	8 (17%)
Yuculta rapids.....	2
Flower island.....	1
Half Moon bay.....	1
Jervis inlet.....	1
Nanaimo district.....	4 (8%)
Porlier pass.....	1
Duncan area.....	1
Sooke.....	3
Whidbey island.....	2
Lummi island to Point Roberts.....	6 (13%)
Samish river.....	1
Nooksack river.....	2
Nicomekl river.....	3
Fraser river.....	3
Capilano river.....	1

The results thus show a wide distribution. Seven were taken in the locality where tagged, eleven (23%) went northward and twenty-six (57%) travelled southward. The periods between time of tagging and time of recapture averaged 118 days or practically four months.

Examination of representative samplings of scales showed that the tagged fish were at the commencement of their third years. They had spent one year in fresh water and one in the ocean. The average weight of the fish tagged in April was 2½ pounds; from May 2 to 10 it was 3 pounds; from May 17 to 30 it was 4 pounds, and in early June, 4 pounds. During this period, therefore, the fish increased in weight at the rate of about one pound per month. Accepting 24 weights upon recapture as reasonably accurate, the average increase in weight during the tagged period amounted to about one-half pound per month. Upon the above basis, a coho weighing 2½ pounds on April 15 will therefore attain a weight of about 6 pounds by September 15, possibly sooner.

#### 5. Nanaimo, 1928.

The tagging of small coho salmon was continued in 1928 in the Nanaimo region. From February 14 to July 11 a total of 1,609 fish were tagged and the recaptures amounted to 163 (10%). The returns were as follows:—

Nanaimo area.....	21 (13%)
Qualicum.....	4
Hornby area.....	14 (9%)
Cape Mudge.....	12 (7%)
Toba inlet.....	1
Queen Charlotte sound.....	3
Porlier pass.....	1
Active pass.....	1
Crofton-Duncan area.....	3
Sooke.....	4
Swiftsure bank.....	1
Neah bay.....	2
Dungeness.....	2
Whidbey island.....	14 (9%)
Lummi island to Point Roberts.....	23 (14%)
Samish river.....	1
Skagit river.....	1
Nooksak river.....	3
Nicomekl river.....	1
Serpentine river.....	1
Fraser river.....	41 (25%)
English bay.....	1
Capilano river.....	1
Gower point.....	2
Pender Harbour area.....	4
Jervis inlet.....	2

It will be noted that the distribution of these fish was essentially the same as that of Deep Bay fish. Thirty-four (21%) of the fish went northward and ninety-nine (61%) went southward (Fraser river, English bay and Capilano river included). It is interesting to note that some individuals travelled at least to the entrance to the strait of Juan de Fuca. Twenty-five per cent of the returns were from the Fraser river and twenty-seven per cent from American waters. The average period between capture and recapture was 145 days or nearly five months.

Examination of scale samplings showed the fish to be at the beginning of their third years, having spent one year in fresh water and one year in the ocean.

The average of the estimated weights of the fish tagged in each month were as follows: February 1¼ pounds; March 1½ pounds; April 2 pounds; May 2½ pounds, June 3½ pounds. These weights are considerably lower than those of the fish caught in the Deep Bay region in 1927, but the difference may be due to the fact that in 1928 special small trolling tackle was employed. The average increase in weight during the tagged period was one-half pound per month.

6. *Sooke, 1928.*

From August 13 to 23, 99 coho salmon were tagged for us by Messrs. J. H. Todd and Sons, to whom we are grateful for this assistance. The recaptures totalled 24 (24%) and the distribution was as follows:—

Sooke.....	7 (29%)
Victoria vicinity.....	2
Mill Bay.....	1
Cowichan area.....	1
Active pass.....	1
Dungeness.....	1
Dash Point (Tacoma).....	1
Salmon bank.....	2
Henry island.....	1
Deception Pass.....	2
Lummi Island to Point Roberts.....	1
Fraser river.....	4 (17%)

The general movement of these fish was evidently eastward and northward. The origin is unknown. Since four fish tagged in the Nanaimo area and three in the Deep Bay area have been taken in the traps at Sooke, some of those tagged at the trap may have come from the Strait of Georgia. The significance of the movement westward in the Strait of Juan de Fuca of cohoes in the summer of their maturity is not understood.

7. *Queen Charlotte Sound, 1928.*

From July 21 to October 17, 810 coho were tagged in the Queen Charlotte Sound area, from Bate pass near the north end of Vancouver island to Deep Water bay in Discovery passage. The localities and the number tagged in each are as follows:—

Bate pass, 27, Christie passage, 142, Hardy bay area, 36; Hanson island area, 578; Discovery passage, 27. The general distribution from these localities were similar and therefore the returns are considered as a whole. There have been 77 (9.5%) recaptures, the distribution being as follows:—

Queen Charlotte sound.....	6 (8%)
Seymour inlet.....	1
Stackhouse island.....	1
Knight inlet.....	5 (6%)
Johnston strait.....	7
Lochborough inlet.....	4
Bute inlet.....	13 (17%)
Toba inlet.....	8 (10%)
Discovery passage.....	3
Puntledge river.....	1
Nanaimo area.....	2
Jervis inlet.....	2
Howe sound.....	3
English bay.....	2
Fraser river.....	11 (14%)
Serpentine river.....	1
Puget sound.....	3
Sooke.....	1
Port Renfrew.....	1
Indian river.....	1
Unknown.....	1

It is apparent that the movement of these fish was southward and the distribution very extended. There is no evidence that the fish appearing in any of the tagging areas were bound for single spawning areas. If they occurred in schools bound for certain spawning areas, then in each locality there must have been a temporary association of many schools.

## THE TAGGING OF SOCKEYE SALMON

There is given herewith in very brief form a report on the results of the tagging of sockeye salmon in British Columbia waters during the years 1925 and 1928.

### 1. Haystack Island, August, 1925.

From August 3 to 21, 659 sockeye were tagged and 135 or 20% were recaptured.

The fish were obtained from the trap of the Canadian Fishing Company. The returns were as follows:—

Nass river.....	80
Observatory inlet.....	1
Portland inlet.....	9
Wark inlet.....	3
Dundas inlet.....	1
Skeena river.....	13
Union passage.....	1
Alaskan waters.....	27

The greatest number were caught in the Nass river and neighbouring waters. One salmon was taken in Union passage, Grenville channel, 50 miles south of the Skeena.

The table shows that Haystack island is a meeting point from which the salmon sort themselves out for different spawning grounds. The netting season for sockeye ended on August 21, at which time the catch of all kinds of salmon had greatly declined. There seems no doubt that the close of the netting operations militated against a higher return of tagged fish.

### 2. Deepwater Bay, Seymour Narrows, 1925

Between August 7 and 14, there were tagged 519 individuals, obtained in Deepwater bay from purse seines. About half the total number of tagged fish had the olfactory nerves severed before they were liberated, the purpose being to determine whether the olfactory sense organs influenced the fish in selecting certain rivers and tributaries of rivers during the upstream spawning migration.

Of the tagged fish, 107 (20 per cent) were recaptured, 106 taken in British Columbia and 1 in United States waters. Of the 256 normal fish, 65 (24 per cent) were recaptured, and of the 259 operated fishes, 42 (16 per cent) were retaken.

Locality	Normal fishes	Operated fishes
Lower Fraser river.....	53	18
Birkenhead river.....	2	1
Hell's Gate, Fraser river.....	1	.....
Point Grey.....	3	4
Whidbey island, Wash.....	.....	1
Agememnon channel.....	1	.....
Deepwater bay.....	3	14
Toba inlet.....	1	2
Ramsay arm.....	1	1
Phillip's arm.....	.....	1
Total.....	65	42

The great majority of the returned fish, viz., 75, were taken in the Fraser river, and it is justifiable to conclude that of the Sockeye in Deepwater bay, a considerable percentage were on their way to that river. The results from the operated individuals are not clear. A good percentage (45 per cent) were retaken in the Fraser river or its tributaries, but at the same time 33½ per cent were recaptured in the same area in which they were tagged.

### 3. Fraser River, 1928

During the summer of 1928 a tagging experiment was undertaken on the Fraser river, the purpose being to ascertain, by tagging daily in the lower river a representative number of Sockeye throughout the run, whether the fish bound

for the spawning beds of the various tributary streams enter and pass up the river at different relative times during the season or whether the distribution is more or less uniform throughout the period of the runs.

The fish were obtained from the traps at Point Roberts and the results of the experiment were:—

Location of Tagging	Number tagged	Number recaptured
Mouth of river.....	57	11
Two miles above Ewen's cannery.....	20	5
2-3 miles above New Westminster bridge.....	64	7
Hammond.....	25	3
Mount Lehman.....	141	18
Matsqui.....	95	12
	402	56

The distribution of recaptured fishes was:—

Point Roberts.....	1
English bay, Vancouver.....	1
Mouth of Fraser river.....	8
Below New Westminster.....	21
New Westminster to Agassiz.....	19
Birkenhead river.....	6
	56

The returns indicate a general disinclination on the part of the fish to continue upstream from the point of their release. Of the 23 returns from fish tagged below or within 2 or 3 miles above the New Westminster bridge, 12 show no marked movement; 5 went upstream, 4 downstream, and 2 tagged at the mouth of the river moved away from the river; 33 returns from fish released above this point show 6 fish taken close to the point of tagging, 20 taken downstream and 7 reported from higher upstream.

The conclusions derived from the experiment, while adding little to the knowledge of the periods during which the various "races" of sockeye bound to the several spawning grounds of the Fraser river enter the river, are, nevertheless, of importance. They show:—

1. That the fish normally transfer from salt water to fresh in a gradual and rather leisurely manner.

2. That any attempt to hasten this transfer is, in general, likely to be unsuccessful, the fish tending either to return towards the sea or remaining where liberated for some time before proceeding upstream.

3. That the normal rate of movement upstream is slow, the average being probably in the vicinity of four miles a day.

#### THE TAGGING OF PINK SALMON, 1928

A summary of the results of tagging pink salmon in August, September and October, 1928, is given herewith.

During these months 207 individuals were tagged in the region of Discovery passage, Johnston and Broughton straits, from Bate's passage to Robson's bight. Of this number, twenty-two or 10.6 per cent were recaptured as follows:—

Knight inlet.....	1
Ramsay and Phillips arm.....	3
Johnston straits.....	14
Bear river.....	3
Robson's bight.....	1

No recaptures were made in exactly the same locality where tagging took place. This would seem to indicate that the pinks were not tarrying in these

areas but were moving toward spawning rivers. The greatest distance traversed was from Hardy bay to Ramsay arm, about 100 miles. This journey was made at a minimum rate of three miles per day.

Evidence that the fish moved from one place to another in small groups at least, if not in schools, is afforded by the fact that of eighteen tags affixed in Robson's bight twelve were later obtained at Salmon river.

#### Conclusions

1. The principal migration of pinks in the Johnston and Broughton strait region took place in an east and southerly direction.

2. After they had collected in spawning schools they did not travel far but went chiefly to local streams. This condition was shown to be true for those in Alaskan waters (Gilbert and Rich, 1926).

3. Returns reported seem to indicate that pink salmon taken in Robson's bight are largely made up of fish on their way to Salmon river to spawn.

4. Failure to capture any tagged pinks south of Discovery passage indicates that pinks of Johnstone and Broughton straits did not contribute to Fraser river runs this year (1928).

#### THE TAGGING OF CHUM SALMON, 1928

The results from tagging of chum salmon in British Columbia waters during 1928 follow in brief form.

Of the 1,031 tags affixed, 148 or 14.4 per cent were returned as listed below.

##### 1. Tagged in Bates passage.

Returned—

Sointula cannery.....	1
-----------------------	---

##### 2. Tagged at Robson's bight (Johnstone straits).

Returned—

Squamish, Howe sound.....	1
Point Roberts.....	1
Nanaimo.....	1

##### 3. Tagged in Discovery pass, Chatham point, to Deep water bay.

Returned—

Alert bay.....	1
Bute inlet.....	1
Granite bay.....	2
Deep Water bay.....	24
Deep bay, Vancouver island.....	2
Malaspina inlet.....	1
Powell River region.....	2
Comox-Union Bay.....	5
Qualicum.....	30
Nanaimo.....	7
Myrtle point.....	1
Jervis inlet.....	6
Howe sound.....	9
Fraser river.....	48
Puget sound.....	6

The records of three individuals going northward, one to Granite bay, one to Alert bay and one to Bute inlet, are of interest since only three out of all those retaken were caught in localities farther north than where they were tagged.

The relatively large returns from Qualicum and the Fraser river may be somewhat exaggerated due to concentration of the commercial fishery at these points.

The greatest distance travelled was from Deep water bay to Discovery bay, Puget sound, about 170 miles. This was accomplished most quickly of any journey, namely, at a minimum rate of 21 miles per day.

#### Conclusions:

1. Chums travelled much farther than pinks after they appeared in Johnstone and Broughton straits.

2. They apparently chose two main routes, both of which were southerly, viz., lower mainland and Vancouver island.

3. The mainland run was the larger and went mainly to the Fraser river, although a few did go to the inlets en route and a few southward into American waters.

4. The Vancouver island run went chiefly to Qualicum but several were recaptured at Nanaimo.

#### SPRING SALMON, CAPTURED AT NORTH ISLAND, QUEEN CHARLOTTE ISLANDS, 1929

Number tagged, 404, Number returned, 51 (12%)

Location of Recapture	Number	Percentage
North island.....	2	3.8
Alaska.....	1	1.9
Skeena.....	4	7.7
Rivers inlet.....	1	1.9

Straits of Juan de Fuca.....	3	8·6	2·7
Puget sound.....	6	17·1	5·4
Fraser river.....	7	20·0	10·8
Washington.....	1	2·8	5·7
Columbia river.....	5	14·3	27·0
Oregon.....	7	20·0	32·4

4. *Annual Study of Sockeye Salmon Runs.*—Dr. and Mrs. W. A. Clemens studied the collection of sockeye salmon scales and data of 1929 collected by the Provincial Fisheries Department from the Nass, Skeena and Fraser rivers and from Rivers inlet. This series of annual reports constitutes one of the most comprehensive and continuous records of any fishery.

5. *Pilchard-Herring Investigations*.—Under the joint auspices of the Provincial Department of Fisheries and the Biological Board, Mr. J. L. Hart has commenced a comprehensive study of the pilchards and herring along the following lines:—

- (a) Practically complete statistics of the catches of pilchards from the beginning of the fishery have been obtained from the companies and the basis established for determining the relationship of catch per unit of effort.
- (b) Basis established for the sampling of catches.
- (c) Basis established for the annual statistical analyses of the catches with regard to length and weight.
- (d) System being developed for the accurate annual record of the spawning of herring in all important areas.
- (e) Program being developed for the study of the life histories in relation particularly to hydrographic and food factors.
- (f) Plans for the investigation of the alleged pollution of herring spawning areas by reduction plants.

The study of the distribution and abundance of the food organisms of the pilchard, commenced by Dr. H. C. Williamson, is being completed.

During the month of March, Mr. J. A. Munro, Chief Federal Migratory Bird Officer for the Western Provinces, continued his study of the relation of gulls and ducks to the spawning of herring in the Departure Bay region. His report is now completed and ready for publication.

#### 6. *Shellfish*

(a) *Oysters*.—While no studies were carried out in British Columbia waters this year, Mr. C. R. Elsey spent two months at Willapa harbour, Washington, in association with Prof. T. Kincaid. The experience gained will be extremely valuable. The appointment of Mr. Elsey as full-time investigator will assure important progress in the investigations.

It is planned during the coming year to carry out extensive studies along the following lines:—

- (1) To study intensively the life histories of the native oyster, the introduced eastern oyster and the introduced Japanese oyster.
- (2) To attempt to establish the Japanese oyster in areas where the native and eastern oyster do not appear to thrive.
- (3) To investigate the conditions under which the eastern oyster spawns and spats in British Columbia waters.
- (4) To study the possibility of improving the methods of production of all three species.

Special attention will be given to the Boundary Bay and Ladysmith Harbour areas.

(b) *Shrimps*.—Miss A. Berkeley continued her studies of the life histories of the commercial shrimps of British Columbia. The discovery that shrimps are all males for the first two years of their lives and then change to females is of particular interest.

(c) *Clams*.—Dr. C. M. Fraser is completing a report on the razor clams of the Queen Charlotte islands.

7. *The Trout of British Columbia*.—Mr. C. McC. Mottley spent three months investigating the Kamloops trout in the Okanagan district. Prof. J. R. Dymond and Mr. Mottley will shortly issue a popular illustrated account of the trout of British Columbia, a technical report on racial studies, and a special report on the Kamloops trout.

8. *Ling Cod*.—Mr. G. V. Wilby has carried out a study of the life history of the ling cod, covering its spawning habits, development, rate of growth, food, etc., and of the statistics of the catches in various areas.

9. *Fish Parasites*.—(a) The external parasites of the fish of the strait of Georgia have been studied by Miss Ruby Bere and a detailed report is practically ready for publication.

(b) The internal parasites of fish, especially of salmon, are being studied by Prof. R. A. Wardle.

10. *Oceanography*.—Dr. A. H. Hutchinson, Mr. C. C. Lucas, Mr. M. MacPhail and Miss Campbell continued their studies of the physico-chemical conditions and of the plankton in the strait of Georgia, extending the area of the investigation chiefly to the northward as far as Johnstons strait and Bute inlet. Special attention has been given to the inflow of fresh water and its relation to the development and distribution of the plankton. The distribution, fate and influence of the Fraser river water has been studied in detail.

The oceanographical data collected by Dr. H. C. Williamson on the west coast of Vancouver island during the past several years is being assembled.

11. *Faunal Studies*.—The systematic study of the fauna of our waters was carried forward by Mrs. C. Berkeley on polychaet worms, by Miss J. F. L. Hart on Cumacea, by Miss V. Z. Lucas on Ostracoda, by Miss M. H. Campbell on Copepoda, by Prof. J. R. Dymond on marine and freshwater fish, by Mr. G. H. Wailes on Protozoa and diatoms.

12. *Biochemical and Physiological Researches*.—(a) Mr. C. Berkeley has worked out an interesting symbiotic relationship existing between a polychaet worm and a flagellate.

(b) Miss M. Crawford investigated the utilization of silica by marine diatoms. It was expected that the results of this study would have a bearing upon the problem of silicosis.

#### EDUCATION

A two-weeks' course of instruction was given at the University of British Columbia to the superintendents of hatcheries of the province. The instructors were Dr. R. E. Foerster in fish culture and fish diseases, Mr. D. B. Finn in physics and chemistry, and Dr. W. A. Clemens in fish anatomy and physiology and the identification and life histories of the fresh water fishes of British Columbia.

#### CONFERENCE

The annual conference of the scientific staff and investigators of the board was held during the first week of September at the Nanaimo Station. Twenty-three investigators were in attendance and fifteen reports on investigations were presented. Dr. C. M. Fraser gave an evening address on his visits to various biological stations of the world.

#### INTERNATIONAL PACIFIC SALMON FEDERATION

A meeting of the Federation was held in April in Vancouver, where the Biological Board was represented by Dr. R. E. Foerster, Mr. A. L. Pritchard, and Dr. W. A. Clemens. Reviews of the salmon investigations being carried out by the Biological Board were presented.

## CANADIAN FISHERIES ASSOCIATION

At the convention of the association, held in August in Prince Rupert, Dr. W. A. Clemens gave a summary of the work of the Pacific Biological Station. The eastern delegates later visited the station.

## RECENT PUBLICATIONS FROM STATION

Some twenty-six publications based upon work done at the station have appeared during the past year. These are as follows:—

- Berkeley, A.—The Commercial Shrimps of British Columbia. Museum Notes, Vancouver, Oct., 1929.
- Berkeley, Edith.—Polychaetous Annelids from the Nanaimo District. *Contrib. Can. Biol. and Fish.*, 1929.
- Campbell, M. B.—Preliminary Quantitative Study of the Zooplankton in the Strait of Georgia. Trans. Royal Soc. Can., 1929.

FISHERIES EXPERIMENTAL STATION (PACIFIC)  
PRINCE RUPERT, B.C.

## STAFF

Director, Mr. D. B. Finn.  
Biochemist (on leave), Dr. T. Ingvaldsen.  
Organic Chemist, Mr. H. N. Brocklesby.  
Bacteriologist, Mr. R. H. Bedford.  
Mechanical Engineer, Mr. O. C. Young.  
Assistant Chemist, Mr. L. F. Smith.  
Assistant Chemist, Mr. O. F. Denstedt.  
Laboratory Assistant, Mr. Bruce Stevens.  
Secretary, Miss R. Gillies.  
Factor, Mr. H. Richmond.

*Summer Workers, 1929*

Bacteriologist, Prof. W. Sadler.  
Assoc. Bacteriologist, Mr. D. C. B. Duff.  
Scientific Assistant, Mr. P. Black.

## BUILDINGS

The existing building has undergone but slight modification, the principal changes being in the installation of a bacteriological laboratory on the ground floor.

Plans and specifications for building No. 2, have been drawn up and approved. Contracts have been let for the construction of the building with the exterior complete but with only the basement finished inside, the ground and second floors being left for completion of the interiors at a later date. A low temperature research laboratory is being constructed in the basement. The building contract will be complete on May 31, 1930.

## EQUIPMENT

The station now possesses well equipped biochemical, chemical and bacteriological laboratories. It also has a small nutrition laboratory which is in need of extension in view of the work which should be undertaken upon fish meals and other edible marine products.

## INVESTIGATIONS

The investigations of this station are at present carried on under two main divisions: I. Preservation, which may include all investigations having to do with the processing or marketing of fish and other marine products. II. By-products, under which are grouped those studies which deal with the utilization of waste materials or of marine products which are not used primarily as food for human consumption.

*Preservation*

*Discolouration of Halibut.*—Following the work of Harrison and Sadler who traced the discolouration of halibut in the holds of fishing vessels to a specific bacteria, experiments were conducted with appropriate germicides which would kill the causative organism but without injuring the quality of the fish.

In his connection there are two factors of equal importance in disinfection to be considered:—

- I. That of the water for ice making,
- II. The holds of the vessels.

Two efficient germicides were considered: (1) Chlorine and its compounds, (2) Formaldehyde. The former was eliminated from serious consideration owing to (1) cost of installation for water sterilization, (2) possible harmful effect upon fish, (3) damage to vessel and gear.

Formaldehyde combines germicidal and preservative properties. It has proved effective in the sterilization of ice and in killing large numbers of micro-organisms in the presence of considerable quantities of fish slime (28% organic matter). The concentrations required for this are of economic significance, 0.005% being required for the former and 2% for the latter.

The practical applications of laboratory findings indicate that the control of discolouration by methods which involve the complete sterilization of the ice and vessels is impracticable.

New methods for control of the organism are being developed. It is hoped that the elimination of discolouration may be brought about, not by elimination of the bacteria, but by producing conditions within the vessel and on the surface of the fish which will inhibit its growth.

#### REFRIGERATION

A low temperature research laboratory has been designed and is being constructed in the basement of the new building. Its equipment will include storage rooms of controlled temperature having a temperature range from -20° F. upwards. Its freezing equipment will permit the use of temperatures from -40° F. to 32° F. The laboratory will be provided with automatic temperature control and its thermometric system will include both resistance thermometer and thermocouples.

The chemical researches on the storage of frozen fish which have been initiated will be carried forward with these new facilities. A series of engineering studies upon cold storage practice will also be made. These will include the erection of a demonstration "Jacketed Cold Storage Room" which has been developed at Halifax.

The investigations will include:—

- (I) An Examination of the Chemical and Physical Changes which Occur in Fish During Cold Storage.
- (II) A Chemical Study of "Rusting".
- (III) A Study of Methods for Cooling Cold Storage Rooms.

#### SALMON SPOILAGE

With a view to improving the quality of salmon as they are landed at the canneries, a bacteriological investigation of salmon spoilage has been undertaken. This investigation includes a study of various methods of storage in fishing vessels. A preliminary study of the bacterial flora of salmon before its contamination has been made. The work will be continued during the coming year. A preliminary report entitled "The Bacterial Spoilage of Salmon with Reference to the Source of the Organisms Responsible for Putrefaction" has been issued.

#### *By-Products*

*Fish Oils.*—The production of fish oils on the Pacific coast has risen from 500,000 gallons in 1926 to 4,000,000 gallons in 1928 for which the increased production of pilchard oil has been mainly responsible. Its highly unsaturated character makes possible its use in certain types of paint. However in its natural state, it possesses certain chemical characteristics which make it undesirable for this purpose. Very little is known of its chemical constitution or of the effect which various methods of manufacture may have upon its composi-

tion. With a view to correcting its defects as a paint oil, the station has undertaken an examination of its chemical and physical properties. In addition to this detailed studies of methods for its preparation are being conducted.

During the course of experiments dealing with the bodying of pilchard oil with various catalysts it has been found that while the water resisting properties, the flexibility and the drying times are satisfactory, the paint film is somewhat softer than that produced by linseed oil. Further investigation is necessary before this defect can be overcome. The research includes:—

- I. The preparation of Pilchard Oil for use in Paints,
  - (a) The Bodying of Pilchard oil by Catalysts.
  - (b) The Study of Paint films prepared from Pilchard Oil.
- II. The Chemical Constitution of Pilchard Oil,
  - (a) The Unsaturated Fatty Acids.
  - (b) The Polymerization of the Unsaturated Esters in Pilchard Oil.

*Glues.*—Various methods for the production of glues from the waste liquors of fish meal plants have been examined. From these methods those have been selected which will give a satisfactory glue from the point of view of strength tests and at the same time most nearly approach existing methods of fish meal manufacture. Large samples have been prepared in an industrial fish meal plant. These samples are now being examined in order to determine the limits of impurities which can be tolerated. These data will be used to determine the extent of factory modification necessary for the production of fish glues.

The study includes:—

- I. The Effect of the Salt content upon the Physical Properties of Fish Glues.
- II. The Preparation of Fish Glues in Commercial Meal Factories.

Part of this investigation is being conducted in co-operation with the Forest Products Laboratory, Vancouver, B.C.

*The Nutritive Value of Marine Products.*—Together with the increased production of fish oils there has been a similar increase in the production of fish meal. These meals are being used as stock and poultry feeds. Since Pacific coast fish meals are made from oil containing fish and often contain appreciable quantities of unsaturated oils there have arisen many problems with regard to the proper use of these substances as feed stuffs. It has been found that methods of fish meal manufacture have a distinct bearing upon its nutritive value. Researches are in progress which have as their purpose the development of methods for the production of fish meal at its optimum value in nutrition. The problem of deterioration of the product on storage is also being looked into.

A survey of the vitamine content of fish oils has also been undertaken. An assay for vitamins A. and D. has been made on the liver oil of the Dogfish (*Squalus sucklii*). The vitamine D. content of pilchard oil has been reported and a vitamine A assay on the same oil is in progress.

The researches are being conducted as follows:—

- (1) The Effect of the Oil Content of Pilchard Meal upon its Digestibility and its Biological Value.
- (2) The Influence of Fish Meals on Growth.
- (3) The Vitamine A content of Pilchard Oil.
- (4) The Effect of Ingested Fish Oils upon the Nature of the Body Fat.
- (5) The Effect of Storage upon the Nutritive Value of Fish Meals.

## APPENDIX No. 3

## FISH CULTURE

ANNUAL REPORT BY J. A. RODD, *Director*

Operations of the department during the calendar year 1929 were devoted to the propagation of the more important freshwater and anadromous food and game fishes, including Atlantic and landlocked salmon, speckled, brown, Loch Leven, and rainbow trout in the Maritime Provinces, whitefish, pickerel, cutthroat, rainbow, brown and Loch Leven trout in the Prairie Provinces, and Pacific salmon (principally sockeye), cutthroat, Kamloops, rainbow, and speckled trout in British Columbia.

Existing facilities for retaining and feeding fry so as to afford a longer season for distribution were enlarged at several establishments where such development was feasible. The total distribution for 1929 was over twenty-one per cent larger than it was in 1928, and almost twice as large as the distribution for 1927. The distribution for these years was:—

1927.. . . .	295,283,782
1928.. . . .	470,302,380
1929.. . . .	570,771,626

Increases over 1928 in numbers distributed were made in rainbow, cutthroat, speckled and Kamloops trout, sockeye and spring salmon, and whitefish. The bulk of the increase was, however, in whitefish fry distributed in the Prairie Provinces, which was increased from 129,183,026 in 1928 to 216,755,000 in 1929.

The numbers of each species distributed were:—

STATEMENT, BY SPECIES, OF THE FISH AND FISH EGGS DISTRIBUTED FROM THE HATCHERIES DURING THE YEAR ENDED DECEMBER 31, 1929

Species	Green eggs	Eyed eggs	Fry	Advanced fry	Fingerlings	Yearlings and older	Total distribution
<i>Salmo salar</i> —Atlantic salmon...	1,350	200	2,670,752	1,698,000	13,032,684		17,402,986
<i>Salmo salar sebago</i> —Landlocked salmon.....				94,713			94,713
<i>Salmo irideus</i> —Rainbow trout.....		315,215	467,061	404,450	509,372	18	1,696,116
<i>Salmo clarki</i> —Cutthroat trout.....		240,060	1,259,869	799,500	149,080		2,448,509
<i>Salmo gairdneri</i> —Steelhead salmon.....		35,000	62,892		78,652		176,544
<i>Salmo gairdneri kamloops</i> —Kamloops trout.....	130,000	2,010,500	1,263,756				3,404,256
<i>Salmo trutta leuvenensis</i> —Loch Leven trout.....				120,000	386,100	12	506,112
<i>Salmo fario</i> —Brown trout.....					144,312	911	145,223
<i>Oncorhynchus nerka</i> —Sockeye salmon.....	505,000	35,868,310	47,326,224	50,000	13,164,571		96,914,105
<i>Oncorhynchus tshawytscha</i> —Spring salmon.....		275,000	1,041,410		218,870		1,535,280
<i>Oncorhynchus kennerlyi</i> —Kennerly's salmon.....		264,000					264,000
<i>Salvelinus fontinalis</i> —Speckled trout.....		235,000	781,748	246,100	8,177,170	2,291	9,442,309
<i>Coregonus clupeaformis</i> —Whitefish.....	44,125,000		172,630,000				216,755,000
<i>Cristiomer namaycush</i> —Salmon trout.....				49,000	200,728		249,728
<i>Stizostedion vitreum</i> —Pickerel.....	108,035,000	170,000	111,047,500				219,252,500
	152,796,350	39,413,285	338,551,212	3,461,763	36,061,539	3,232	570,287,381 (a)

(a) This distribution represents output 1929 resulting from autumn spawners of 1928 and from spring spawners of 1929.

In addition to the above 484,245 cutthroat trout eyed eggs were purchased from S. S. Drew, Esq., Troy, Montana, and planted direct as follows:—

Fraser River watershed—	
Sumas river.....	25,000
Kanaka creek.....	25,000
Nicomekl river.....	434,245
	<hr/> 484,245

In addition to the distributions that were made from the hatcheries, twenty-eight lakes and streams received allotments of fingerlings and older fish by transfer from other bodies of water. This work was very largely confined to the Prairie Provinces where there are many districts which are not readily accessible to existing hatcheries and which have many bodies of water of indifferent quality, in which the better class of fishes, such as are handled in our hatcheries, are not likely to live and thrive. This work involved the capture and transfer, in many instances, for considerable distances of 18,274 fish.

It will be observed from the following statement that the transfers made during 1929 consisted very largely of yellow perch, which are giving good returns in many waters that were barren previous to the introduction of this species.

## STATEMENT SHOWING THE TRANSFERS OF FISH FROM ONE BODY OF WATER TO ANOTHER DURING 1923

## FISHERIES BRANCH

169

Waters stocked		Transferred from	Stage	Crayfish	Minnows	Perch	Pickarel	Total
Little Saskatchewan river at Brandon, Man.		Echo lake...	2 yr. olds			1,000		1,000

				500	500	16,674	600	18,274

The seeding, with eyed eggs, of isolated waters, to which it is not feasible to transfer fry from existing hatcheries, was continued in British Columbia, 16,939,000 sockeye eggs collected in the fall of 1928 below Hell's Gate were planted out from Cultus, Harrison and Pemberton hatcheries early in 1929 in an eyed condition above Hell's Gate as follow: Shuswap Lakes district: Eagle river 16,037,000; Salmon river, 602,000; Anderson-Seton lakes, 300,000.

The whitefish hatching battery on the C.G.S. *Bradbury* was again utilized at the egg collecting camp on Dauphin river, lake Winnipeg, in handling the eggs there as they were collected and until they could be transferred and placed in the hatchery at Gull Harbour. This battery was also utilized for distribution purposes, and 24,525,000 whitefish fry from the Gull Harbour hatchery in the southerly portion of lake Winnipeg were distributed, as they hatched, much farther north and over a more extensive area than would have been otherwise feasible.

Fish cultural officers are annually becoming more familiar with their respective distribution areas, and are endeavouring to seed them to the best advantage with crops of fry and older fish, that are annually available for that purpose, so as to obtain best results in mature fish. In addition to inspections by fish cultural officers, a considerable number of lakes and streams were also examined and reported on by the supervisors of fisheries and fishery officers, particularly in the Prairie Provinces. Copies of all reports of this nature are supplied in duplicate to the Chairman of the Research Committee on Fish Culture of the Biological Board for the information of the committee's workers in the respective districts. Inspections and investigations of a special nature are also referred to the committee of the board on fish culture as occasion arises. Several important inspections were made and detailed reports submitted by the district supervisors of fish culture with regard to the introduction of non-indigenous species, the location of egg-collecting camps and hatchery sites.

Prospecting camps were operated at several points for the purpose of determining the possibilities for collecting eggs for fish cultural purposes, and much data was obtained. Such camps operated last year were continued from the Margaree hatchery in the Pleasant Bay area, Cape Breton island; from the Banff hatchery in Cold lake, Alberta; and at Penask lake, British Columbia. A new camp, which gave promising returns for the initial season, was opened at Lochaber lake, Nova Scotia, in connection with the new hatchery that was established the previous autumn at South River, Antigonish county, Nova Scotia.

A considerable amount of work was carried out in the matter of investigating possible hatchery sites in the Windsor and Sydney areas. A large number of lakes in Nova Scotia were examined with a view to discovering waters suitable for stocking with rainbow trout. This work was chiefly confined to Cape Breton and Yarmouth areas.

Further examinations were made in an endeavour to discover good sites for salmon ponds, taking into consideration the necessity of having such sites in close proximity to an adequate supply of parent salmon and good transportation facilities. Some of these sites were inspected and surveys in this connection were made on the northwest Miramichi river, New Brunswick, Morell river, Prince Edward Island, and Margaree river, Nova Scotia.

One new trout hatchery was constructed this year at Penask lake, British Columbia, as described later in this report.

At the close of 1929 there were thirty main hatcheries, ten subsidiary hatcheries, five salmon retaining ponds and several egg-collecting stations. The output from these establishments during 1929 was as follows:—

HATCHERY OUTPUT, BY PROVINCES, OF EGGS, FRY AND OLDER FISH  
DURING 1929

Nova Scotia—		
Atlantic salmon.....	6,596,855	
Speckled trout.....	5,466,112

(a) Subsidiary hatchery.

(b) All of these were planted from the 1929 Fall collection.

(c) Collecting camp.

(d) 240,000 of these planted from the 1929 Fall collection.

(e) 2,506,000 of these planted from the 1929 Fall collection.

(f) This distribution represents output 1929 resulting from autumn spawners of 1928 and from spring spawners of 1929.

In addition to the above 484,245 Cutthroat trout eyed eggs were purchased from S. Drew, Esq., Troy, Montana, and planted direct, as follows:—Fraser river watershed—

Sumas river..... 25,000

Kanagana creek..... 25,000

Nicomelk river..... 434,245

484,245

NOTE.—Date of establishment is taken as the year during which the first distribution is made.

In addition to the experiments, tests, and investigations, with equipment, methods, food and selective breeding, that are continually under way at the various hatcheries, an extensive program of investigation and research, which is only limited by the difficulty that is experienced in finding properly trained workers to undertake definite problems of a fish cultural nature, is going on under the direction of the Research Committee on Fish Culture of the Biological Board of Canada.

The investigation that has been under way for several years at Cultus Lake hatchery, B.C., under the direction of Dr. R. E. Foerster, of the Biological Board, to determine the relative efficiency of natural reproduction, the planting of eyed eggs, and the distribution of free-swimming fry, was extended to include the production and distribution of fingerling and of yearling sockeye. This investigation when concluded will provide definite data to support or refute the numerous and diversified opinions that exist on this particular question at the present time. Considerable progress has been made in the investigation of various problems relating to fish culture by the Biological Board and its various committees. The nature of these investigations were briefly outlined in the report on fish culture for 1928. During the summer of 1929, the general region of the Gypsum Quarries, drainage from which polluted the water supply of the Windsor hatchery, Nova Scotia, was investigated on four occasions by the director and staff of the Fisheries Experimental Station at Halifax. The acid water was traced back to a stream of under-ground source, coming from the quarry workings. In February, 1929, it was found that the acid condition of the water, which had been absent in the fall of 1928, had returned and was of sufficient strength to kill fish eggs. The superintendents of hatcheries advise the director of the nearest Biological Station of any unusual condition or loss that they are unable to cope with, immediately such makes its appearance, and he arranges for such scientific or pathological investigation as the situation may call for. The department, and the senior fish cultural officer in each division, is at the same time fully advised, in order that prompt action may be taken.

A series of lectures, under the direction of Dr. W. A. Clemens, Director of the Nanaimo Biological Station, was given to superintendents of hatcheries in British Columbia in July, 1929. The lectures were held at the University of British Columbia, which also supplied necessary laboratory material and equipment. The Cultus Lake hatchery, B.C., is given over entirely to sockeye salmon investigations. All the space required, and the material and equipment available at all hatcheries, is at the disposal of the members of the Biological Board.

Arrangements have also been made for the construction of an experimental hatchery in connection with the Atlantic Biological Station at St. Andrews, N.B.

The Canadian National Railway, Canadian Pacific Railway, Dominion Atlantic Railway, Kettle Valley Railway, and the Esquimalt and Nanaimo Railway Companies continued their generous assistance and co-operation by furnishing free transportation for shipments of game fish and game fish eggs with their attendants. The extent of this co-operation is indicated in the following summary:—

Railways	Total mileage on trip passes	Number of passages	Mileage baggage car permit			Number of cases or cans			Number of permits
			Full	Empty	Total	Full	Empty	Total	
C.N.R.....	21,105	181	11,144	10,201	21,345	882	873	1,755	164
C.P.R.....	18,017	100	10,041	9,831	19,872	479	480	959	119
D.A.R.....	412	4	206	206	412	12	17	29	4
K.V.R.....	771	6	546	250	796	9	6	15	7
E. & N.R.....	363	5	212	212	424	17	17	34	6
	40,668	296	22,149	20,700	42,849	1,399	1,393	2,792	300

NOTE.—Number of passages refers to transportation one way. A return trip counts as two passages. Number of permits refers to one-way passage for cases or cans, either by permit, special authority or free transportation without a permit form.

Gratifying reports regarding the results that are apparent from the distribution of hatchery products continued to accumulate from all districts where fish cultural operations are carried on. In many districts local organizations such as boards of trade, angling and protective associations, service clubs, as well as private individuals, have provided transportation and otherwise assisted in distribution work. In a few instances, the necessary facilities were provided and allotments of eggs and fry that were made by the department were hatched, or retained and fed, for several months at the expense of the local organization, but under the general supervision of the nearest fish cultural officer.

Non-indigenous species have been successfully introduced into the waters of several localities, and waters that were previously barren have been made productive by distributions of hatchery output. The rainbow trout that were first introduced into Keefe's or Pisquid lake, P.E.I., continue to furnish good sport. On the opening day, July 1, 1929, almost everyone secured some fish, many of them their limit. Some specimens weighed as high as four pounds. The establishment of rainbow trout in this province, although as yet in a very limited area, affords some splendid angling at a time when the native speckled trout and Atlantic salmon are protected by a close season. Many large brown trout, some of spawning size, are being taken in loch Lomond, New Brunswick, where the first introduction was made in 1921. Rainbow trout are also reported to be now abundant in Clear lake, Charlotte county, New Brunswick. The first introduction was made in 1925, and limited distributions each year, including 1928. This lake is reported to have been barren of game fish before the introduction in question. The following rainbow trout, in addition to others, were taken by the Supervisor of Fish Culture for the district in June, 1929, when investigating conditions:—

One female, twenty inches long, three pounds weight:

One male, twenty and one-half inches long, three and one-quarter pounds weight.

One female, twenty-two inches long, four and one-half pounds weight.

In addition to those taken, many large fish were observed.

Cisco and whitefish, first introduced into the Quill lakes (alkaline) in 1924 and 1926 respectively, are reproducing. The cisco particularly are reported to be increasing rapidly, and during the winter of 1929-30 the commercial catch was approximately eight times as large as during the preceding year.

Brown and Loch Leven trout were also reported to be quite plentiful in various streams in the Cypress Hills district in southwestern Saskatchewan, where they were first introduced in 1924. This region was previously barren of game trout of any kind, but when the waters were thrown open to public angling during the summer of 1929 fine gamey trout, weighing as much as six pounds, were taken.

Equally satisfactory returns are apparent from the limited distribution of rainbow trout, which was made in Battle and Armstrong creeks in 1925. The success of this introduction at first appeared doubtful, but during 1929 rainbow, eighteen and one-half inches in length and weighing three and one-half pounds, were taken in Battle creek and other specimens measuring twenty inches and weighing slightly over four pounds were taken in Armstrong creek. A few years ago there were no game fish of any kind in this region, but the addition of some angling of high order has apparently influenced local interests to establish a summer resort.

Splendid returns were also apparent in 1929 from the Eastern speckled trout that were first distributed in the Medicine-Maligne lakes system in the Jasper park in 1928. This system was investigated and found to be barren of game fish by Dr. C. H. O'Donoghue, who was at that time a member of the Biological Board. Two distributions of speckled trout were made, the first in 1928 and the second in 1929. Mr. A. Bajkov, also an employee of the Biological Board, found that the fish had done extremely well, that some had reached a length of about eighteen inches, and would spawn in 1929, when from sixteen to eighteen months old.

The small-mouthed black bass, first introduced into St. Mary's lake, Salt Spring island, British Columbia, in September, 1920, have greatly increased in numbers and size. In 1929, it was a comparatively easy matter for an angler to obtain his limit catch, several specimens of seven pounds weight being taken.

The Causapscaal Fishing Club generously agreed to the capture of parent salmon for hatchery purposes in their preserves. Operations were carried on under the personal direction of Superintendent Mowat of the Restigouche hatchery. 501,465 eggs were secured, the product from which will be returned to the Restigouche watershed.

The Restigouche Riparian Association placed its power boat and crew at the disposal of the department for collecting parent salmon from the fishing stands and transferring them to the salmon retaining pond at New Mills, New Brunswick.

The Armstrong Independent Fisheries Limited co-operated in making distributions to northern lake Winnipegosis, by providing their tug *Armenon* and part crew—the balance of the crew being drawn from the hatchery employees. After the fry were distributed, the hatchery staff assisted the boat crew to place the channel buoys.

The officials and employees of other federal departments, provincial officers, and officers and crews of fisheries patrol and protection boats, have been most cordial in their co-operation in all instances where they could be of assistance. The Research Committee of the Biological Board gave prompt and courteous consideration to all problems and difficulties that were referred to them. All of this assistance and co-operation is gratefully acknowledged, as is the present of 214,100 eyed salmon trout eggs from the Department of Game and Fisheries for Ontario. These eggs were desired for the purpose of continuing the introduction of the species into Clear lake, Manitoba, and Brightsand lake, Saskatchewan.

The department participated with assortments of hatchery products and fish indigenous to the respective districts, in making exhibits at the fairs or exhibitions held at the following places:—

Nova Scotia Guides' Association, Lake William, N.S.  
Yarmouth, N.S.  
Lunenburg, N.S.  
St. John, N.B.  
Toronto, Ont.  
Boston, Mass.  
Calgary, Alta.  
Hastings Park aquarium, Vancouver, B.C.

From the 1928 collection, exchanges of eyed Atlantic salmon eggs were made with the United States Bureau of Fisheries and the Bureau of Fish Culture, California, details of which are given in a subsequent statement. Similar exchanges of Atlantic salmon eggs from the 1929 collection have been arranged.

As opportunity offered coarse and predaceous fish were destroyed. During September and October the fishery guardian, while rescuing stranded fish in back waters and eddies on Red Deer and Clearwater lakes, Alberta, destroyed 6,000 suckers; 1,000 carp were destroyed in Vasseaux lake, British Columbia, and smaller numbers of coarse fish at other points.

The department is most fortunate in having in its employ a staff of efficient fish cultural officers, who are most conscientious in the discharge of their duties. Several new appointments and the following promotions were made:—

G. Sutherland, from Hatchery Assistant to Superintendent at Antigonish hatchery.

H. V. Gates, transferred and promoted from Superintendent at Middleton, to Superintendent at the Yarmouth hatchery.

#### MARITIME PROVINCES, EASTERN DIVISION

##### *District Supervisor of Fish Culture, James Catt*

The quality of the fingerling output of both salmon and trout exceeded that of any previous year since the appointment of the present supervisor, in spite of the adverse conditions that were brought about by unusual drought with its consequent high-water temperatures that prevailed at many hatcheries. Particularly large fingerlings were produced at the new hatchery at Yarmouth, Nova Scotia. The salmon run to the Miramichi hatchery was large and the collection of eggs consequently much larger than it was the previous year. The run and collection from the Margaree was small. The number of parent salmon secured at the St. John pond was not as large as was expected, probably due to the construction work that was being carried on in St. John harbour. A larger collection was made at River Philip, and prospects at this point are quite promising. The collection of speckled trout in the Pollet's cove and Pleasant bay district was slightly larger than that of last year. A small but satisfactory collection for the initial season was made at Lochaber lake from the Antigonish hatchery. The collection of landlocked or sebago salmon eggs in the Chamcook lakes was slightly smaller than usual but the eggs were of better quality than in previous seasons.

Various experiments in the cross-breeding of Brown trout and Atlantic salmon, selective breeding of trout generally, exhaustion tests of salmon and trout during transportation, feeding experiments with different foods, fed in different rations, were made in this division during the season.

## ANTIGONISH HATCHERY

*Geo. Sutherland, Superintendent*

This establishment was put in operation in the autumn of 1928. The hatchery grounds including the fry ponds were much improved, and the hatchery was operated to capacity in 1929. In March of that year it received 500,000 eyed salmon eggs (River Philip stock) from Bedford, and 250,000 (Morell river stock) from Kelly's pond. In January, 1929, it received an allotment of 483,000 eyed speckled trout eggs which were purchased from the Brook Trout Company of Penn Forest, Mauch Chunk, Pennsylvania, and 930,930 from Paradise Brook Trout Company, Cresco, Pennsylvania. It also received 10,000 such eggs, local hatchery stock, from Saint John in March. In November, 1929, it received 1,490,300 Atlantic salmon eggs from River Philip, N.S., egg collecting camp. 991,400 eyed speckled trout eggs were purchased from the American Fish Culture Company, Carolina, R.I. 50,571 speckled trout eggs were produced from the 1½-year-old trout in the hatchery ponds, and a small but satisfactory collection was made by the hatchery staff in Lochaber lake, Antigonish county, the first occasion on which speckled trout eggs had been collected from wild stock in the Antigonish district. A trap was operated in the inlet of the lake which took 367 fish between October 20th and November 28. The catch included 202 females, which yielded 264,100 eggs. The number and quality of the eggs secured in this initial season warrants a continuance of operations in 1930. Total distributions for the year 1929 resulting from the eggs collected in the autumn of 1928 supplemented by others received during the winter and spring of 1929 amounted to 1,035,780 Atlantic salmon and 1,054,055 speckled trout.

## BEDFORD HATCHERY

*George Heatley, Superintendent*

The quota of 1,642,390 Atlantic salmon eggs for this establishment was secured from the recently opened egg-collecting camp at River Philip. In January, 1929, 473,170 speckled trout eggs, purchased from the Brook Trout Company of Penn Forest, Mauch Chunk, Pennsylvania, and 697,310 purchased from the Paradise Brook Trout Company, Cresco, Pennsylvania, were laid down in this establishment. The fry and fingerlings that resulted from these eggs were distributed during the season of 1929. In December of the same year 1,052,175 speckled trout eggs, purchased from the American Fish Culture Company, Carolina, Rhode Island, were received. The fry from this allotment will be distributed in 1930. In March, 1929, Bedford shipped to Antigonish 500,000 eyed Atlantic salmon eggs. Bedford distributions from 1928 collections and eggs received early in 1929 amounted to 1,161,500 Atlantic salmon and 1,377,230 speckled trout.

A unit of three cement rearing ponds was built at the south side of the area where the wooden rearing troughs are now located. Dimensions are as follow:—

One pond—length 29 feet over all, width 4 feet; one pond—length 31 feet 6 inches over all, width 4 feet; one pond—length 34 feet 6 inches over all, width 4 feet. The depth of each is 14 inches at upper end sloping to 15 inches with well at outlet.

Salmon eggs and trout fry, as required, were supplied by this hatchery to Dalhousie University and the Biological Station at Halifax.

## MARGAREE HATCHERY

*L. J. Burton, Superintendent*

The total output of the Margaree salmon retaining pond, viz., 1,998,534 eggs, was laid down in this establishment. The hatchery ponds produced

106,855 speckled trout eggs and 166,417 were collected from wild fish at Polletts cove, Pond river and Red river, in the Pleasant bay district. In March, 1929, Margaree shipped to the Lindloff sub-hatchery 300,000 eyed Atlantic salmon eggs. From the autumn collections of 1928 Margaree in 1929 distributed 1,955,000 Atlantic salmon and 189,822 speckled trout.

#### LINDLOFF HATCHERY

*M. Kyte, Officer in Charge*

The Lindloff hatchery, subsidiary to Margaree, was operated in the usual manner, and received its supply of 300,000 eyed Atlantic salmon eggs, from the Margaree hatchery. From this number 297,600 were hatched and distributed into local waters.

#### MARGAREE SALMON RETAINING POND

*J. P. Chiasson, Superintendent*

The parent salmon were purchased from twenty of the local fishermen, who have pooled their interests and who operate one large trap suitable for taking parent fish for hatchery purposes, instead of twenty small individual nets. The first salmon were placed in the pond on September 15, and the total catch between that date and November 8 amounted to only 290 fish. Stripping operations extended from November 11 to December 2, a total of 1,998,534 Atlantic salmon eggs being secured, all of which were laid down in the Margaree hatchery for incubation.

#### MIDDLETON HATCHERY

*F. M. Millett, Superintendent*

This establishment handles Atlantic salmon and speckled trout, but makes no independent collection. Its allotment of 1,953,700 Atlantic salmon eggs was received in October and November from the Miramichi pond, and in January 1,653,635 speckled trout eggs were received from the Paradise Brook Trout Company of Cresco, Pennsylvania. The output from this speckled trout allotment was distributed during 1929. In December of the same year 1,143,544 speckled trout eggs were received from the American Fish Culture Company, Carolina, Rhode Island. The resultant fry will be distributed in 1930. In February, 1929, Middleton shipped Windsor 4,000 Atlantic salmon and 6,700 speckled trout eggs to test out the water at that establishment. Middleton distributed 1,007,000 Atlantic salmon and 1,367,530 speckled trout from eggs received in the autumn of 1928, and January, 1929, respectively.

#### RIVER PHILIP EGG COLLECTING CAMP

*George Heatley and George Sutherland, Officers in Charge*

The collection of Atlantic salmon eggs in River Philip amounted to 3,132,690, an increase of nearly 700,000 over the initial season of 1928. The first fish were secured on October 14, and operations were continued until November 16, with a total catch of 846 salmon. Stripping operations covered the period from October 28 to November 19. The eggs secured were divided between Bedford and Antigonish hatcheries as follow: Bedford. 1,642,390; Antigonish, 1,490,300.

## WINDSOR HATCHERY

*F. M. Millett, Superintendent*

The Windsor hatchery was not in active operation because its water supply was made absolutely unsuitable through drainage from Gypsum quarries of the district. As the water supply appeared to have improved in quality, a small number of speckled trout and salmon eggs were laid in the troughs. The hoped for improvement in the water had not taken place and the eggs in question were soon a total loss.

## YARMOUTH HATCHERY

*H. V. Gates, Superintendent*

The new salmon and trout hatchery, which was opened at Lake George in Yarmouth county in the autumn of 1928, was operated to capacity. The grounds and surroundings were generally improved, and in view of the satisfactory results obtained in the original unit, a second unit of seven ponds, each 150 feet long, 4 feet wide and 2 feet 6 inches deep, each subdivided into five shorter ponds, 30 feet long, were constructed in the autumn of 1929. As this hatchery was only opened in the late autumn of 1928 no local collection of eggs was undertaken, but the following allotments of eyed Atlantic salmon eggs were laid down in March, 1929:—

From St. John.....	500,000
“ Grand Falls.....	500,000
“ Florenceville.....	250,000

Four hundred and eighty thousand nine hundred speckled trout eggs, purchased from the Brook Trout Company, and 1,050,000 purchased from the Paradise Brook Trout Company, were laid down in January, with a small allotment, viz., 10,000, from domesticated St. John stock.

An effort was also made to purchase Atlantic salmon for hatchery purposes from the herring traps that are operated off Port Maitland, Yarmouth county. Allen's lake was fitted up as a retaining pond. The season was well advanced when the necessary arrangements had been completed, and a total of only forty-eight fish was obtained from the traps and placed in the retaining enclosure. While the return in eggs was limited, the results warrant a resumption of operations on a larger scale during the coming season.

An exhibit of salmon and trout fingerlings, produced at this establishment in 1929 was displayed during the annual tournament of the Nova Scotia Guides' Association, which was held at Lake William. The fish were retained in enclosures in the outlet of the lake at the entrance to Lake William park, where the tournament was held.

Atlantic salmon and trout, the product of this establishment also formed a part of the Fisheries exhibit that was made at the Lunenburg Fair and Yarmouth Exhibitions. All exhibits created much interest and favourable comment.

In the autumn of 1929, 1,998,356 Atlantic salmon eggs from the Miramichi pond, and 74,500 from Allens lake, Nova Scotia, were received. In December 1,090,000 eyed speckled trout eggs, purchased from the American Fish Culture Company, Carolina, Rhode Island, were laid down in this hatchery. Small numbers of speckled, brown, Loch Leven and hybrid trout eggs were obtained from the fish in the hatchery ponds. These numbers respectively were 4,100, 2,050, 1,105 and 2,050. The ponds in question gave good results, and a large number of healthy, vigorous fingerlings of more than average size were produced. The distribution from Atlantic salmon eggs received during March of 1929 amounted to 1,139,975, and from speckled trout eggs received during December, 1928, and early 1929, was 1,477,475.

## FLORENCEVILLE HATCHERY

*K. G. Shillington, Superintendent*

The Florenceville hatchery, which was put in operation in 1928, is now functioning to the full capacity of existing facilities. It received 2,135,500 Atlantic salmon eggs from the St. John pond in October, 1929. Five hundred and sixty-eight thousand six hundred and thirty-one speckled trout eggs were obtained from the hatchery ponds that year. This collection was supplemented by 475,020 eyed speckled trout eggs, which were purchased from Brook Trout Company of Penn Forest, Pennsylvania, in January, and 494,750 from the American Fish Culture Company of Carolina, R.I., in December, 1929. Outgoing shipments in March, 1929, were as follow: to Miramichi hatchery 500,000 Atlantic salmon eggs; to Yarmouth hatchery 250,000 Atlantic salmon eggs.

The hatchery premises were generally improved. A new coal and storage room, 18 feet by 16 feet was built. The food room and refrigerator or cold storage room were enlarged, and a separate drain pipe laid therefrom to the brook. Tie rods were embedded in the cement in the tops of the walls of the six retaining ponds; the damaged wall between retaining ponds seven and eight was broken up and removed, making one larger pond out of what had previously been two; a new earthen pond was excavated in a natural hollow at the front of the hatchery property, and the small earthen pond that was excavated in 1928 was deepened and enlarged. Distributions made in 1929 from eggs received in 1928, supplemented by trout eggs received in January, 1929, amounted to 1,516,624 Atlantic salmon and 740,002 speckled trout.

## GRAND FALLS HATCHERY

*W. A. McCluskey, Superintendent*

No independent collections of eggs were undertaken by the staff of this establishment, which received its allotments from other sources. In January and February, 1929, 879,420 speckled trout eggs were received from the Paradise Brook Trout Company, Cresco, Pennsylvania. In the autumn of the same year, 3,078,600 green Atlantic salmon eggs were received from the St. John pond, and 988,800 speckled trout eggs from the American Fish Culture Company, Carolina, Rhode Island. Grand Falls in March shipped to Yarmouth hatchery 500,000 Atlantic salmon eyed eggs, and in April to Tobique hatchery 500,000 of the same species.

The hatchery and dwelling house were generally repaired, both buildings were shingled and painted, the water-pipe line to the dwelling house was relaid, and other minor repairs were made. From the autumn collection of 1928 and from trout eggs received early in 1929, Grand Falls hatchery distributed 2,026,287 Atlantic salmon and 797,574 speckled trout.

## TOBIQUE HATCHERY

*J. M. Butler, Officer in Charge*

Tobique hatchery, which is subsidiary to Grand Falls, and is utilized to facilitate the distribution of Atlantic salmon in that stream, received 500,000 eyed eggs of that species in April from Grand Falls, which resulted in a distribution of 488,000 salmon fry.

A new water-supply dam was built, seventy-five feet above the old dam, which should insure a larger and more reliable water supply.

## MARINE AND FISHERIES

## MIRAMICHI SALMON POND

*Frank Burgess, Superintendent*

The Superintendent of the Miramichi hatchery is responsible for the operation of both the Miramichi hatchery and the Miramichi salmon retaining pond. The parent salmon for the pond are purchased by tender and contract from the late summer and early autumn runs, which usually occur in large numbers in the Miramichi and its tributaries. No difficulty was experienced in securing all the parent fish required, as is indicated by the catch and delivery of 3,454 salmon taken in two nets operated by the successful tenderer between September 11 and October 7. Stripping operations extended from October 17 to November 15. A total of 14,410,663 salmon eggs were obtained. The contractor's nets were not fished continuously during the above mentioned period, and did not operate from September 27 to October 3 on account of low water conditions, particularly in the pond in which the salmon were impounded. The salmon impounded were actually taken in seventeen days' fishing. The eggs secured from Miramichi pond were allotted as follow:—

Middleton hatchery.....	1,953,700
Yarmouth hatchery.....	1,998,356
Miramichi hatchery.....	10,458,607
	<hr/> 14,410,663

## MIRAMICHI HATCHERY

*Frank Burgess, Superintendent*

In addition to the eggs held over from the 1928 fall collection, Miramichi received 500,000 Atlantic salmon eggs from Florenceville in March, 1929. The distribution of fingerlings from the Miramichi hatchery during 1929 amounted to 4,175,089 Atlantic salmon, and 96,474 speckled trout. The latter were hatched from 100,395 eggs secured from the Paradise Brook Trout Company. On account of exchange agreements the following outgoing shipments of Atlantic salmon eyed eggs were made: To United States Bureau of Fisheries, Craig Brook hatchery, East Orland, Maine, 1,000,000; to Bureau of Fish Culture, Port Seward hatchery, California, 28,000 eggs. Both allotments of salmon eggs reached their destinations in uniformly splendid condition. From the Miramichi salmon pond 10,458,607 salmon eggs were received during the autumn of 1929.

General repairs were effected, including the construction of a store-house and ice-house combined, the addition of one bedroom and the installation of sanitary fittings in the dwelling.

The Supervisor of Fisheries for the district reports that he saw a salmon caught at the mouth of Cains river, a tributary of the Miramichi, on the evening of May 23, 1929, weighing about eighteen pounds, which was in a spawning condition; that when the fish was held up it extruded eggs which were as large as field peas. This is the first Atlantic salmon in a spawning condition during the spring months that has been brought to the attention of this department.

## NEW MILLS POND

*Wm. White, Superintendent*

The salmon for the New Mills Pond are purchased from commercial fishermen of the vicinity. Most of the fish impounded are obtained from the early spring run. In 1929, out of a total of 420 fish, 253 were secured by June 30, and the balance, 167, were taken between that date and July 15. Spawning operations extended from October 22 to November 6. A total of 1,635,300 salmon eggs were secured, all of which were laid down in the Restigouche hatchery.

## RESTIGOUCHE (FLATLANDS) HATCHERY

*W. A. Mowat, Superintendent*

Fly fishing was reported as not being up to the average of recent years during the early part of the season on the Restigouche and its tributaries, but later in July fish became more plentiful and good angling was experienced. The Matamajaw Salmon Club, which controls a portion of the Matapedia river, very kindly agreed to the department securing parent salmon in its waters. The operations were under the personal direction of the superintendent of the Restigouche hatchery. The first fish were secured on September 16, and a total of 154 were taken between that date and October 25. Spawning operations covered the period between October 20 and 29, a total of 501,465 salmon eggs being secured, all of which were laid down in the Restigouche hatchery. The total production of the New Mills pond, viz., 1,635,300, and 264,345 speckled trout eggs were also handled at this hatchery. These latter eggs were purchased from Paradise Brook Trout Company, Cresco, Pennsylvania. In April, 1929, Restigouche forwarded to Nipisiquit sub-hatchery 401,192 eyed Atlantic salmon eggs. Distributions made from Restigouche in 1929 amounted to 1,477,854 Atlantic salmon and 156,725 speckled trout.

## NIPISQUIT HATCHERY

*J. T. Comeau, Officer in Charge*

The Nipisiquit hatchery is subsidiary of the Restigouche establishment. It received its allotment of 401,192 salmon eggs from Restigouche, which resulted in a distribution of 380,284 fry.

## ST. JOHN HATCHERY

*J. D. Nichol, Superintendent*

The St. John hatchery has a larger and more extensive system of ponds than any other hatchery operated by the department, and handles a greater variety of fish, including Atlantic salmon, landlocked or sebago salmon, brown, Loch Leven, rainbow and speckled trout. Numerous experiments in selective breeding, cross breeding, feeding, etc., are carried on at this establishment, which also supplies the St. Andrews Biological Station with eggs and fry for experimental purposes.

This hatchery can supply its own requirements of trout eggs of the various kinds, and is the only one in the Eastern Division that produces eggs in quantity of species other than speckled trout from domesticated brood stock. It also acts as a clearing house for most of the shipments of eggs that are made to the Maritime Provinces. From purchased speckled trout eggs coming from firms in the United States, St. John retained the following numbers as test allotments: During January from Brook Trout Company, 26,320, and from Paradise Brook Trout Company, 38,480; during December from American Fish Culture Company, 46,680. During the calendar year 1929 the following collections were made from domesticated stock:—

Rainbow trout.....	49,445
Brown trout.....	251,986
Loch Leven trout.....	46,592
Hybrid trout.....	44,581
Speckled trout.....	1,183,402

Specimens representative of the production of this hatchery were exhibited at the Toronto Exhibition, the Lunenburg Fair, and the Yarmouth Fair.

Eighty-four thousand landlocked or sebago salmon eggs, collected in the Chamecook lakes by Assistant Butler, of Bedford, and Assistant Heatley, of Middleton, were laid down for incubation in St. John hatchery during the autumn of 1929. Its quota of Atlantic salmon eggs, 1,054,200, were secured from St. John salmon pond.

Outgoing shipments of eggs from St. John hatchery in March were: To Yarmouth, 500,000 Atlantic salmon and 10,000 speckled trout; to Antigonish, 10,000 speckled trout; and in May to Kelly's pond hatchery, 18,792 rainbow trout.

General repairs were effected, including repairing of the ponds where necessary, the construction of four ponds (each 175 feet long, 4 feet wide, and 2 feet 6 inches deep), repair and painting of the dwelling, etc.

Distributions for the year were: Atlantic salmon, 433,866; brown trout, 101,423; landlocked or sebago salmon, 94,713; Loch Leven trout, 40,398; rainbow trout, 318; and speckled trout, 668,275.

#### ST. JOHN SALMON RETAINING POND

*J. D. Nichol and K. G. Shillington in charge*

J. D. Nichol is responsible for the operation of this establishment during the greater part of the season, but on account of the volume and importance of the operations at the St. John hatchery, Mr. Shillington was in charge and responsible for stripping operations at the salmon pond. The parent fish are purchased from the early run commercial catch. A total of 980 were secured from this source between June 4 and August 20. Stripping operations covered the period between October 26 and November 8. A total of 6,268,300 salmon eggs were secured, which were allotted as follows: Florenceville, 2,135,500; Grand Falls, 3,078,600; and St. John, 1,054,200.

The run of salmon to the St. John harbour during the season was below the average, and the catches of the commercial fishermen were correspondingly small. A possible reason for the decrease in the catch of the harbour nets may be due to the new harbour development. The stretch of water known as Butter-milk channel, between Navy island and the mainland, was almost completely closed by a coffer dam, and the catch of the two weirs in this channel was almost a failure. The coffer dam also affected the currents, making it very difficult for the fishermen to maintain their weirs on the north side of the island.

A temporary pipe line was extended from the St. John water supply to the pond, thus assuring fresh water at all times for washing the fish and washing and fertilizing the eggs.

#### KELLY'S POND HATCHERY

*F. C. Hayley, Superintendent*

Collections of Atlantic salmon, speckled trout, and rainbow trout eggs were made from this hatchery. The salmon eggs were collected in the Morell river, where the parent fish were captured by means of a trap-net between October 18 and November 23. Two hundred and fifty-seven fish were secured in this way, which yielded 833,800 salmon eggs. Spawning extended from October 26 to November 29. The run of salmon in the Morell river was smaller than usual, principally on account of low water conditions. Two hundred and nine salmon entered the trap and the balance of 48 were captured on the spawning grounds. The total number caught is not, however, considered a fair criterion of the number in the river, as there are several miles of suitable spawning grounds below the location of the trap-net, and during a low water season when there are no freshets, a large percentage of the salmon remain in the lower reaches and do not ascend to the point where the trap is located. While the equipment is

supplied by the department and the work is under the direction and supervision of hatchery officers, the fish are actually caught and guarded, until they are stripped and liberated, at the rate of \$1 each.

Forty-six thousand and seventy-nine speckled trout eggs were collected in the hatchery water supply pond, and 305,898 were purchased from the owners or lessees of private ponds at the rate of \$1 per thousand for eyed eggs. The equipment is furnished by the Department, the parent fish are captured by the owners or lessees of the ponds, the fish are stripped and liberated by hatchery employees, and the owners or lessees are paid at the rate mentioned for eggs that reach the eyed stage.

In 1929 speckled trout eggs were secured on this basis from Blooming Point, Essory's, Gillan's, Ing's McKinnon's and Watt's ponds and from the Morell river.

The local collections of speckled trout eggs were augmented by an allotment of 490,300, which were purchased in December from the American Fish Culture Company of Carolina, Rhode Island; 550,260 such eggs were also received from the Paradise Brook Trout Company, Cresco, Pa., in February, 1929.

Twenty-six thousand five hundred and thirty-five rainbow trout eggs were collected in Pisquid or Keefe's lake, which received its first allotment of such fry in 1925, and which, previous to this date, contained no rainbow trout. The rainbow trout collection was augmented by a small shipment of 18,792 from the St. John hatchery ponds. In March Kelly's pond hatchery shipped to Antigonish 250,000 eyed Atlantic salmon eggs.

The distribution from this hatchery in 1929 was 1,015,853, made up as follows: 308,127 Atlantic salmon, 682,354 speckled trout, and 25,372 rainbow trout fry and fingerlings. A new water supply dam was constructed and a new pipe line laid, buildings were repaired and painted, a bathroom and sanitary fittings were installed in the Superintendent's dwelling, and a portable stripping shed was built at the Morell river collecting camp.

#### PRAIRIE PROVINCES—CENTRAL DIVISION

##### *District Supervisor of Fish Culture, S. J. Walker*

Test fishing for the purpose of determining the numbers of eggs available under average conditions for fish cultural purposes were carried on at Cold and Whitefish lakes in northern Alberta, at Cameron lake in southern Alberta, at McIntosh creek, Cochin, northern Saskatchewan, and at Pigeon bay, lake Winnipeg. A new hatchery built in 1928 at Swan Creek, lake Manitoba, for the propagation of pickerel, was put into operation in the spring of 1929. A series of rearing ponds were also constructed late in the season at the Waterton Lakes hatchery and will be available for use in 1930.

Details of the operations for 1929 at each of the several establishments are given in subsequent statements.

#### GULL HARBOUR HATCHERY, LAKE WINNIPEG

##### *C. P. Paulson, Superintendent*

The greater part of the whitefish fry was distributed by a scow and motor boat in the southerly portion of lake Winnipeg, but over 18,000,000 eggs were placed in the hatching battery on the C.G.S. *Bradbury* and taken to the Berens River district. The resultant fry were distributed, as they hatched, over a wide area. Total distributions for the year were: 5,395,000 pickerel and 74,500,000 whitefish.

The 1929 supply of whitefish eggs was collected in a pound-net operated by the hatchery staff at the mouth of the Little Saskatchewan or Dauphin river. The leads of this net, which close the river, were raised from 6 o'clock Saturday evening until 6 o'clock on the Sunday evening following throughout operations. The net was in commission on September 21 and was removed from the river on November 1.

Low water conditions were experienced, with very little current in the river, which was probably the reason for the run not being more pronounced. A total of 11,558 fish was taken, of which only 3,006 females were stripped. A total collection of 75,150,000 whitefish eggs was made, all of which were laid down in the Gull Harbour hatchery.

Experimental fishing, with a view to locating other sources of supply of whitefish eggs than the Little Saskatchewan or Dauphin river, was carried on in Pigeon bay. This experimental fishing was in charge of Assistant P. E. Geary of the Gull Harbour hatchery. The tests in question were made at different points with gill-nets, but the catch throughout was light, and there did not appear to be any definite run of whitefish into the bay.

Conditions and facilities for retaining the small number of fish that were caught were also poor, and the results altogether were not promising from the standpoint of egg collection—a total of 511 fish only, of which 104 females were stripped, yielding 1,800,000 whitefish eggs. These eggs were planted in a green stage in Pigeon bay.

A collection of pickerel eggs was undertaken from the hatchery at the quarry. Owing to the lateness of the season, ice prevented the setting of the nets until May 24, when the greater part of the run had passed. Seven hundred and six fish in all were taken at this point, which yielded 7,650,000 pickerel eggs.

Experimental fishing, with a view to locating more productive sources of supply for pickerel eggs, was carried on at Leaf river and Pigeon bay. These operations were also under the direction of Assistant Geary. Mr. Geary, with his crew, left the Gull Harbour hatchery on April 8, proceeding via Selkirk, Winnipeg and Gypsumville by rail, thence by team to the mouth of the Dauphin river. The roads at this time were almost impassable, and on arrival at the mouth of Dauphin river, the lake was unfit for travel by dog team. Conditions, however, improved and crossing of the lake to the east shore was undertaken on April 25. Conditions throughout were generally unfavourable and much inconvenience was caused by floating ice. As soon as the ice moved from the shore of the lake, operations were transferred to Pigeon bay. Operations were not promising from the standpoint of egg collection, as a total of only 391 pickerel was caught, 244 at Leaf river and 147 at Pigeon bay. These fish were liberated unstripped.

The hatchery buildings were generally repaired, and the U-shaped battery was replaced with two single type batteries with new floor tanks.

#### SWAN CREEK HATCHERY, LAKE MANITOBA

*George E. Butler, Superintendent*

The pickerel hatchery which was constructed in 1928 at Swan Creek, lake Manitoba, was equipped and put in operation in the spring of 1929. The hoped-for run of parent fish was more than realized and between April 28 and May 16, 44,114 and 4,561 pickerel were taken respectively in the two nets that were operated; 6,270 female fish were liberated before any stripping commenced, but 5,370 were stripped; 253,810,000 pickerel eggs were obtained; 169,830,000 of these were laid down in Swan Creek hatchery, and the balance, 83,980,000, planted out in Swan and Marshy Point creeks. At the close of operations, 41,366 unstripped fish were liberated. Some difficulty was experienced with dirty water which caused considerable loss; 139,980,000 eggs and fry were distributed.

## WINNIPEGOSIS HATCHERY

*George E. Butler, Superintendent*

Three pound-nets were set on the usual grounds at the entrance to Waterhen river and a total of 9,039 whitefish were taken. The first crate boat load of whitefish transferred to the lagoon at the hatchery did not do well, as the water was very shallow. The balance of the catch was therefore retained at the Waterhen camp and was only removed to the lagoon after the fish had begun to spawn.

Weather conditions were generally favourable throughout the collecting season, and a total of 106,315,000 whitefish eggs was secured, of which 20,000,000 were taken to the Fort Qu'Appelle hatchery by Superintendent Mapes, who was assisting with the operations on lake Winnipegosis, and the balance, 86,315,000 eggs, was laid down in Winnipegosis hatchery.

Through the courtesy of the Department of Game and Fisheries for Ontario, 115,500 salmon trout eggs were laid down on March 2 in splendid condition, and the resultant fry were distributed in Clear lake in the Riding mountains. Distributions for the year amounted to 109,500 salmon trout and 66,500,000 whitefish.

The motor boats, including the gasoline engines, were overhauled and repaired. A portion of the lagoon at the hatchery was dredged and deepened by the Department of Public Works, the material removed being utilized for levelling and improving the hatchery surroundings.

## FORT QU'APPELLE HATCHERY

*W. C. Mapes, Superintendent*

The total distribution of all species from the Fort Qu'Appelle hatchery in 1929 was 48,622,442 by species as follows: Loch Leven trout, 133,714; pickerel, 30,002,500; salmon trout, 91,228, and whitefish, 18,395,000. In addition to the hatchery fry disposed of seven waters were stocked by the hatchery staff by transfer of fish from other waters. A new location at Arnold's point was selected for the collection of pickerel eggs where 11,690,000 eggs were obtained between May 3 and May 16. Ninety-eight thousand six hundred salmon trout eggs generously donated by the Department of Game and Fisheries for Ontario were received in March from the Port Arthur hatchery. The resulting fry were all distributed in Brightsand lake with a view to establishing the species in that district. Thirty-one thousand and 103,000 brown trout eggs were received respectively from Trout Brook Company, Hudson, and Cedar Island Lodge, Brule, Wisconsin. The resultant fry will be distributed in the streams in the height of Cypress Hills district where previous introductions have done exceedingly well. No collection of whitefish eggs was undertaken in the Fort Qu'Appelle district. The superintendent assisted in similar operations from the Winnipegosis hatchery from which source 20,000,000 eggs were received. Twenty-one million three hundred and sixty-two thousand whitefish eggs and 43,010,000 pickerel eggs received from experimental fishing in McIntosh creek between Jackfish and Murray lakes at Cochin, Saskatchewan, were laid down in this establishment. Fort Qu'Appelle forwarded to Summerland 5,000,000 eyed whitefish eggs and to Banff 1,360,000 pickerel eyed eggs.

## COCHIN EGG COLLECTING STATION

*O. Bright, Officer in Charge*

Experimental fishing was continued under the direction of Assistant O. Bright, of the Fort Qu'Appelle hatchery, in the creek between Jackfish and Murray lakes at Cochin in the spring and autumn of 1929 with a view to ascer-

taining the numbers of pickerel and whitefish eggs that are obtainable under normal conditions at this point for hatchery purposes. The results far exceeded those obtained in any other year. Seven thousand eight hundred and sixty pickerel were caught and impounded between April 15 and May 15. Sixty-seven million sixty-five thousand pickerel eggs were taken, of which 43,010,000 were transferred to the Fort Qu'Appelle hatchery and 24,055,000 were planted in Murray lake. One thousand eight hundred and six females were stripped and 560 were liberated, in good condition, without having been stripped. Had it been desired, a considerably larger collection could have been made. Similar operations were conducted in the autumn and 25,357 whitefish were caught and impounded between September 21 and November 30. Five thousand six hundred and twelve of this number were stripped and 63,687,000 whitefish eggs secured; 21,362,000 of this number were laid down in Fort Qu'Appelle hatchery and the balance, 42,325,000 planted out in Cochin creek. The balance of the fish in the retainers were liberated, it having been demonstrated that conditions were favourable in so far as numbers and facilities for handling the fish were concerned. The whitefish of Jackfish and Murray lakes are late spawners. The first whitefish eggs in 1929 were obtained on November 18 and the last on December 4. On the latter date, quite a number of the fish liberated were not ripe. Reports of early spawning whitefish in Chitek lake about sixty miles to the northward were investigated and found to be correct. On October 13, twelve whitefish of large size were secured, the largest weighing eight and one-quarter pounds, and the smallest four and three-quarter pounds with an average weight for the lot of six and three-quarter pounds each. Of this number, seven were males and were spawning freely. Of the five females, three were spawning freely. One had spawned out and one was quite ripe. Chitek lake is the only body of water in this district of which the department is aware in which the early spawning of whitefish takes place.

#### BANFF HATCHERY

*J. E. Martin, Superintendent*

The Banff hatchery covers an extensive area and handles pickerel, rainbow, cutthroat, brown and Loch Leven trout. The greater portion of the eggs are obtained by purchase or exchange. In 1929 the following eggs were secured:—

Pickrel.....	1,360,000 from Fort Qu'Appelle.
Rainbow.....	751,200 from Troy, Montana.
Cutthroat.....	1,088,000 from Butte, Montana.
Loch Leven.....	288,217 from Pozeman, Montana.
Brown trout.....	210,830 from Brule, Wisconsin.

Initial distributions of Loch Leven were made in Road creek, tributary to Little Red Deer river and in several tributaries of the James river within the forest reserve. Two hundred and forty thousand cutthroat trout eggs were planted in the lakes in the Bear Creek valley which lies to the north-west of lake Louise but on the other side of the divide which drains to the North Saskatchewan river. The pass is 6,860 feet high and is connected with lake Louise station by a pony trail. It is twenty-eight miles from the station to the summit of the pass. Near the mouth of Bear creek is a waterfall which has proved to be a barrier against any fish ascending to the waters above. The lakes in question were, therefore, devoid of fish life. The distance was too great and transportation facilities too primitive to attempt to stock with fry. Consequently eggs were planted in the gravel in Silver Horn creek where the most suitable conditions were found. The eggs were carried as far as feasible by pack horse but the final stages had to be negotiated on foot over extremely rough country. A small number of salmon trout eggs, viz., 9,500, were secured

from the fish that are held for exhibition purposes in the hatchery pond, and a further number, viz., 44,540, from Cold lake in northern Alberta. A shallow pond, approximately one-quarter of an acre in area, was excavated in what had previously been a sulphur slough. The sulphur water seepage has been diverted and the pond is being utilized for experimental fish rearing purposes. Loch Leven fingerlings were supplied the Forestry Service for the annual exhibit that it makes at the Calgary Exhibition. Fifty thousand rainbow eyed eggs were supplied to Jasper hatchery in May. Two million, seven hundred and twenty-seven thousand eight hundred fish of all species were distributed from the Banff hatchery in 1929 by species as follow: Brown trout, 43,800; cutthroat trout, 1,042,000; Loch Leven trout, 332,000; pickerel, 670,000; rainbow trout, 591,000; and salmon trout, 49,000.

#### SPRAY LAKES HATCHERY

*J. E. Martin, Superintendent*

Spray Lakes hatchery is subsidiary to Banff and is carried on under its direction. Two trap-nets are operated, one at the head of the chain of lakes and the other in the creek connecting the first and second lake. A late season with low water was experienced with some interference to the nets when the freshets occurred. The collection, however, was better than that of last year, amounting to 505,105 cutthroat trout eggs from which 322,920 eggs and fry were planted out.

#### COLD LAKE EGG COLLECTING STATION

*J. E. Martin, Superintendent*

Test fishing was continued in Cold lake northeast of Edmonton under the direction of Superintendent Martin of the Banff hatchery with a view to determining the numbers of salmon trout eggs that might be expected in this lake under average conditions. There was a good showing of parent fish at each of the points selected, viz., French bay and Murray island, but, owing to unfortunate delays, the equipment was not in place sufficiently early to intercept the main movement of spawning fish. No eggs were taken at French bay, but 66,475 were secured at Murray island. All of these eggs, except for some lost during retention, were shipped to Banff hatchery.

#### JASPER SUB-HATCHERY

In January, 1929, 251,664 speckled trout eggs from Paradise Brook Trout Company were laid down in Jasper hatchery; 208,786 of these were distributed into the Medicine-Maligne Lake system of Jasper park. This distribution constitutes the second introduction of the species to the system. This subsidiary hatchery was fitted up particularly for the introduction of the species to this system which was previously barren of fish life. The eastern speckled trout have done extremely well in their new environment as specimens were observed eighteen inches in length and in a spawning condition in the summer of 1929 when they were only sixteen months old. In view of the splendid returns that are in evidence, further introductions do not appear to be necessary at the present time. Fifty thousand rainbow trout eggs from the Banff hatchery, as well as the speckled trout eggs mentioned above, were cared for by the Parks Branch at this hatchery under the general direction of the Supervisor of Fisheries for Alberta. The rainbow fry, 45,387 in number, were distributed by Assistant Bright of the Fort Qu'Appelle hatchery, the necessary assistance, including trucks, pack horses, etc., being provided by the Parks Branch, Department of the Interior.

## LESSER SLAVE LAKE (CANYON CREEK) HATCHERY

*H. J. Reid, Superintendent*

A satisfactory collection of pickerel eggs (58,125,000) was obtained, when it is considered that this is the first attempt in this direction in the Lesser Slave Lake district. The collection was made in Buffalo bay at the westerly end of the lake, parent fish being taken in trap and hoop-nets. Considerable difficulty was experienced on account of varying water levels and floating debris. An equally satisfactory collection of whitefish eggs was made in the autumn. Forty-three million two hundred and seventy-eight thousand were secured from fish taken in pound-nets in Lesser Slave lake, 48,895,000 in Whitefish river, and 18,380,000 in Mink creek. Transportation of eggs from the last mentioned camps presents some difficulty as it involves carriage by truck and wagon over indifferent and poor roads, a distance of fifty-seven miles to Enilda railway station. Drift ice also interfered with operations in Lesser Slave lake, necessitating the removal of pound-nets early in November. The total collection of whitefish eggs was increased to 110,553,000 as against 18,500,000 in 1928. The hatchery property was further improved, fenced and the plant and equipment put in first-class condition. Distributions for the year amounted to 19,150,000 pickerel and 10,355,000 whitefish.

## WATERTON LAKES HATCHERY

*G. E. Bailey, Superintendent*

The new hatchery which was placed in operation in 1928, in the Waterton Lakes park, southern Alberta, this year distributed a total of 1,444,715 fry and fingerlings made up of 871,265 cutthroat and 573,450 rainbow trout. Most of the eggs were secured from outside sources, viz., 692,930 rainbow eggs (purchased from Troy, Montana); 504,000 cutthroat eggs (purchased from the same source); and 500,180 cutthroat eggs (exchange with the United States Bureau of Fisheries from Yellowstone park). Test fishing for the purpose of determining the quantities of eggs that might be procured locally was also carried on and nets were operated in Cameron creek, Cottonwood creek, the Dardanelles and in Cameron lake. With the exception of Cameron lake, these operations were not successful. The Cameron creek net was repeatedly carried out by freshets and floating debris. Similar conditions were experienced in Pass creek. The nets at the Dardanelles were also flooded, the water rising fourteen feet on one occasion. The operations at Cameron lake were more encouraging where 34,040 rainbow trout eggs were obtained. A combination icehouse and garage, a dam in the creek, one hundred and sixty feet of flume and five earthen ponds, each 50 feet long and six feet wide were constructed, and the grounds generally were much improved.

## BRITISH COLUMBIA—WESTERN DIVISION

*District Supervisor of Fish Culture, C. W. Harrison*

Very encouraging runs of sockeye occurred to various sections of the Fraser River watershed, and reports indicate that the run generally on the Fraser river was the largest since 1917. An interesting feature of the season was the large proportion of early run fish of the finest quality, which proceeded to the upper waters of the watershed. A splendid run occurred in the Stuart Lake district; the best run for the past twelve years to Bowron lake, and the best for the past twenty years to the Chilcotin district. A good run also appeared at the Shuswap lake, while a light run, but larger than that of four years ago, occurred at Quesnel lake. Good runs were observed at Pitt and Cultus lakes, while the run to the Pemberton district was smaller than it has been for several years.

Before the fishing season of 1929 commenced, the upper fishing boundary on the Skeena was brought down three miles, thereby eliminating some of the most productive gill-net drifting grounds. This conservation measure undoubtedly had considerable effect on the escapement of salmon to the spawning grounds, which were as a whole abundantly seeded.

At Rivers Inlet fishing district, owing to the number of salmon gill-net licenses issued exceeding that for which a forty-eight hour close season was arranged, a sixty-hour close season was enforced from July 5 to August 2. This increased weekly close season, with the weather conditions that prevailed, tended to overcome the increased number of licences, and the spawning grounds of the district as a whole were well seeded; 484,245 cutthroat trout eyed eggs purchased from Mr. S. S. Drew, Montana, were planted out direct as follows: Sumas river, 25,000; Kanaka creek, 25,000; and Nicomekl river, 434,245.

The collections, distributions, etc., at the different hatcheries are dealt with more particularly in the following pages of this report.

#### FRASER RIVER WATERSHED

##### PITT LAKE HATCHERY

*J. McIsaac, Superintendent*

A heavy run of sockeye occurred in the Pitt Lake district, and in addition to a collection of 5,315,000 eggs the natural spawning grounds were very well seeded. The usual collecting grounds at Four Mile creek, Seven Mile creek, Ten Mile creek, Charles Peter creek and Mountain slough, were operated. Over 174,000 fry were reared to the No. 2 fingerling stage. The distribution of sockeye in 1929 from the previous autumn's collection of eggs amounted to 5,119,188, which is slightly larger than that of the previous year. The first and last eggs were respectively secured on September 2 and 26. The conditions at this hatchery permit of only one series of ponds, comprising an area of approximately 860 square feet. The location is quite unfavourable for further expansion, as the hatchery site, and its immediate neighbourhood, is very largely composed of rock boulders. With a view to decreasing the numbers of enemies and competitors to salmon and game fish, approximately 20,000 chub and suckers were destroyed by blasting in Blaney creek.

#### CULTUS LAKE AND SMITHS FALLS HATCHERIES

*A. Robertson, Superintendent*

The Cultus Lake hatchery is the headquarters for the sockeye salmon investigation in British Columbia. The actual fish cultural work is conducted by the hatchery staff, but in such a way as will best suit the program of research laid out by the Biological Board of Canada, and in accordance with the wishes of the resident investigators. In 1928 all the salmon run, nearly 15,000, were retained in Sweltzer creek, the outlet of Cultus lake; 32,656,624 sockeye eggs were secured, of which 2,506,000 were planted in the eyed stage in Dumville, Frost, Smiths Falls, East, West and Windfall creeks, which flow into the lake. Of this number 1,638,000 were planted in Frost creek. Unfortunately this creek ceased to run early in the summer, but as very few fry were to be seen when this occurred, it was assumed that the majority had safely reached the lake. The escapement from the other creeks is reported to have been all that could be desired.

Sockeye made their appearance very slowly during the autumn of 1929, and although a moderate run was expected it was not until November 25 that the number of fish in the enclosures assured a fair collection of eggs. The late arrival of the fish is largely attributed to the low state of the water in Sweltzer

creek. There was little or no rain throughout the spawning season, and it was not until December 25 that the slightest rise occurred in the level of the water in Cultus lake. The total number of sockeye handled was 4,909 (4,449 stripped), as compared with 5,415 in 1925, the preceding cycle year. In 1925, however, the fish were liberated above the fences, and allowed to ripen and spawn naturally in the lake and in its tributary streams. They were lifted over the fences on their first appearance, and under these circumstances the loss through fish dropping back, or dying unnoticed, would readily account for the difference of 506 had the 1925 run been held as they were in 1929. Of the total sockeye handled 382 females and 95 males were found dead on the fences. In previous years all the males found dead on the fences were considered a loss, chargeable to fish cultural operations, regardless of whether they had been stripped or not. This year every male used was marked by the removal of the top of the dorsal fin, and such of these fish as were found dead on the fences were counted as having been spawned; 11,113,285 sockeye eggs were secured, the first on October 30, 1929, and the last on January 8, 1930, a period of ten weeks; 10,090,260 eggs were secured by the ordinary expression method; the fish were then killed, bled, split, and over 1,023,025 additional eggs secured.

With a view to gaining information with regard to the possible injury and loss caused by the long retention of the early run fish, 86 were marked prior to October 15 by the removal of the top corner of the tail fin. The late arrival of the fish, attributed to the low water, prevented more extensive marking, and the possible securing of more conclusive data. Only 39 of the 86 marked fish were recaptured, the discrepancy being due to the fish drifting downstream and the obliteration of the mark through natural decay. Of the 39 recovered 23 were females and 16 males. One female and five males died on the fences unspawned. Five females were spawned unnoticed with the ordinary fish, and 17 females and 11 males were spawned separately, and their eggs held for comparison with the others.

The run of steelhead in Sweltzer creek was light, and only 38,500 such eggs were taken. This collection was augmented by 25,000 from the Cowichan Lake hatchery, and 25,000 from the Bureau of Fish Culture, Division of Fish and Game, Department of Natural Resources of California, in exchange for Atlantic salmon eggs. The resultant fry, 78,652, were retained and fed until they had attained an average length of one and one-half inches, and were distributed in Sweltzer creek and Vedder river.

The late summer and autumn of 1929 were the driest since fish cultural operations were commenced in the district, and the main hatchery at Cultus lake was greatly handicapped through a shortage of water. It was for some time feared that the eggs would have to be transferred to the hatchery buildings at Harrison lake and Smiths Falls. One million and one thousand of the sockeye eggs collected in 1928 were planted in an eyed stage in Eagle river, approximately 300 miles further up the Fraser river than the point where the eggs were collected. With a view to decreasing competitors and possible enemies of the sockeye, 875 suckers, averaging one pound each, were destroyed by the hatchery staff. A good run of coho reached the traps on Christmas day, and were dipped over the fences into the lake after 246,000 eggs were secured. A small number of chum salmon eggs, viz., 35,000, were also taken. One hundred and ninety-one thousand sockeye eggs from Harrison lake were laid down in Cultus Lake hatchery during the autumn for hatching purposes. The resultant fry will be taken back to Harrison for distribution. The requirements of the biological Board, University of British Columbia, and Hastings park aquarium, in the way of sockeye salmon and eggs, which amounted to over 535,000, were supplied from this establishment. Outgoing shipments of sockeye eggs amounted to 7,602,400 for Harrison lake, and 1,001,000 for Pemberton. Cultus in 1929 distributed 4,045,060 sockeye and 78,652 steelhead salmon.

## HARRISON LAKE HATCHERY

*E. V. Epps, Officer in Charge*

In the autumn of 1928 the Harrison Lake hatchery was temporarily refitted to take care of eggs collected at Cultus Lake in excess of the capacity of the hatcheries at that place. During the autumn of 1928, 17,988,050 sockeye eggs were transferred to Harrison lake from Cultus lake, and in the winter following a further transfer of 7,602,400 was made from the same source. Of the total 25,590,450 Cultus Lake eggs handled at Harrison lake, 15,036,000 were planted in Eagle river and 602,000 in Salmon river in the Shuswap Lakes district. The balance of 8,562,000 were planted in the Harrison Lake district, including Morris creek, making a total distribution of 24,200,000 sockeye. During the autumn of 1929 preparations were made to collect sockeye eggs in Hatchery and Trout creeks at the Harrison Lake hatchery. The season was extremely dry with no visible flow in Trout creek. Consequently very few sockeye made their appearance and the total collection in that area was 191,000 sockeye eggs which were transferred to the Cultus Lake hatchery. These eggs will, however, be retransferred to Harrison lake as only the sockeye native to Cultus lake are being distributed in Cultus waters.

## PEMBERTON HATCHERY

*T. W. Graham, Superintendent*

In June this hatchery received 30,000 Kamloops trout eyed eggs from Lloyd's Creek hatchery, and in July, 25,000 of the same species from Penask lake. Low water conditions were experienced in the Birkenhead river, where the supply of sockeye eggs for this establishment are secured, and the run of salmon was not up to the average of recent years, the collection of 18,000,000 being the smallest since 1918, although it is estimated that 95 per cent of the sockeye were spawned. In February, 1929, 1,001,000 sockeye salmon eyed eggs were received from Cultus lake. From these and the eggs carried over from 1928, 2,380,000 fry and 300,000 eggs were distributed in Gates lake and creek and Anderson lake at the head of the Anderson-Seton Lakes system.

## PENASK LAKE HATCHERY

*A. P. Hills, Officer in Charge*

Experimental egg collections begun in 1928 for the purpose of ascertaining the available supplies of Kamloops eggs in Penask and adjoining lakes, were continued in 1929. The lake was reached on April 29, when parts of Penask creek were still frozen over. A fence was placed in Penask creek on May 3, it being necessary to cut the ice out of the creek. Ice did not break up on the lake until May 17, and on that date a fence was placed in Spahomin creek, the outlet of the lake. A number of fish had previously passed down the creek through the spawning grounds, and only a small collection was made at this point. A few fish were observed in Penask creek on May 19 and on the 20th approximately two hundred entered the trap, but were in a very immature condition. The trap was consequently closed and re-opened on May 24, when over four thousand fish entered it within three hours, none of which were in a spawning condition. Fish eggs were collected in Spahomin creek on May 24 and in Penask creek on June 10. The eggs were eyed in baskets placed in floating racks in Penask creek, and a small number in the ordinary shipping trays, which were also stacked and held in the racks. Approximately seventy-five per cent of the eggs collected in Penask creek were taken at a point some three miles from the lake, as the majority of those fish that reached the main

trap, one mile from the lake, were in a very green condition. It is estimated that the enormous number of approximately fifty to sixty thousand Kamloops trout ascended Penask creek. A heavy toll was, however, taken by the local Indians for food purposes. Spahomin creek supplied 53,000 and Penask creek 1,217,000 eggs, making a total of 1,270,000 Kamloops trout eggs which completely filled all the hatching equipment on the ground. In view of the season's experience a permanent camp was established and a hatchery building, with accommodation for the staff constructed. This hatchery building, fifty feet by twenty-two feet, with open sides and ends, has accommodation for thirty-two hatching troughs in eight clusters of four each. Each trough is sixteen feet long, ten and one-half inches wide, and six and one-half inches deep. The living quarters are thirty feet by twenty feet inside measurement, divided into a living room and four bedrooms. The water is carried to the hatchery by an eight hundred foot flume, leading from a shallow dam in Penask creek. The living quarters are of log construction. All logs, sills, etc., were cut on the site. Penask shipped to Cowichan Lake hatchery 2,000 eyed Kamloops eggs, to Pemberton 25,000, and to Summerland 464,855. It also sold to Sunnyside hatchery 25,000 Kamloops eggs. The local distribution amounted to 718,778 Kamloops.

#### LLOYD'S CREEK HATCHERY

*G. J. Morgan, Officer in Charge*

Owing to the exceptionally light snowfall in the district during the previous winter, and consequently small run-off, the creeks were at a very low stage during egg collecting operations. An average run of Kamloops trout occurred at Paul creek, but there was not sufficient water to enable the trout to ascend to the traps in any numbers. The lower reaches of the creek were abundantly seeded, but a collection of only 182,000 Kamloops trout eggs was made where formerly the greater portion of the eggs secured for this station were collected. The run at Pinantan creek was well up to the average and the collection amounted to 966,000 Kamloops trout eggs, more than double the collection of the previous year. Hyas Long lake collection was disappointing owing to unfavourable water conditions during which the trout did not school to any extent at the outlet of the lake where it would have been feasible to secure them, but spawned along the beaches over a considerable area. The collection amounted to only 87,500 Kamloops trout eggs. One hundred and thirty thousand eggs were collected at the request of the Forestry Branch of the Department of the Interior at Fish lake and planted in a green state in a ditch previously prepared for their reception. One hundred and thirty thousand were also collected at this point and laid down in Lloyd's Creek hatchery. The total collection in the district amounted to 1,495,500 Kamloops trout eggs, which gave a distribution of 1,130,100 eggs and fry including 50,000 sold to private hatcheries (Ewing's hatchery 20,000, Sunnyside hatchery 30,000) and 100,000 to the Fisheries Experimental Station, Archi-Ken, Japan, but exclusive of shipments of 125,000 eyed eggs to Lakelse Lake hatchery, 75,000 to Nelson hatchery, 30,000 to Pemberton hatchery and 75,000 to Cranbrook Trout club, this latter in exchange for cutthroat trout.

#### SQUILAX EGG COLLECTING CAMP

*J. W. Dalzell, Officer in Charge*

Five hundred and five thousand sockeye salmon eggs were collected in Adams river, Shuswap lake, and transferred to the Experimental station operated by the Biological Board at Taft on Eagle river. These eggs are being used by the board in connection with its investigation into the results that may

be expected from the stocking of suitable, but at present barren, areas of the Fraser river with eggs and fry from other parts of the same system. An inspection of Little river, Adams river and Scotch creek was begun on September 4 by G. J. Morgan, but no sockeye were observed and conditions were found to be most unfavourable in Scotch creek, the water being extremely low throughout, and only more or less stagnant pools being found in the creek for over a mile from its outlet into the lake. A few sockeye were reported as being in the creek about three miles from its mouth in August before the water had receded. Apart from a few dozen fish observed at Adams river and Scotch creek the main run did not make its appearance in this district until October 14, when large numbers were seen in both Adams and Little rivers. The great majority of the fish were males with a corresponding shortage of females and considerable difficulty was experienced in getting the eggs desired.

#### STUART LAKE HATCHERY

*H. C. Crawford, Superintendent*

Crawford and Rainbow lakes which have been used as natural retaining ponds or nurseries for fry were not planted in the spring of 1929 because numbers of sockeye planted there in previous years did not migrate as yearlings but became land-locked. These land-locked fish have proven exceptions to the generally accepted belief that sockeye must go to sea before they reproduce, and also that sockeye die after their first spawning. During 1929, 69,000 sockeye eggs were collected from Crawford and Rainbow lake fish. These fish had never left the lake, since the outlet stream is so precipitous that it is impossible for salmon to ascend it from the lower level. Crawford lake, which is about 730 yards long, 280 yards wide and 33 feet deep, had been found teeming with natural fish food but barren of fish. It was planted with sockeye fry for the first time in 1921. Most of the fish from this distribution left the lake of their own accord about the middle of May and the middle of June, 1922, when they ranged from  $3\frac{1}{2}$  to  $5\frac{1}{2}$  inches in length. Fry planted in 1922 averaged about 2 inches in length in June of that year and in the following year they migrated in very large numbers. In 1924 equally favourable results were observed, though the average size of the fish was, if anything, larger than in previous years. In 1925, when migration started on May 17, the fish were apparently of rather smaller size than in former years, but at the same time a small percentage of larger-than-average size fish were observed and were considered to be two-year olds. Two distinct sizes were noticed—one averaging  $4\frac{1}{2}$  inches and the other 7 inches. This was the first time that fish of this larger size had been seen among the migrants from Crawford lake. A small percentage of fingerlings or fish in their first year was noticed each season in the general migration, but in 1926, such fish were present in greater numbers than usual. In the following year an increase was observed in the number of large fish, two-year olds, and a decrease in the general run. Practically no migration of yearling sockeye was observed in 1928, and it was decided to discontinue further stocking for a period of three years. In the autumn of 1928 a test net was set and 20 sockeye ranging from two-year olds to mature land-locked fish carrying eggs were caught in one night. The collection of land-locked sockeye eggs was undertaken in the autumn of 1929. Four hundred and ninety-six fish were caught. The females, most of them ripe when taken, greatly out-numbered the males. Out of 307 fish up to September 4, only 36 were males. The spawners were a dirty greyish green on the back and sides and a mottled grey underneath. The fish containing immature eggs were a bright silvery colour. Unlike sockeye that return from the sea, these land-locked fish did not turn red. The eggs collected were of poor quality, a condition partly attributed to the scarcity of males and the manner in which the fish had to be taken, namely, in gill-nets. In order to

further test the theory that all sockeye die after their first spawning, 7 spawned fish were placed in pens and kept under observation for a period of two weeks. At the end of that period they were in a better and more vigorous condition than they were when first placed in the retainers. In the spring of 1929, 4,100 sockeye yearlings were marked by the removal of the adipose and the posterior half of the dorsal fins. One thousand marked between May 6 and 8 were migrants from Rainbow lake and 3,100 marked between May 14 and 15 were migrants from Alexander lake. The migration of yearling sockeye from Alexander lake during the month of May was estimated between 80,000 and 100,000. Efforts are being made to decrease the numbers of land-locked sockeye in Crawford and Rainbow lakes with a view to restoring these lakes to their former condition as excellent natural retaining ponds, and with this end in view, 496 such fish were netted and removed from the former and 1,078 from the latter.

The run of sockeye to the Stuart lake district in the autumn of 1929 was the largest since that of 1909. The first sockeye was caught at the entrance to the lake on July 17, the run passing through Stuart lake and up Tatche river. No sockeye appeared in Souche or Pinche creeks where a collection of eggs could possibly be made. Three million two hundred thousand sockeye fry hatched from the collection of 1928 were distributed in Stuart, Cunningham and Grass lakes. Fourteen thousand one hundred and fifty land-locked sockeye, eggs and fry from the 1929 collection were planted in Cunningham creek. The Fishery Guardian for the district reports that two distinct runs of sockeye occurred in 1929, the first covering the period between July 17 and August 31, and the second starting about September 25 and continuing until about October 3; that the fish on the first run reached the lake in splendid physical condition, but that those of the second run were quite the reverse, many being so spent and exhausted that they could not reach the spawning creeks in the upper watershed but spawned in Stuart river, and along with the lake trout around the islands and on the south shore of Stuart lake.

General repairs were effected, including the construction of a new water supply dam, the cutting of a channel through a large log jam in Hoy creek in Middle river, cleaning the outlet streams from Waterlilly, Grass and Rainbow lakes, and the opening up and deepening of portions of the outlet of Crawford lake.

#### MAINLAND WEST COAST

##### RIVERS INLET HATCHERY

*F. A. Tingley, Superintendent*

The spawning grounds in the Owikeno Lake area as a whole were well seeded by natural spawning. A heavy run of sockeye occurred in Wauquash and Dallick rivers. There were good runs in Indian, Cheo, Shumahalt and Nookins rivers. Quap and Genesi creeks were fairly well seeded by the fish that escaped over and around the hatchery fences during the freshet on October 16, and from those that remained to ascend after the fences were removed. There was also a good run in the hatchery (Meadowse) creek, though the spawning area is small. Askum creek carried a light run.

The freshet in October, although heavy, was early in the season and of short duration, and does not appear to have caused unusual damage to the spawning grounds. The heaviest freshet of the season usually occurs late in December or early in January. In 1929 while there was heavy rain in December, the temperature was sufficiently low to make snow in the higher levels and the streams were not extremely high. Up to the end of the year, Superintendent Tingley is of the opinion that the condition of the spawning grounds was better than usual so far as they were affected by freshets. The run to Quap creek commenced unusually early, 320,000 eggs being taken at the first spawning on

September 17. The collection was completed at this point on November 7 with a total of 15,580,000 sockeye eggs. The collection at Genesi creek totalled 4,494,000 sockeye eggs, the first spawning being done on October 3, and the last on November 4. At Quap, 5,040 females and 2,085 males were used; and at Genesi, 1,465 females and 630 males; a total of 6,505 females and 2,715 males for the district. Total collection for the season was 20,074,000 sockeye eggs.

From the 1928 collection 4,936,000 eyed sockeye eggs and 8,679,046 sockeye fingerlings were distributed in Owikeno lake and its tributaries in 1929; 240,000 eyed eggs were also planted in Genesi creek from the 1929 collection, making a total distribution for the year of 13,855,046 sockeye.

That the eyed sockeye eggs that were planted in the small stream flowing into Walkus lake in 1922 have survived and reproduced was evidenced by the appearance of sockeye of small size, mostly males in an advanced stage of development in different parts of the lake last autumn. The outlet stream of this lake goes over a high fall, making it quite impossible for fish from the lower levels to surmount, consequently the spawning fish observed must have been the result of the egg planting referred to.

### SKEENA RIVER WATERSHED

#### LAKELSE LAKE HATCHERY

*C. R. T. Hearn, Superintendent*

The whole of the retaining pond system was thoroughly cleaned out and the sections in which the heaviest losses had occurred the previous year were heavily sown with salt for disinfection purposes, the salt being left in them during the winter. The ponds at this plant are in three series in old water channels containing respectively 2,490, 4,560 and 2,550 square feet, or a total pond area of 9,600 square feet. The fingerling production compared very favourably with that of previous years, the size attained at time of distribution when little over seven months old being three inches long and three-quarters of an inch deep. Practically the only artificial food used was halibut meal which at this point at least gives every satisfaction. Seven hundred and twenty-eight thousand fry were transferred to the pond on April 1 and a further 26,000 on April 8. Two hundred and fifty thousand fingerlings were distributed on May 10 and a further 200,000 on the 5th, 7th and 8th of June, the loss up to that date being less than one per cent. The final distribution was made on September 26. The conditions on the spawning grounds of the important tributaries of Lakelse lake were quite favourable during the early part of the season but three serious freshets occurred, as severe as that experienced in 1925, on October 12 and on the 13 and 28 of November. These freshets were so severe and did so much damage to the spawning grounds that only meagre results may reasonably be expected from the natural seeding that took place in the larger and more important tributaries of the lake. The run of sockeye to this system was fairly good, comparing favourably with that of the cycle year 1925 in which it will be remembered two very severe freshets were experienced in November and December, causing extensive and serious damage to the spawning beds of the two principal streams, viz., Williams and Scullabuchan. The run to the first mentioned was not as large as that of four years ago but the number of fish that returned to the latter was the largest during the past eight years. One hundred and twenty-five thousand Kamloops trout eyed eggs were received at this hatchery in June from Lloyd's Creek hatchery and were distributed in the Prince George, Prince Rupert and Smithers districts. General repairs were effected, including the construction of a fence in the main channel of Williams creek. Eight million one hundred and eighty-three thousand sockeye eggs were collected; 5,223,100 sockeye hatched from the collection of 1928 were distributed.

## BABINE LAKE HATCHERY

*R. H. Eaton, Superintendent*

The run of sockeye through all parts of the Babine Lake area was exceptionally good, and all such areas were well seeded naturally in 1929. The fish on an average were of good size, and the runts (small males) were relatively scarce in comparison with last year. The collection of eggs was begun in Morrison creek on September 9; 1,063 females and 955 males were stripped at the hatchery yielding 3,000,000 sockeye eggs; 4,830,000 were also secured at the lower fences between September 10 and September 21 from 1,691 females and 1,462 males, making the total collection of sockeye eggs 7,830,000. In addition to this collection the spawning grounds of the creek were very heavily seeded. An unusual run of sockeye fingerlings averaging 2 inches in length were observed in Morrison creek during the latter part of July and the early part of August. The migration of yearling sockeye in the creek was the largest in number and extended over a longer period than in any year since the appointment of the present superintendent. The first yearlings were observed on May 5 and the last on June 4. A series of leaks occurred in the dams of the retaining ponds which permitted the escape of most of the fry retained therein to Morrison creek. On August 16 and 17, 1,045 No. 2 fingerlings were marked by the removal of adipose fin and liberated in Morrison creek. The Superintendent reports that when the collection of eggs was completed more sockeye were in the creek than when the collection started. Seven hundred and eighty thousand eggs were secured by incision after the fish had been spawned in the usual way. Extensive repairs were completed by the staff during the summer, including the renewal of the hatching troughs and the construction of a boathouse 16 feet wide, 36 feet long and 13 feet high to the plate, with marine ways 110 feet long. The boathouse is constructed of spruce logs with a spruce shake roof. The marine ways with cradle and capstan fill a long-felt want and enable two men to house the launches as desired.

This hatchery suffered a severe loss in the person of Mr. W. R. Johnston, its oldest employee, who was accidentally killed when returning from his annual leave on September 2.

A distribution of 7,754,521 sockeye eggs, fry and fingerlings was made from the egg collection of 1928.

## VANCOUVER ISLAND

## ANDERSON LAKE HATCHERY

*David Bothwell, Superintendent*

A long period of frosty weather without rain or snow was experienced during January and February, 1929. These conditions were accompanied by an extremely low stage of water in many of the creeks, which in some instances caused a heavy loss in eggs. The first sockeye eggs were collected and placed in the hatchery troughs on October 19, 1929. Collecting operations were continued until October 31. During this period 6,153,000 eggs were taken. An interval of seventeen days was allowed to elapse before egg collecting was resumed on November 18. On this and the following day, November 19, 2,352,000 were secured, making a total of 8,505,000 sockeye eggs for the season. The most favourable spawning conditions prevailed throughout the whole spawning season that the superintendent has observed during his nineteen years at this station. No freshets occurred, low water conditions prevailed, and all spawning grounds were heavily seeded, the most serious damage being caused by spawning fish uncovering the eggs of the early spawners. Forty per cent of the fish spawned in Clemens Creek and approximately sixty per cent of the spawning took place on the beaches of the lake. The low water conditions above mentioned continued into the winter and serious losses were caused by the eggs being frozen.

The number of sockeye that reached the spawning grounds in 1929 is estimated at 135,000, the largest number observed in the experience of the present Superintendent and nearly double the estimated number for the preceding year.

Facilities were provided for the planting of sockeye eggs in Maggie lake and its tributaries with a view to establishing a seasonal run to this body of water. A cabin was built of logs with shake roof with a six foot verandah or overhang of the roof. The building inside is 18 feet 6 inches by 13 feet 4 inches, with shiplap floor and door. It is about 100 feet from the edge of the lake on a small bench above high water mark. Maggie lake is situated about forty miles below Port Alberni, and about two and one-half miles from Alberni canal on the north shore. It is  $2\frac{1}{2}$  miles in length with an average width of one-half mile. The greater part of the lake is fairly deep with a good proportion covered with aquatic vegetation. It has two inlet streams which provide favourable planting areas for the eggs. The only unfavourable feature appears to be a fall of about fifteen feet in height in the outlet stream about  $1\frac{1}{2}$  miles below the lake. This fall is a complete barrier to the ascent of salmon, but should the species be successfully established a fishway can be constructed at small expense on a small channel adjacent to the main stream. The first planting of sockeye eggs (1,001,000) was made in December, 1929, from this year's collection.

Some repairs were made during the year including foundation posts, hewn cedar sills for the main hatchery building, and 100 feet of water supply flume. A distribution of 8,787,881 sockeye eggs and fry was made during 1929, 6,281,881 of which were from eggs collected in 1928, and 2,506,000 from the collection of 1929.

#### COWICHAN LAKE HATCHERY

*J. H. Castley, Superintendent*

Low water conditions at Skutz falls on the Cowichan river presented a serious barrier to the ascent of salmon to the upper reaches of the river, and consequently interfered greatly with the collection of such eggs. For this reason the fall run of spring salmon was practically a failure, but a small freshet early in October permitted a few fish to get past the falls. These were in a badly battered condition when they reached the hatchery nets and the eggs secured from them were consequently of poor quality. The spawning grounds on the upper part of the river were for the same reason poorly seeded with salmon eggs. The same conditions also interfered with the coho collection. The run was small and many of the fish taken in November were not only badly battered but also covered with fungus. On November 10, fishing operations for coho were suspended, but following a rise in the river, fishing was resumed on November 14 and continued until December 23, when there was a fair average run of this species, which was maintained until the end of the year. Nine hundred and twelve thousand two hundred coho eggs were taken. The natural seeding of this species was a good average. Fishing for parent steelhead in the Cowichan river was abandoned on account of low water and zero weather on January 29, but was resumed on February 13 and continued until February 28. Eight thousand two hundred eggs were also taken on April 6 in Nuttall creek, making the total collection of steelhead salmon eggs 137,900. The collection of cutthroat trout eggs was commenced on February 24, with the termination of the main steelhead operations, and continued until March 29, with a collection of 201,200, which was somewhat greater than the previous season. Twenty-five thousand eyed eggs of this species were received from Cranbrook hatchery in June, 1929. Spring salmon operations began on October 14 and continued until November 11, with a take of 432,000 eggs, which was considerably smaller than the collection of the previous year. A collection of 56,000 speckled trout eggs was made in Spectacle lake and 194,000 from the hatchery ponds. The collection at the first mentioned place was also greatly hampered by low water. Two thousand Kamloops trout eyed eggs were received in July from Penask

Lake hatchery. Twenty-five thousand steelhead eggs were shipped to Cultus in April. Trout fishing in the Cowichan river was very good. Excellent sport was obtained in the early months, as well as during September and October. Land-locked sockeye (Kokanee or little Red fish) were observed for the first time by the hatchery staff in Cowichan lake. General repairs were effected, including repairs to the hatchery dam, new spillway, and new floats (logs) under the old boat house, which was towed up the river to the foot of the lake, where it gave shelter for the hatchery launch during the summer months, when the water is too low in the river to admit of the boat being taken to the hatchery.

The total distribution from Cowichan lake hatchery for the season was 1,971,746 made up by species as follows: cutthroat trout 212,324, speckled trout 126,250, spring salmon 1,535,280 and steelhead 97,892.

#### KENNEDY LAKE HATCHERY

*W. P. Forsythe, Superintendent*

A distribution of 2,560,159 sockeye was made in 1929 from the 1928 collection. None of these were released direct from the hatching troughs. All were transferred to retaining ponds when they reached the free-swimming stage, and were released from the ponds as was necessary to prevent overcrowding. All of the season's output was retained and fed in the ponds for from two to three weeks. To the No. 1 fingerling stage they were fed halibut meal, and subsequently halibut meal and whale meat, but after the No. 4 fingerling stage was reached whale meat only was used. Some of the fingerlings were five inches in length before they were liberated. Eleven retaining ponds were in operation during the season. Two more are under construction, which when completed will give a total pond area of 6,678 square feet. The early June run of sockeye, which spawn in late August and early September, was better than usual. Three hundred and ninety-seven thousand such eggs were secured between September 3 and 25. In addition some natural spawning took place, under splendid conditions, and one portion of the Clayoquot river was heavily seeded in this way. The eggs from this early run commenced hatching on November 12, only sixty-nine days after they were taken. The fall run of sockeye to Kennedy lake was estimated at fifteen thousand. The natural spawning grounds of Clayoquot arm and Cold creek were well seeded. The return to the Upper Clayoquot river was also much better than usual, but that to Elk lake was poor. Muriel lake had a run of from two to three thousand fish. This lake has been inspected each season during the last twelve years, with the exception of 1928, and never more than from ten to fifteen sockeye were observed, as against two to three thousand in 1929. This improved and larger run appeared when the fish resulting from egg planting from the hatchery were due to return.

Conditions were very favourable for natural spawning throughout the spawning season, and up to the end of the year. The collection of eggs from the late run commenced on October 29 and finished on November 26. Seven million four hundred and ninety-two thousand sockeye eggs were secured for the whole season, as compared with two million eight hundred thousand in 1928, and three million three hundred thousand in 1927.

#### SOUTHERN INTERIOR

##### NELSON HATCHERY

*Weldon Reid, Superintendent*

Four hundred and ninety-four thousand eight hundred rainbow trout, one million two hundred and ninety-one thousand eight hundred and twenty speckled trout and four hundred and ninety-seven thousand four hundred and forty-eight

Kokanee salmon (little red fish) eggs were collected in 1929 for the Nelson hatchery. The rainbow trout eggs were secured during May and June in Cottonwood and Six Mile lakes. The speckled trout eggs were obtained as follows: nine hundred and five thousand seven hundred and forty in Boundary lake, and three hundred and eighty-six thousand and eighty in Violin lake in October and November. The speckled trout collection was almost double that of the previous year. Little red fish were obtained in Kokanee and Red Fish creeks, Kootenay lake. The collection of this species was also double that of 1928. Local collections were supplemented by shipments of Kamloops trout eggs from Lloyd's creek and Gerrard hatcheries of 75,000 and 500,000 respectively. Nelson shipped Summerland in February 107,500 speckled trout eyed eggs. It also supplied Cranbrook Trout Club with 50,000 Kamloops eggs in exchange for cutthroat trout eggs. The total distribution from this hatchery for 1929 was 1,596,211 by species as follows: Kamloops trout, 479,215; Rainbow trout, 460,589; speckled trout, 392,407; and Kennerly's salmon, 264,000.

#### GERRARD HATCHERY

*Weldon Reid, Superintendent*

The Gerrard is subsidiary to the Nelson establishment, and confines its operations to the propagation of Kamloops trout. Spawning operations extended from May 5 to 24 inclusive, during which period four hundred and fifty-nine fish were handled, and one million eight thousand eggs secured. This collection is almost double that of each of the two previous seasons. It shipped 500,000 Kamloops eggs to Nelson and also made a distribution of 446,913 Kamloops fry.

#### SUMMERLAND HATCHERY

*G. N. Gartrell, Fisheries Inspector*

The Summerland hatchery, under the general direction of Fisheries Inspector Gartrell, makes no independent collection, but secures its eggs from other sources. During 1929 it received 5,000,000 whitefish eggs from Fort Qu'Appelle hatchery, Saskatchewan, 107,500 speckled trout eggs from Nelson, and 464,855 Kamloops trout eggs from Penask lake. Its total distribution of all species for the season was 5,238,200, made up as follows: Kamloops trout, 450,850; speckled trout, 107,350; and whitefish, 4,680,000.

#### CRANBROOK HATCHERY

*H. J. Ryder, Officer in Charge*

The Cranbrook hatchery was built and is maintained by various local organizations. The department each season loans an experienced hatchery officer, has loaned certain equipment, and contributes to the extent of \$300 towards the cost of egg collection. The distribution of the output is under the direction of the department, and not more than twenty-five per cent is distributed outside of the Cranbrook district. Its operations have been transacted with splendid success since its establishment. In 1929, one million and eighty-four thousand cutthroat trout eggs were collected in Fish lake, forty-six thousand in Mineral lake, three hundred and forty-seven thousand in Munroe lake and sixty-one thousand in Peavine creek, making a splendid total for the season of one million five hundred and thirty-eight thousand. Thirty-three thousand Cranbrook trout eggs were secured in Munroe lake. Local collections were supplemented by fifty thousand Kamloops trout eggs from the Nelson and seventy-five thousand from Lloyd's creek hatchery. The total distribution for the season was one million four hundred and ninety-eight thousand, three hundred and eighty-nine and by species as follows: 1,348,314 cutthroat trout, 121,925 Kamloops trout, and 28,150 Cranbrook trout.

THE FOLLOWING TABLE SHOWS BY SPECIES THE LOCAL COLLECTIONS OF EGGS MADE DURING 1929, THE POINT WHERE SUCH EGGS WERE TAKEN AND HATCHERY IN WHICH THE EGGS WERE LAID DOWN, WITH NUMBERS LAID DOWN IN EACH CASE.

Species	Collection Area	Number collected	Laid down in	Number laid down	Subtotals	Totals

THE FOLLOWING TABLE SHOWS BY SPECIES THE LOCAL COLLECTIONS OF EGGS MADE DURING 1929, THE POINT WHERE SUCH EGGS WERE TAKEN AND HATCHERY IN WHICH THE EGGS WERE LAID DOWN, WITH NUMBERS LAID DOWN IN EACH CASE.—*Concluded*

Species	Collection Area	Number collected	Laid down in	Number laid down	Subtotals	Totals
Hybrid brown trout.....	Yarmouth hatchery ponds, Yarmouth county, N.S.	2,050	Yarmouth hatchery.....	2,050	2,050	
Loch Leven trout.....	St. John hatchery ponds, St. John, N.B.	44,581	St. John hatchery.....	44,581	44,581	46,681
	Yarmouth hatchery ponds, Yarmouth county, N.S.	1,105	Yarmouth hatchery.....	1,105	1,105	
Rainbow trout.....	St. John hatchery ponds, St. John, N.B.	46,592	St. John hatchery.....	46,592	46,592	47,697
	St. John hatchery ponds, St. John, N.B.	49,445	St. John hatchery.....	49,445	49,445	
	Pisquid lake, P.E.I.	26,535	Kelly's pond hatchery.....	26,535	26,535	
	Cameron lake, Waterton lakes, Alta.	34,040	Waterton lakes hatchery.....	34,040	34,040	
	Cottonwood lake, Nelson, B.C.	225,600	Nelson hatchery.....	225,600	225,600	
Salmon trout.....	Six Mile lake, Nelson, B.C.	269,200	Nelson hatchery.....	269,200	494,800	604,820
	Cold lake, N. E. of Edmonton, Alta.	66,475	Cold lake, and Banff.....	66,475	66,475	
Kemmerly's salmon.....	Banff hatchery ponds, Banff, Alberta.	9,500	Banff hatchery.....	9,500	9,500	75,975
	Kokanee creek, Kootenay lake, B.C.	281,418	Nelson hatchery.....	281,418	281,418	
Steelhead salmon.....	Redfish creek, Kootenay lake, B.C.	216,030	Nelson hatchery.....	216,030	497,448	497,448
	Sweltzer creek, Cultus lake, B.C.	38,500	Cultus lake hatchery.....	38,500	38,500	
	Cowichan river, Vancouver island, B.C.	129,700	Cultus lake hatchery.....	129,700	137,900	176,400
Chum salmon.....	Nuttall creek, Vancouver island, B.C.	8,200	Cowichan lake hatchery.....	8,200	137,900	176,400
Coho salmon.....	Sweltzer creek, Cultus lake, B.C.	35,000	Cowichan lake hatchery.....	35,000	35,000	35,000
	Sweltzer creek, Cultus lake, B.C.	246,000	Cultus lake hatchery.....	246,000	246,000	
	Cowichan river, Vancouver island, B.C.	912,200	Cowichan lake hatchery.....	912,200	912,200	1,158,200
Spring salmon.....	Cowichan river, Vancouver island, B.C.	432,000	Cowichan lake hatchery.....	432,000	432,000	432,000
						*884,107,422

(a) Includes small collection taken in 1930.

(b) Landlocked sockeye salmon.

\* This collection represents intake from spring and autumn spawners 1929. The fry and fingerlings resulting from the spring spawners were distributed 1929, but most of the eggs collected from the autumn spawners are still on hand and will not be distributed until spring of 1930.

The following summary gives, by species, the total receipt of eggs at all Federal hatcheries during the year ended December 31, 1929:—

Atlantic salmon.....	28,855,252	
Landlocked salmon.....	84,000	
Rainbow trout.....	604,820	
Cutthroat trout.....	706,305	
Steelhead salmon.....	176,400	
Kamloops trout.....	3,773,500	
Sockeye salmon.....	87,277,285	
Spring salmon.....	432,000	
Coho salmon.....	1,158,200	
Chum salmon.....	35,000	
Speckled trout.....	4,237,873	
Whitefish.....	357,505,000	
Salmon trout.....	75,975	
Pickeral.....	398,340,000	
Brown trout.....	254,036	
Brown trout (hybrid).....	46,631	
Loch Leven trout.....	47,697	
Kennerly's salmon.....	497,448	
		884,107,422

The following purchases were also made:—

Brown trout eyed eggs from Cedar Island lodge, via Brule, Wisconsin, laid down as follows—		
Banff hatchery.....	210,830	
Fort Qu'Appelle hatchery.....	103,000	
		313,830
Cutthroat trout eyed eggs from S. S. Drew, Esq., Troy, Montana, laid down as follows—		
Waterton lakes hatchery.....	504,000	
Cutthroat trout eyed eggs from S. S. Drew, Esq., Butte, Montana, laid down as follows—		
Banff hatchery.....	1,088,000	
Cutthroat trout eyed eggs from S. S. Drew, Esq., Warm Springs, Montana, laid down as follows—		
Sumas river, B.C.....	25,000	
Kanaka creek, B.C.....	25,000	
Nicomekl river.....	434,245	
		2,076,245
Loch Leven trout eyed eggs from Cedar Island Lodge, via Bozeman, Montana, laid down at Banff hatchery.....	288,217	
		288,217
Rainbow trout eyed eggs from S. S. Drew, Troy, Montana and Gateway, Montana, laid down as follows—		
Banff hatchery.....	751,200	
Waterton Lakes hatchery.....	692,930	
		1,444,130
Speckled trout from American Fish Culture Co., Carolina, R.I., laid down as follows—		
Antigonish hatchery.....	991,400	
Bedford hatchery.....	1,052,175	
Middleton hatchery.....	1,143,544	
Yarmouth hatchery.....	1,090,000	
Florenceville hatchery.....	494,750	
Grand Falls hatchery.....	988,800	
St. John hatchery.....	46,680	
Kelly's pond hatchery.....	490,300	
		6,297,649
Speckled trout from Brook Trout Co., of Penn Forest, Mauch Chunk, Pa., laid down as follows—		
Antigonish hatchery.....	483,000	
Bedford hatchery.....	473,170	
Yarmouth hatchery.....	480,900	
Florenceville hatchery.....	475,020	
St. John hatchery.....	26,320	
		1,938,410
Speckled trout from Paradise Brook Trout Co., Cresco, Pa., laid down as follows—		
Antigonish hatchery.....	930,930	
Bedford hatchery.....	697,310	
Middleton hatchery.....	1,653,635	
Windsor hatchery.....	35,000	
Yarmouth hatchery.....	1,050,000	
Grand Falls hatchery.....	879,420	
Miramichi hatchery.....	100,395	
Restigouche hatchery.....	264,345	
St. John hatchery.....	38,480	
Kelly's Pond hatchery.....	550,260	
Jasper Park hatchery.....	251,664	
		6,451,439
		18,809,920

Donation received—

Salmon trout eyed eggs from the Department of Game and Fisheries, Ontario, Port Arthur hatchery, laid down as follows—

Fort Qu'Appelle hatchery.....	98,600
Winnipegosis hatchery.....	115,500
	<hr/> 214,100

Grand total of eggs received during calendar year 1929..... (a) 903,131,442

(a) This collection represents intake from spring and autumn spawners 1929. The fry and fingerlings resulting from the spring spawners were distributed in 1929, but most of the eggs obtained from the autumn spawners are still on hand and will not be distributed until spring of 1930.

The following exchanges were made in 1929:—

In exchange for Atlantic salmon—

Brown trout eyed eggs from the "Trout Brook Company, Hudson, Wisconsin." Laid down at Fort Qu'Appelle hatchery.....	31,000
Cutthroat trout eyed eggs from "United States Bureau of Fisheries, Yellowstone Park, Wyoming." Laid down at Waterton Lakes Park hatchery.....	500,180
Steelhead salmon eyed eggs from "Bureau of Fish Culture, California, U.S.A." Laid down at Cultus Lake hatchery.....	25,000

In exchange for Kamloops trout—

Cutthroat trout eyed eggs from the Cranbrook Trout Club hatchery. Laid down at Cowichan lake hatchery.....	25,000
--	--------

STATEMENT OF EGGS AND FRY SUPPLIED TO OTHER THAN THE DOMINION GOVERNMENT HATCHERIES DURING 1929

Species	Number	Stage of development	Source	To
Atlantic salmon.	200	Eggs.....	Bedford hatchery.....	Biological Board, Professor Gowanloch (donated).
Atlantic salmon.	1,350	Eggs.....	Bedford hatchery.....	Biological Board, Dr. Leim (donated).
Atlantic salmon.	300	Fingerling	St. John hatchery.....	Biological Board, St. Andrews (donated)
Atlantic salmon.	28,000	Eggs.....	Miramichi hatchery.....	Bureau of Fish Culture, California, Port Seward hatchery, in exchange for Steelhead salmon eggs.
Atlantic salmon.	1,000,000	Eggs.....	Miramichi hatchery.....	United States Bureau of Fisheries, Craig Brook hatchery, East Orland, Maine, in exchange for Loch Leven trout eggs received at Banff and Fort Qu'Appelle hatcheries in December, 1928, and Cutthroat trout eggs received at Waterton Lakes hatchery in 1929.
Kamloops trout.	100,000	Eggs.....	Lloyds Creek hatchery.	Fisheries Experimental Station, Archi-Ken, Japan (Mr. T. Wake) (sold).
Kamloops trout.	20,000	Eggs.....	Lloyds Creek hatchery.	Ewings hatchery, B. C. (sold).
Kamloops trout.	30,000	Eggs.....	Lloyds Creek hatchery.	Sunnyside hatchery, B.C. (sold).
Kamloops trout.	25,000	Eggs.....	Penask Subhatchery....	Sunnyside hatchery, B.C. (sold).
Kamloops trout.	75,000	Eggs.....	Lloyds Creek hatchery.	Cranbrook Trout Club hatchery, B.C., in exchange for Cutthroat trout.
Kamloops trout.	50,000	Eggs.....	Nelson hatchery.....	Cranbrook Trout club hatchery, B.C., in exchange for Cutthroat trout.
Speckled trout..	230	Fry.....	Bedford hatchery.....	Biological Board, Professor Gowanloch (donated).
Sockeye salmon.	3,060	Eggs.....	Cultus Lake hatchery..	University of British Columbia, Mr. Pillsbury (donated).
Sockeye salmon.	525,000	Eggs.....	Cultus Lake hatchery..	Biological Board, Dr.Foerster (donated)

In the interest of economy and convenience in the distribution of fry the following transfers of eyed eggs were made in 1929:—

Species	From	To	Number
Atlantic salmon.....	(a) Bedford hatchery.....	Antigonish hatchery.....	500,000
	(a) Margaree hatchery.....	Lindloff hatchery.....	300,000
	(a) Middleton hatchery.....	Windsor hatchery.....	4,000
	(a) Florenceville hatchery.....	Miramichi hatchery.....	500,000
	(a) Florenceville hatchery.....	Yarmouth hatchery.....	250,000
	(a) Grand Falls hatchery.....	Tobique hatchery.....	500,000
	(a) Grand Falls hatchery.....	Yarmouth hatchery.....	500,000
	(a) Restigouche hatchery.....	Nipisiquit hatchery.....	401,192
	(a) St. John hatchery.....	Yarmouth hatchery.....	500,000
	(a) Kelly's Pond hatchery.....	Antigonish hatchery.....	250,000
Speckled trout.....	(a) Middleton hatchery.....	Windsor hatchery.....	6,700
	(a) St. John hatchery.....	Antigonish hatchery.....	10,000
	(a) St. John hatchery.....	Yarmouth hatchery.....	10,000
	(a) Nelson hatchery.....	Summerland hatchery.....	107,500
Whitefish.....	(a) Fort Qu'Appelle hatchery.....	Summerland hatchery.....	5,000,000
Pickereel.....	(b) Fort Qu'Appelle hatchery.....	Banff hatchery.....	1,360,000
Rainbow trout.....	(b) St. John hatchery.....	Kelly's Pond hatchery.....	18,792
	(c) Banff hatchery.....	Jasper Park hatchery.....	50,000
Salmon trout.....	(b) Cold Lake camp.....	Banff hatchery.....	44,540
Kamloops trout.....	(b) Gerrard hatchery.....	Nelson hatchery.....	500,000
	(b) Lloyds creek hatchery.....	Lakelse lake hatchery.....	125,000
	(b) Lloyds creek hatchery.....	Nelson hatchery.....	75,000
	(b) Lloyds creek hatchery.....	Pemberton hatchery.....	30,000
	(b) Penask lake.....	Cowichan Lake hatchery.....	2,000
	(b) Penask lake.....	Pemberton hatchery.....	25,000
	(b) Penask lake.....	Summerland hatchery.....	464,855
Sockeye salmon.....	(a) Cultus Lake hatchery.....	Harrison Lake hatchery.....	7,602,400
	(a) Cultus Lake hatchery.....	Pemberton hatchery.....	1,001,000
Steelhead salmon.....	(b) Cowichan Lake hatchery.....	Cultus Lake hatchery.....	25,000

(a) 1928 fall collection.

(b) 1929 collection.

(c) These were purchased from S. S. Drew, Troy, Montana, and laid down at Banff hatchery May, 1929, then shipped on to Jasper Park hatchery.

The following marking of salmon was done in 1929:—

—	Species	Number marked	Date of marking	Nature of mark	Object—To throw some light on
River Philip, N.S.....	Atlantic salmon, stripped....	247	Nov. 1, 6, 9, 11, 12, 16 and 19	Silver tag attached to dorsal fin.	The direction (easterly or westerly) that these fish take when they go to sea and the direction (easterly or westerly) from which they come when they return to this river.
Allen's lake, N.S.....	" "	21	Oct. 18, 21, 22, 25, 27, Nov. 5, Dec. 13	" "	The movement of the salmon that resort to this river to spawn.
Tabusintac river, N.B.....	" "	2	May 26, 1929.....	" "	"
Kelly's Pond hatchery— Morell river .....	" stripped.....	137	Nov. 26, 27, 28.....	" "	"
Babine lake hatchery— Morrison creek.....	Sockeye salmon fingerlings..	1,045	Aug. 16, 18.....	Removal of adipose fin.....	The frequency of spawning and extent to which late fish of any season return as late fish.
Stuart lake hatchery— Alexander lake.....	Sockeye salmon yearlings....	3,100	May 14, 15.....	Clipping the adipose fin and the posterior half of the dorsal fin.	The percentage of artificially fed fry that return as adult salmon.
Rainbow lake.....	" "	1,000	May 6, 8.....	" "	" "

## APPENDIX No. 4

## REPORT OF C. BRUCE, A.M.E.I.C., FISHERIES ENGINEER

## CLEARING RIVERS AND BUILDING FISHWAYS

As indicated in the previous report the development of hydro-electric power, involving the construction of dams of much greater heights than was formerly the case, is assuming larger proportions, and is presenting many problems in connection with the provision for the ascent of fish as well as the adequate protection for their descent to the sea.

While efficient fishways have been provided for such developments as have been completed up to the present, where their provision has been considered necessary, it may be that with the construction of some of the major developments which now appear to be pending and which in some instances involve dams of heights of upwards of from 100 to even over 300 feet, situations will be met with in which it may not be feasible to devise efficient fishways. Even provided that fishways in such developments are found to be feasible, consideration will need to be given to several factors among which may be mentioned:—

- (1) Provision for the descent of seaward migrants.
- (2) The possibility that, due to the altered conditions above the dam by the flooding of areas which previously provided spawning grounds, these may to a great extent be eliminated.
- (3) The possibility that the expenditure for the provision of a means for the passage of fish may greatly exceed the value of the fishery.

With the modern power development the necessity for a uniform flow of water, in order that the plant may be operated at full capacity throughout the year, has led to the provision of storage whereby the freshet waters are held and let down as required. There is, except during heavy freshets, usually little if any discharge from the power dam, with the exception of the water passing through the turbines. Under these conditions the chances for seaward migrating fish passing the dam uninjured are greatly reduced, particularly in the case of the young ones. Screens, to prevent their entrance into the turbines, have been tried, but without marked success, owing to debris collecting on the screen surfaces. In one instance at least it was found as well that the screens were causing considerable loss from the young fish being drawn against them and injured. Some experimental work has been carried out with what are known as electric screens, the purpose of which is to electrify a field extending across the opening to be screened. While these screens have been developed with some success for smaller channels, their efficiency in the large forebays of power developments has not as yet reached a stage where their adoption can be considered.

The removal of obstructions to the ascent of migratory fishes in streams and rivers was carried on throughout the year as occasion demanded.

The following works were undertaken in connection with building fishways and clearing rivers:—

## NOVA SCOTIA

*Medway River, Queens County.*—The approach to the fishway in the dam at Salters falls was repaired with stone and concrete.

*Gold and Middle Rivers, Lunenburg County.*—The beds of these rivers for several hundred yards above the mouth are flat in contour and strewn with

boulders. It was found that during lower stages of water salmon were unable to ascend owing to the flow being spread out and broken up. Boulders were removed for a width of approximately six feet, extending through these areas, thus providing continuous, unobstructed channels in which the flow of water was concentrated, thereby facilitating the passage of fish.

*La Have River, Lunenburg County.*—The fishways at Bridgewater were inspected. Arrangements were made with the owner of the DeLong dam on the North branch to improve the fishway. A channel was opened up around the end of a small dam on the same branch to provide a fishway.

*Petite Riviere, Lunenburg County.*—The channel of the river below the fishway, in the Conquerall Mills dam, leading thereto, was deepened, and some improvement made to the fishway itself, to facilitate the ascent of alewives.

*Mersey River, Queens County.*—Inspections were made of the three power developments under construction by the Nova Scotia Power Commission, and the question of the advisability of requiring fishways therein carefully gone into. After due consideration, the department decided that for the present, and until conditions created by the dams could be studied and definite knowledge of the effect which they will have on the fishery obtained, a fishway would be required in the lowest dam only, there being several tributary streams between this and the next dam above which may provide spawning grounds. Designs were prepared by the engineers and the fishway therefrom was subsequently built by the Power Commission. This fishway overcomes a vertical height of fifty-nine feet, and is over eight hundred and fifty feet long. The vertical height overcome is the greatest in which a fishway has, up to the present, been built in Canada.

*Tusket River, Yarmouth County.*—Inspections were made of the power development under construction by the Nova Scotia Power Commission on this river, and designs prepared for fishways both in the diversion dam in the main river, having a height of fifteen feet, and in the intake dam at the power house, having a height of approximately twenty-seven feet. These fishways were subsequently built by the Power Commission, but owing to divergence from the design in the construction of the latter, it will be necessary to require modifications.

*Gasperaux River, Kings County.*—The fishway in the power dam on this river, which overcomes a height of approximately thirty-two feet, had become so rotted that it was necessary for the owners to entirely rebuild it. The original height of this dam was thirty feet, but subsequently this was increased as above stated, with the result that during higher stages of water it was not practical to adjust the inlet of the fishway. Plans of modifications to meet the altered conditions were prepared and incorporated in the new fishway with satisfactory results.

Plans were prepared for fishways in two small storage dams at the outlets of Gasperaux lake and the construction in connection therewith completed.

*Porters Lake, Halifax County.*—A channel was opened through the beach at the outlet of the lake to permit the descent of fish to the sea. Similar channels were opened up at the mouth of Round Bay river, Shelburne county, and at Gasperaux pond, Oyster pond and McInnis pond, in Victoria county.

*Tangier River, Halifax County.*—Inspections were made into conditions for the ascent of salmon and arrangements concluded for the provision of a fishway in a small dam at Mooseland.

*Fish and Moose Rivers, Halifax County.*—Inspections were made of dams on these rivers, and arrangements concluded with the Hollingsworth Whitney Company, Limited, to provide suitable gate openings for the ascent of the fish

in their driving dams on the first named river. Moose river is a smaller tributary of Fish river, and on account of the number of dams it was not considered that for the present fishways should be required. The provision made on Fish river will allow fish to reach suitable spawning grounds.

*Osier River, Halifax County.*—An inspection was made and plans for a fishway to meet altered conditions at the dam owned by Messrs. Hubley and McDonald were prepared. This fishway was subsequently built and proved effective.

In a number of instances where obstructions, consisting of jams formed by accumulations of old logs and rubbish, had formed in streams during freshets, these were removed under the supervision of the inspectors in whose districts they occurred. The following streams received attention: Black brook, McDonald's Lake brook, Loon Lake brook, in Cape Breton county; McNeill's brook, Victoria county; McKinnon's brook, Lake O'Law brook, McLennan's brook, Big Meadow brook, Glen brook and Sky Glen brook in Inverness county. Two rock falls which prevented the ascent of salmon in North river, Victoria county, were blasted to improve conditions.

Screens were erected covering the fishways in dams on river Phillip and South river, to prevent poaching and a screen was placed again this year to prevent the ascent of salmon into the tailrace channel, at the Barrington River woollen mills.

Inspections by the engineers were made of fishways on the Roseway, Jordan, Clyde, Ship Harbour, and Sheet Harbour rivers.

#### NEW BRUNSWICK

*New River, Charlotte County.*—At the Keyhole falls on this river the channel is divided and during low water salmon entering the smaller one become stranded. A small concrete dam was built at the head of this channel to close it off entirely.

Improvements were also made to confine the flow of water in one channel, by blasting, at Crooked falls and Scott's falls.

Long stretches of this river are through thickly wooded country, which makes it difficult for guardians to reach many of the pools in which salmon lie, and where poaching is likely to occur. This condition was much improved by opening up a foot trail along the river.

*Pocologan River, Charlotte County.*—A trail similar to that provided for the New river was opened up along this river to facilitate guardianship.

*Magaguadavic River, Charlotte County.*—The lower end of the fishway at St. George, which overcomes a vertical height of forty feet, was completed during the year.

In addition to the works above stated, the following were undertaken by the engineers:—

Inspection and survey for a fishway on the Magaguadavic river at Flume ridge.

Inspection and survey for a fishway over the falls at the mouth of the Lepreau river.

Inspection and instructions to owners regarding repairs to the fishway at Great Salmon river, St. John county.

Inspection and survey for modifications to fishway at Salmon river, Albert county.

#### MANITOBA

*Red River, St. Andrews Locks.*—Modifications were completed by the Public Works Department to the fishway in this dam, from designs by the fisheries engineer.

*Whitemud River.*—While the fishways previously built in dams on this river at Gladstone and Westbourne were effective in so far as design was concerned, conditions were such below the dams that suckers would not seek the entrances to them except in small numbers. It was accordingly arranged to have large stop-log gates installed in the dams, which can be removed during the short period when these fish are ascending.

*Winnipeg River, Great Falls.*—An inspection was made and data secured in connection with the proposal that a fishway should be installed in the Winnipeg Electric Company dam at this point.

#### BRITISH COLUMBIA

All work in this province is under the direct supervision of Resident Engineer J. McHugh, under whose direction the following waters received attention, embracing the removal of log jams and rock obstructions, which either hindered and delayed the passage of salmon to their spawning grounds, or else entirely prevented such passage: Fraser creek, Carriden Bay creek, Easy creek, Ka-oo-winch river, Yakoun river, Serpentine river, Campbell river, Bulkley river (Moricetown), Penask creek and Oyster river.

In addition to the foregoing, minor obstructions, consisting of accumulated logs and roots, were removed from certain other streams, the work being performed under the direct supervision of the local inspectors. The streams on which these works, mostly performed in remote places, and not requiring engineering advice in their performance, are listed below as follows:—

Capilano river, Atuarko river, Hobartin river, Salmon river, Knouff creek, Doriston creek, Hyacinth creek, Ian river, Justakla creek, Crawford creek, Bear creek, Coal creek, Canoe creek, Bednesti creek, Simpsons creek, Little river, Open Bay creek, Williams creek, Marble creek.

All such minor obstructions are now dealt with in this manner, after reports and recommendations in connection therewith have been submitted to the office of the resident engineer. This method has resulted in a great saving in expenditure and allows the engineers greater freedom for other duties.

*Cowichan River, Skutz Falls.*—Designs were prepared in the Resident Engineer's office for a fishway to overcome the natural obstruction to the ascent of salmon at this falls.

Consideration was also given to the question of providing fishways for high dams which are proposed, both at Stamp falls, on Stamp river, and Shuswap falls, on the Shuswap river. While in the case of the former additional data was secured on the ground, nothing that could be recommended has as yet been developed.

#### FISH CULTURAL ESTABLISHMENTS

*Antigonish Hatchery.*—The entire hatchery property was enclosed with a wire fence, with ornamental concrete gate posts and picket gates. A layout plan was prepared for the improvement of the grounds and considerable work done during the year.

*Bedford Hatchery.*—Designs were prepared for a small rearing pond system at this hatchery, which will, when finally completed, comprise fifteen ponds. During the year three of these were built under direct supervision of an engineer. The dimensions of ponds built are, lengths—29 feet, 31 feet 6 inches and 34 feet 6 inches, the widths of all ponds being 4 feet, and the depth grading from 14 inches at the head, to 15 inches at the foot, with a portion five feet long at the lower ends 21 inches deep to permit cleaning. The system includes a head trough and foot trough, all work being reinforced concrete.

*Yarmouth Hatchery.*—The rearing pond system was extended by the construction of seven ponds, each 150 feet long, 4 feet wide, and  $2\frac{1}{2}$  feet deep. Each

pond is subdivided at thirty-foot intervals in the length by buttress walls, between which screens may be placed as desired to separate the different sections. All work is done with reinforced concrete. A store-house, 20 feet by 24 feet, was built at the back of the garage. The grounds surrounding the hatchery buildings were graded and the general appearance greatly improved.

*Middleton Hatchery.*—The sills and lower ends of the studding in the walls of the hatchery building were renewed.

*St. John Hatchery.*—Four new, reinforced, concrete rearing ponds, each 175 feet long, 4 feet wide, and  $2\frac{1}{2}$  feet deep, were built, and general repairs made to some of the walls of existing ponds. The dwelling was painted, and a new verandah built across the front. The platform in front of the hatchery was renewed with concrete, replacing the old wooden one.

*Margaree Retaining Pond.* The cribwork forming the walls of the pond was renewed, and resheathed. The old work had completely rotted out down to water level.

*Miramichi Hatchery.*—Sanitary plumbing, including bath, basin, closet and hot water boiler, was installed in the dwelling, with a septic tank for sewage disposal. The water supply is obtained from the hatchery creek by a hand-operated pneumatic pressure system.

The old stable, ice-house and coal-house, which had rotted beyond repair were demolished and a new storehouse, 40 feet long and 16 feet wide, built to replace them. This building contains as well an ice-house and feed room. The old store-house was remodelled to provide garage space for the hatchery truck and a coal room.

*Tobique Sub-Hatchery.*—The old water supply dam was replaced by a new one, located seventy-five feet further upstream. The dam is built of cedar logs with plank sheathing.

*Florenceville Hatchery.*—A store-house, 16 feet by 18 feet, was built adjoining the garage building.

A new earthen pond was excavated at the front of the hatchery property, and the existing earthen pond was enlarged and deepened.

Considerable work was done in grading and improving the hatchery grounds, and a new tile drain was laid from the feed room to the creek.

*Kelly's Pond Hatchery.*—The water supply dam was repaired by entirely renewing the waste gate and sluice with heavy timber and sheathing. The supply pipe to the hatchery, which had become badly corroded, was renewed, two 6-inch wood stave pipes installed.

Sanitary plumbing was installed in the dwelling with a septic tank for sewage disposal. As there was no available room, a small ell was built on the back of the building to provide a bathroom. The water supply is obtained by a hand operated pneumatic pressure system.

*Gull Harbour Hatchery.*—Modern, single feed, unit batteries were built to replace the old U-type battery. The new batteries have a capacity of seven hundred and eighty hatching jars. The concrete floors were repaired and resurfaced, and new floor tanks were built.

*Waterton Lakes Hatchery.*—Six rearing ponds, four of which are fifty feet long, one eighty feet long, and one one hundred feet long, were excavated on the sloping ground back of the dwelling. The water supply was obtained by placing a small dam in the hatchery creek, and running a wooden flume 160 feet long. A combination ice-house and double garage, 18 feet by 32 feet, was built, and an office and living room provided in the end of the hatchery building. Considerable improvement was made to the hatchery grounds, and an ornamental stone wall was built along the front of the property.

*Banff Hatchery.*—A rearing pond, approximately one-quarter of an acre in area, was excavated. The water supply, brought in from both glacial and warmer mountain streams, thus providing a measure of temperature control, is controlled by valves.

*Lakelse Lake Hatchery.*—A new spawning fence was constructed at Williams creek, for use in connection with the operations of this hatchery. This construction necessitated the cribbing of the adjoining stream banks for a distance of 375 feet.

*Babine Lake Hatchery.*—A boat house, 16 feet by 36 feet, was built with marine ways 110 feet long, fitted with cradle and capstan to provide for hauling the hatchery boat out for the winter.

*Cowichan Lake Hatchery.*—The dam at the water works intake was reinforced and new spillways constructed thereon.

*Penask Lake Hatchery.*—A new eyeing station was built at Penask lake, consisting of an open building to accommodate five million trout eggs, and a cottage containing a combined living room and dining room, and four bedrooms. The water supply is conveyed to the hatchery by a flume 800 feet in length.

Owing to the isolated location of this station, many difficulties were experienced, particularly in respect to transportation, all material having to be brought in a distance of between fifty and sixty miles over very indifferent roads.

*Cultus Lake Hatchery.*—A survey was made of Sweltzer creek for the purpose of determining the location of certain pools, the construction of which is contemplated for holding salmon below the spawning fences. A new fence and pens were constructed in the creek bed for the purpose of segregating the various runs of fish.

#### INVESTIGATIONS AND SURVEYS

*Malpeque Bay, P.E.I.*—A complete survey of Malpeque bay was made by an engineer of the Topographical Survey, in co-operation with the Fisheries Engineer, for the establishment of areas to be leased for oyster culture. Permanent monuments were established at suitable intervals around the shores of the bay from which the areas may be located.

*Margaree Salmon Pond.*—An examination was made of the waters of Margaree harbour, and surveys conducted for the establishment of a tidal salmon retaining pond.

*Morell River, P.E.I.*—A survey was made of a proposed site for a salmon retaining pond on the Morell river.

*Cochin, Sask.*—Surveys were made of proposed sites for a whitefish and trout hatchery at Cochin, on Jackfish lake, Saskatchewan.

*Fraser River, B.C.*—Under supervision of Resident Engineer McHugh, conditions on the Fraser river at Hell's gate and Bridge River rapids received attention from time to time as occasion demanded. An instrumental survey of the Bridge River canyon is being completed, in order that information may be available in connection with any additional work that may be considered advisable at this point to facilitate the ascent of salmon.

#### GENERAL CONSTRUCTION

*Digby Island, B.C.*—Under supervision of Resident Engineer McHugh, complete plans and specifications were prepared for the construction of marine ways and covered shed, a warehouse measuring 50 feet by 30 feet, with living quarters for watchman, and sheds for the winter housing of nine fisheries patrol boats. The land was obtained from the provincial Government without cost and the above work completed by contract. This construction provides a long-

felt want in the northern district whereby the patrol boats may be drawn out of the water, repaired and painted by the department's own employees. Ample space is provided in the warehouse for the storage of departmental property and confiscated fishing gear.

#### BIOLOGICAL BOARD OF CANADA

*Fisheries Experimental Station, Halifax, N.S.*—Designs were prepared and a contract awarded for the construction of a new station at Kings wharf, Halifax, N.S. The building measures 44 feet by 85 feet, and is three stories high with attic. Accommodation is provided for fish handling, aquarium, fish culture, experimental work, museum, library, offices, lecture room, board room, and laboratories for instruction, biochemical, chemical and bacteriological purposes. The building is reinforced concrete construction, the exterior walls being tile with brick facing. A hot water system is provided for heating, and the building is complete with plumbing and sanitary fixtures on each floor.

*Residence Building, Departure Bay, B.C.*—This building was completed during the early part of the year, under the direct supervision of the resident engineer.

*Biological Building No. 2, Prince Rupert.*—Designs were prepared for a building measuring 36 feet by 80 feet, containing full basement, first and second floors, and attic, in connection with the Fisheries Experimental Station at Prince Rupert, under the supervision of the resident engineer. The basement will contain the heating plant, vault, and refrigerating machinery; the two main floors will be divided off into offices, laboratories, library, workshop, darkroom, etc., while the attic will contain ventilating fans and other miscellaneous equipment. Foundations of the building will call for the excavation of a considerable amount of rock and the entire foundation walls will be of reinforced concrete.

A contract was awarded for a portion of the construction work during the closing stages of the year, and the work is still in progress. Acknowledgment is made of considerable assistance in the preparation of the plans by Mr. O. C. Young, of the staff of the Experimental Station.

*McClinton Creek, Counting Fence.*—A survey of the streams draining into Masset inlet was conducted, with a view to determining the creek most suitable for the initial investigation into the life history of the pink salmon. McClinton creek was chosen, and the necessary data procured for the construction of a counting fence along similar lines to that at Cultus lake. Plans of the fence, as well as those for the necessary buildings to accommodate the workers, were prepared.

*Piper's Lagoon.*—Plans were prepared for a combined dam and fence to be installed at Piper's lagoon, in the vicinity of Departure bay, B.C., for the purpose of retaining young salmon in sea water.

#### GENERAL

Various plans and maps, in connection with fisheries work, were completed during the year, both at headquarters and in the British Columbia office, where the district maps in particular were kept up to date by the addition of material and information furnished by the local inspectors from time to time.

The Engineering Branch also arranged for setting up aquaria in which live fish were shown at the Fishermen's Exhibition at Lunenburg and at the Yarmouth Exhibition.

An inspection was made by Engineer McHugh during the year of certain counting fences in the streams of southern Alaska for the purpose of procuring information on the current practice with regard to such work.

## APPENDIX No. 5

## SCALLOP INVESTIGATIONS IN 1929

REPORT OF INVESTIGATIONS BY SS. "MADELINE A" OFF SHELBURNE AND QUEENS COUNTIES, NOVA SCOTIA

*By H. S. LeBlanc, Observer*

Shelburne county investigations were carried out during July, August, and September in and about Green harbour and bay; Jordan river and bay; Cape Negro harbour, both sides of the channel well up to the entrance of Port Clyde; Shelburne harbour and bays; Ragged islands and bays; Sable river and bay; and the offshore grounds from Shelburne, Lockeport and as far east as Port LeHebert.

The best results on these grounds were obtained at Cape Negro harbour, well up to the entrance of Port Clyde, and close in to the shore of what is known as Northwest harbour. Some scallops were also found in the Western passage. The bottom there is very rough and the water shallow.

At Port LeHebert scallops were dragged up along practically the whole length of the harbour.

At Shelburne, some scallops were found on the west side of the harbour close to Hart point and near the entrance to the channel leading to Birchtown.

The scallops found at Cape Negro, Shelburne and Port LeHebert were of good size. These areas would seem to be fairly good grounds for the fishermen to try.

On the offshore grounds off Shelburne, Lockeport, and as far east as Port LeHebert, no scallops of any size could be located—only very small sized scallops as were found last year off Shelburne. These scallops do not appear to grow any larger, unless growth occurs on some other grounds that the investigation could not discover.

## QUEENS COUNTY

Queens county investigations were carried on during October and November on the offshore grounds from Port LeHebert to Port Medway and also in the following bays and harbours: Port Joli, Joli Point, Port Mouton, Western and Eastern channels; White Point; Eastern Head; Eagle bay; Coffin Island; Hill bay; Gull bay; and Port Medway harbour.

No indications of scallops could be found on the offshore grounds and bays. It does not seem that the right kind of bottom can be found on these grounds as at every place where draggings were made, only very clean, small rocks would be brought up.

At Port Mouton harbour, both western and eastern channels, the draggings brought up some large scallops. Some very large sized scallops were also found at Port Medway, but it does not appear that either at Port Medway or Port Mouton can enough be found to make operations profitable. At both harbours, the bottom is very rough and the channels narrow so that it was difficult to make draggings with a boat the size of the *Madeline A*.

REPORT OF INVESTIGATIONS BY SS. "ALBERTON" IN WATERS OFF PRINCE EDWARD ISLAND

*By Captain S. A. Young, Observer*

The scallop investigations of 1929, off Prince Edward Island, were carried on from July 18 until November 29, and fell into three divisions:—

(1) Exploratory work in locating scallop areas in the St. Lawrence off the northeast and east coast of Prince county;

(2) Investigations in the northeast extremity of Northumberland strait, off the coast of Miminegash, Prince county;

(3) Exploratory work in locating areas in Northumberland strait off Charlottetown, Wood island, Murray harbour, and Georgetown, Queens and Kings counties.

All told, draggings totalling 233,610 yards were carried on, yielding 5,265 scallops. The operations by areas were as follow:—

—	Yards	Scallops
Alberton and Malpeque.....	120,810	3,662
Miminegash.....	18,600	45
Charlottetown.....	30,900	527
Wood Island.....	15,300	166
Murray Harbour.....	26,700	329
Georgetown.....	21,300	536
	233,610	5,265

The sea bed, in general, off the coast of Prince Edward Island, where exploratory work was engaged in, consisted almost entirely of loose rocks and rock ledges until reaching a depth of about 11 fathoms, when it was found to take on the nature of red sandstone, in some cases making a composition of sand, gravel, shell rock and mud. On the whole there was the form of sea bed on which scallops will exist and thrive.

In the work of investigation it was found that a large number of scallops had recently died. This was most noticeable in the Northumberland strait areas. There was every indication that scallops had become so numerous through lack of fishing that the older ones, reaching the end of their natural life, died and in their decomposed state created a germ which was injurious to the younger scallops.

Scallop bivalves will collect spat for a period of one year in these areas; after that time, they collect a coating known as "marine growth" which helps to decay the valves; the valves decaying, produce an obnoxious odour that has a tendency to attract starfish, helix snail and other fish of similar species. After this has continued for about three years the scallop valves are completely demolished. Instances of this kind have been noted in Mahone bay waters, where scallop valves were put into shallow depths; the starfish, sea urchins, and sand dollars would find these places congenial haunts until the valves were completely decayed.

In the scallop areas off Wood island, Murray harbour, and Georgetown, the investigations revealed indications that the scallops were coming back in goodly numbers. A quantity of very small scallops was found among the empty bivalves.

#### THE PHENOMENON OF SPAWNING

Scallops were examined carefully from August 31 to September 7 and out of the collection obtained in the draggings only 2 had been in a state of spawning. There were indications that the remainder would carry well on until the middle of September. Scallops were also examined carefully from September 28 to October 5, and it was found that a few carry over in the early days of October. By October 5 the scallops were completely through spawning.

Over the entire sea bed, spawning set in, as stated in Mr. Andrew Halkett's former report, about September 17 and by the 28th spawning was apparently over. In Mahone bay waters, the spawning period is the same as in the Prince Edward Island area.

## MURRAY HARBOUR AREA

Draggings were carried on in the Murray harbour area in the period from November 4 to November 13. Thirty draggings were made—each of them 900 yards, with one exception—yielding a total of 329 scallops.

It was found that the sea bed off the Murray harbour coast comprises large areas of rock and shell rock ledges until a depth of 11 fathoms is reached. Seaward beyond that depth, the bottom is evenly balanced areas of gravel, sand, clay and mud, with small areas of broken bottom, including rock and shell rock. On this vast area, scallops had died in numerous quantities but indications were that there should be quite an improvement in this region in the next few years.

## GEORGETOWN AREA, CARDIGAN BAY

Draggings totalling 21,300 yards in the Georgetown area from November 14 to November 27, brought up 536 scallops.

Off the coast of Georgetown the sea bed consisted of a rock and mud area extending outward until a depth of about 11 fathoms was reached. From this depth seaward as far as observation work was engaged in, the sea bed was practically of the same kind as in the Murray harbour area, consisting of large stretches of sand and gravel, with a mixture of black quahaug and other mollusc valves. Small areas of rock and mud were also found mixed with this form of sea bed. Though a considerable percentage of scallops in this area had died recently enough were found to have survived to continue production in commercial quantities.

The living scallops and the empty, unhinged bivalves were of a smaller run than those obtained off Murray harbour or Wood island; there were few scallops in this area that would exceed 5 inches. They were of a very even run, measuring from 3 to 4 inches and were of a clean nature. Scallops that had died in this area averaged about 75 per cent and what would be classed as small. The investigations indicated that fishing is the only course to take to prevent scallops dying every few years.

## ALBERTON, HARDY'S CHANNEL, AND MALPEQUE AREAS

The exploratory work in the Alberton, Hardy's channel, and Malpeque areas was a continuation of that formerly carried on by Mr. Andrew Halkett. Beginning at the point where Mr. Halkett's exploration had finished, the investigation proceeded along the sea coast in a southeast direction toward East point. The method adopted in dragging was practically the same as that employed by Mr. Halkett. All told, the draggings totalled 120,810 yards, and 3,662 scallops were obtained.

In measurement, the scallops found were not as large as those in Mahone bay waters but when shelled, the mussel of a 4-inch scallop was about the size of a 5-inch scallop in the Mahone bay area. Being of a more even run, the scallops in this region shelled out approximately on the same average as those obtained in Mahone bay waters.

The sea bed off the Alberton coast, where exploratory work was engaged in, was found to consist of large areas of loose rocks and rock ledges extending seaward to 8 and 10 fathoms. Beyond that depth, the seabed took on the form of sand with intervals of loose stones, gravel and shell banks, and small mud and clay areas. The scallops, spread practically all over the sea bed, were found in large quantities on sand and stone bottom, but it was noted that where the large shell banks existed scallops were most plentiful. There, after spawning has been over for some time, young scallops attached to the interior of black quahaug and giant clam shells can be found in every dragging. These valves seem to stay on the sea bed for years in a perfectly clean

state and scallops thrive around the shallow banks. It was also found that scallops were plentiful where gray gravel banks existed. They are also sometimes obtained near mud banks, where the banks gradually fall off and take on the nature of a fine sand. The common buckie, known to fishermen as the helix snail, thrives in these mud areas and are apparently more destructive to the scallops than the five rayed starfish.

It was noted in the exploratory work that the mud areas off the Alberton district are much unlike those in Mahone bay waters. In Mahone bay, the mud consists of a mixture of heavy grey clay with sand, whereas off the Alberton coast, it is almost a muck.

Through almost all the draggings a large number of empty unhinged scallop bivalves was among the scallops, destruction having been caused by five rayed starfish and the common buckie. Fishermen reported that in certain spots they obtain in each dragging quite a number of scallops in a partially decomposed state, and the investigation revealed numerous cases in which the mussel of the scallop had been partly eaten away. Empty scallop bivalves brought up were of clean appearance indicating that the scallops had died or had been killed recently. Examinations and study pointed to the common buckie as the cause of the destruction. In many cases, one, two or three of these buckies were inside the bivalves of the scallops, which were still living, but had small holes eaten in the mussels. The outer portion of such scallops would be in a perfectly normal condition, so that apparently the buckies feed directly on the mussel.

Areas where the Alberton scallop boats had been fishing and when the beds had been dragged clean and the large scallops caught up, were found to be covered with numerous small scallops from two to three inches. It would appear that dragging and cleaning the sea bed makes it more suitable for scallop growth. Areas that had been fished out two years previously were completely covered with young scallops and the beds extended over a much larger area than formerly.

Almost all the scallops obtained in draggings off Goose harbour were large sized with large sponges attached to the deep valve. The small scallops obtained in these draggings were free from sponges. The scallops with sponges attached were practically as far advanced towards spawning as those in other areas off the coast, and were equally healthy.

Off Hardy's channel the sea bed was found to consist of a fine sand out to a depth of 7 fathoms. From that depth out to 15 or 15½ fathoms were large ridges of rock and shell rock ledges with small areas of sand. Some scallops were obtainable in these sand areas, but the indications were that scallop fishing could not be worked up to a paying proposition until fishing boats were beyond 15 fathom depth. From 15 fathoms outward the sea bed was well suited to scallops, which were present in fair quantity.

The sea bed extending southward from Hardy's channel to Hog island in the entrance of Malpeque harbour was found to be practically the same as off Hardy channel—rock ridges and shell rock ledges. This form of sea bed extended seaward to 13 fathoms. Scallops obtained in this area were generally of a small order, clean, and about two years of age.

Rock and shell ledges were found to extend off Malpeque harbour from 7 to 14 fathoms, with small areas of sand and mud. In these areas the sea bed was covered with starfish, snails, etc. Few scallops existed here. Extending seaward from the 14-fathom depth the bottom was good and evenly balanced. There were indications that the accumulation of scallops off Malpeque harbour was just beginning. Where the observation work ended, south of Malpeque harbour, it was noted that the sea bed was beginning to take on a more evenly balanced nature. Extending east southeast toward Cape Tryon there appeared to be a much larger scallop area with less rock and rock ledges.

## MIMINEGASH

Exploratory work off the northwest coast of Prince county was carried on over part of the area formerly covered by Mr. Andrew Halkett, and the prime purpose was to ascertain the truth of reports that scallops were dead in areas off Miminegash. The length of the draggings totalled 18,600 yards, and in these areas the scallops have died in large numbers since exploration was engaged in by Mr. Halkett in 1927, information obtained indicating that the scallops died shortly after spawning in September, 1928. The rapidity of the destruction and the number of scallops destroyed indicated that some destructive factor other than the buckie and starfish had been at work. There was apparently support for the view that the scallops having become too numerous, and the beds not being worked by the fishermen, a large percentage of the scallops, having lived through their natural life, died and from their decomposed condition a germ resulted that was injurious to the younger run. Most of the scallops that had survived were nearly in spawning condition and some of the 1929 spawning had developed.

The sea bed in this area was found excellently suited for scallops, and the healthy condition of the young scallops was regarded as an indication that satisfactory multiplication was beginning again.

## CHARLOTTETOWN HARBOUR AND AREAS

In the Charlottetown harbour region very satisfactory signs were found of scallops existing at the entrance of Elliott river and inside the entrance. The sea bed in this territory appeared to be very suitable. Scallops that were examined were small and apparently old, but were perfectly healthy, and there was no apparent reason why multiplication should not take place.

Charlottetown harbour scallops were of fair size and in fair abundance, existing all over the sea bed. The draggings indicated the presence of scallops in commercial quantities, but since the area of sea bed is comparatively small it seemed doubtful if the industry would stand much of a strain through continual fishing.

Off Charlottetown harbour the sea bed, where exploratory work was engaged in, was found to consist of a soft mud where scallops would not thrive. Where draggings were made off St. Peter's island, the sea bed was a rock area until a depth of 5 or 7 fathoms had been reached. Seaward beyond that the sea bed took on suddenly the form of mud and muck.

## WOOD ISLAND OR SOUTH POINT AREA

Some scallops were found in the Wood island or South point area and in a perfectly healthy condition. The large number of empty scallop bivalves and scallop valves that were brought up in every dragging indicated that scallops must have been present in numerous quantities some few years ago. The clean condition of the empty bivalves and valves indicated that the scallops must have died very recently. After the dead valves have decayed and the sea bed has become clean, it may be expected that the scallops will multiply rapidly in this area.

The sea bed off Wood island was found to consist of a rock area extending outward to 5 and 9 fathoms, with small areas of sand and mud. Beyond the 9-fathom mark, as far seaward as exploratory work was engaged in, the bottom was ascertained to be of a nature excellently suited for scallops.

## APPENDIX No. 6

## SUMMARY OF OYSTER INVESTIGATIONS IN 1929

*By A. W. H. Needler*

Oyster investigation work in Prince Edward Island was commenced on June 15. The first two weeks were spent chiefly in exploratory work, Bideford river being selected as the most promising river for the following reasons:—

1. Bideford river is part of the Malpeque Bay area which was formerly the most productive river of the Canadian oyster industry, and is the most likely to be leased for cultivation.

2. Bideford river and Grand river are the only two areas in the Malpeque region where there is any considerable quantity of oysters, and Bideford river itself has many more than Grand river.

3. Bideford river is as close as Grand river to Curtain island and the outer oyster areas in Malpeque bay and is closer to the open gulf.

4. Bideford river is close to a railway station (two miles) and only ten miles from oyster areas on the south shore of the island.

5. Bideford river has a variety of water conditions and various small creeks suitable for complete and detailed records of the hydrography, oyster food, oyster enemies, etc.

## OBSERVATION OF SPAWNING AND DISTRIBUTION OF SPAT

As soon as a decision was reached to concentrate in the Bideford area arrangements were made to place about 750 bushels of clean shells in galvanized wire baskets, to make observations of the temperatures, and to observe the oysters themselves. Owing to delays it was not possible to have the regular or complete series of the temperatures at the time of spawning, which took place about July 15 at the head of Bideford river; that is, when the temperature reached approximately 20 to 22 degrees Centigrade. The spat was first observed in the shells on August 7. Plankton nets were not available until too late to find larvæ, but observation suggests that from two to three weeks approximately is the time occupied in the free larval stage. The cultch was put out in the period from July 25 to July 30. More spat continued to appear until about August 20. After that date none was observed in the early fixed stages.

It was found that spat appeared on the clean shells everywhere in the upper two miles in Bideford river. The concentration was greatest from one to two feet below an ordinary low tide, decreasing to zero just above an ordinary low tide and to one-quarter or one-half the maximum in fifteen feet.

The clean shells showed as many as forty to one mussel shells when none could be found on adjacent "natural" shells. The cultch used consisted of 500 bushels of mussel shells which had been ashore for two years and 250 bushels oyster shells which had been ashore for two weeks; the "natural" shells had not been moved. It was found that very little difference existed between sets on the mussel shells and on the oyster shells, but that on the former the spat did not penetrate at all into the centre of the bags (12 inches in diameter), while in the latter case even the innermost shells had a good set.

## PREPARATION OF STOCK FOR EXPERIMENTAL PURPOSES

Two small beds were cleaned and sixty barrels of large oysters planted upon them at a density of about 1,500 bushels to an acre. The beds will be observed further next year. About half of the spat obtained this summer was planted thickly on clean beds, the remainder was left in situ.

## HYDROGRAPHY

Regular temperatures and water samples were taken in the Bideford area throughout the season and several expeditions were made to the outer parts of Malpeque bay. In addition some data were collected at Percival river on the south shore, the East river (Hillsboro river), at Charlottetown, and at Savage harbour. This material showed that the water reached a temperature of 70° F. everywhere in the areas examined and mounted as high as 85° F. at the heads of the creeks in Bideford river.

A large number of observations were accumulated on the distribution of oysters of various sizes in Bideford river and elsewhere in the Malpeque area, at Percival river and in Hillsboro river. Observations were also made on other subjects concerning the oyster including the presence of starfish, and a start was made at taking plankton samples.

## SPECIAL WORK FOR FISHERIES DEPARTMENT

At the request of the Department of Fisheries a brief investigation was made as to the possibility of restocking Savage harbour. The bottom was found to be suitable and in so far as could be determined the hydrographic conditions were found promising.

A preliminary investigation was made of a supposed recurrence of the "disease" of 1914-15 on a bed in Grand river. Observations were made on the occurrence of certain small yellow spots on the mantle—apparently abnormal and material was preserved for microscopic examination.

In addition to the time devoted to the work outlined above, a great deal of time was spent in the preparation of equipment, in general enquiries into fishing methods, distribution of oysters, enemies of oysters, etc., and in general exploration of the region with a view to further prosecution of the investigation in the future.

STATEMENT SHOWING THE ANNUAL EXPENDITURE ON ACCOUNT OF MARINE.  
POLICE SERVICE ON THE ATLANTIC COASTS OF CANADA FOR PATROLLING  
THE TERRITORIAL FISHERIES 1870-1874 INCLUSIVE

1870.....	\$	
1871.....	73,550 86	
1872.....	50,123 24	
1873.....	53,794 90	
1874.....	15,364 69	
		192,833 69

During the period 1875 to 1885, inclusive, the Washington Treaty, which gave United States fishermen the use of Canadian Inshore fisheries, was in force.

On the expiry of the Fishery Articles of the Treaty of Washington, the present Fisheries Protection Service was organized in 1886. The following is a statement of the annual expenditure on such account from 1886 to 1929-30 inclusive.

## FISHERIES PROTECTION SERVICE

In addition to Cruisers, entered under Ontario, Quebec and British Columbia:—

1886.....	\$	104,020 98	1897.....	\$	71,349 44
1887.....	86,300 74	1898.....	78,097 10		
1888.....	59,869 47	1899.....	68,330 27		
1889.....	47,748 94	1900.....	66,148 97		
1890.....	51,296 34	1901.....	96,648 26		
1891.....	81,918 99	1902.....	75,942 24		
1892.....	84,305 51	1903.....	75,543 60		
1893.....	60,269 69	1904.....	103,427 32		
1894.....	70,501 71	1905.....	294,440 34		
1895.....	61,310 19	1906.....	136,432 61		
1896.....	64,064 00	1907.....	99,015 07		

(No proper division of the expenditure of these roving Cruisers could be made between the Maritime Provinces, although *pro rata* shares are fairly chargeable to N.S., N.B., and P.E.I.)

1908-09.....	\$	114,923 00	1918-19.....	\$	56,256 78
1909-10.....	113,582 23	1919-20.....	218,143 93		
1910-11.....	116,235 21	1920-21.....	227,159 57		
1911-12.....	120,240 00	1921-22.....	172,003 39		
1912-13.....	163,370 19	1922-23.....	107,658 85		
1913-14.....	225,113 26	1923-24.....	95,332 27		
1914-15.....	95,702 02	1924-25.....	95,714 47		
1915-16.....	102,637 16	1925-26.....	98,060 10		
1916-17.....	132,393 60	1926-27.....	113,804 14		
1917-18.....	118,824 16	1927-28.....	125,015 62		
		1928-29.....	125,920 64		
		1929-30.....	173,213 75		

\$ 5,041,120 11

A *pro-rata* share of this amount is chargeable to the Provinces of N.S., N.B., and P.E.I.

## STATEMENT SHOWING THE ANNUAL EXPENDITURE OF AND REVENUE COLLECTED BY THE DOMINION GOVERNMENT ON ACCOUNT OF THE FISHERIES SERVICE SINCE CONFEDERATION.

## APPENDIX No. 11

## LICENCES ISSUED

The following is a statement of the different kinds of licences issued by the different supervisors, during the 1929-30 season:—

## MAGDALEN ISLANDS, QUEBEC—SUPERVISOR S. T. GALLANT

Kind of Licences	Number of Licences Issued
Lobster fishing licences.....	659
Lobster packing licences.....	14
Lobster packing extensions—17	
Fish cannery licences.....	1
Reduction works licences.....	1
Certificates under section 66—4	
Herring seine licences.....	20
Herring trap-net licences.....	25 (7 cod trap-nets)
Smelt bag-net licences.....	42 (2 box-nets)
Smelt gill-net licences.....	223 (1 spoiled)
	985 (7 cod trap-nets, 2 box-nets, 1 spoiled)

## PRINCE EDWARD ISLAND—SUPERVISOR S. T. GALLANT

Lobster fishing licences.....	1,640 (3 cancelled)
Lobster packing licences.....	88
Lobster packing extensions—66	
Oyster fishery licences.....	243
Quahaug fishery licences.....	18
Fish cannery licences.....	19
Reduction works licences.....	Nil
Certificates under section 66—4	
Trap-net fishing licences.....	3
Scallop fishery licences.....	Nil
Lobster pound licences.....	1
Smelt bag-net licences.....	263
Smelt gill-net licences.....	349
Oyster lease—1	
	2,624 (3 cancelled)

DOMINION OF CANADA

REPORT

OF THE

POSTMASTER GENERAL

FOR THE

YEAR ENDED MARCH 31

1930

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1930

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,  
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander-in-Chief  
of the Dominion of Canada,*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to forward to your Excellency the accompanying report of the Post Office Department of the Dominion of Canada, for the year ended March 31, 1930, which is respectfully submitted.

I have the honour to be, sir,

Your Excellency's most obedient servant,

ARTHUR SAUVÉ,  
*Postmaster General.*

POST OFFICE DEPARTMENT,  
OTTAWA, August 30, 1930.

“ Alberta.....	62-66
“ British Columbia.....	66-70
In Yukon Territory.....	70
Non-accounting offices, with revenue of each office.....	71-116

# REPORT

## OF THE

# DEPUTY POSTMASTER GENERAL

### 1929-30

POST OFFICE DEPARTMENT,  
OTTAWA, August 20, 1930.

To the Hon. ARTHUR SAUVÉ, M.P.,  
Postmaster General of Canada.

I have the honour to submit the following report of the operations of the Post Office Department for the fiscal year ended March 31, 1930.

#### AIR MAIL SERVICE

The policy of expansion and development of air mail service in Canada was continued during the fiscal year 1929-30, with noteworthy results.

The service between Montreal and Toronto was extended to Detroit via Hamilton, London and Windsor, Ontario, on the 15th of July, 1929, with daily except Sunday frequency. On the same date an additional point of contact with the United States services was afforded, by the establishment of daily except Sunday service from Toronto to Buffalo, N.Y. These services have functioned with marked success, and have not only given rapid mail service to the cities immediately concerned, but have expedited the through movement of mails very considerably.

On the 9th of December, 1929, experimental services between Montreal, St. John and Moncton, and between Moncton and Quebec, were embarked upon. These services have continued to date, demonstrating the practicability of scheduled services over some of the most difficult flying country in Canada.

The most spectacular achievement of the Canadian air mail service, and one which attracted wide attention, was the inauguration, on the 10th of December, 1929, of the air mail route between Fort McMurray, Alberta, and Aklavik, Northwest Territories. This route extends for 1,676 miles down the Athabasca, Slave and Mackenzie rivers to a point nearly three hundred miles beyond the Arctic Circle, and is believed to be the world's "Farthest North" air mail service. The service has operated with remarkable regularity and despatch, in spite of extremely difficult climatic conditions, and has earned the highest encomiums from the inhabitants of the areas which it serves, increasing, as it does, the frequency of service to more than double, and reducing the transit time to considerably less than half.

A further air mail route to Canada's mining districts was inaugurated on the 24th of December, 1929, when a weekly air mail service to the Chibougamau gold mining area in Quebec was established, from Oskelaneo, a station on the Canadian National Railway between Cochrane and Quebec.

The principal development of the fiscal year, however, was the inauguration on the 3rd of March, 1930, of daily air mail service between Winnipeg and

Calgary, via Moose Jaw, Regina and Medicine Hat, with a northern link to Saskatoon, North Battleford and Edmonton. This service expedites the trans-continental movement of mails by a full twenty-four hours, as well as giving fast inter-city communication to the principal centres in the Prairie Provinces.

The Ottawa-Montreal-Rimouski services continued to function usefully throughout the 1929 open season of navigation, and recommenced in the spring of 1930.

The services to the Red Lake and Bissett mining areas have also continued operations with complete success throughout the fiscal year.

During the winter season of 1929-30, the operations of the car ferry between Prince Edward Island and the mainland were hampered considerably by ice conditions in Northumberland Strait, with consequent diminution in the mail service. In the emergency the air mail service rendered valuable aid. From February 10th to April 26th, 1930, a daily except Sunday service between Moncton, Charlottetown and Summerside not only overcame the delays occasioned by the reduction in the ferry service, but expedited the mails materially.

During the year negotiations were carried on also with Great Britain and arrangements made for the use of all air services originating in that country for continental Europe, Asia, Africa, etc.

Similarly, arrangements were made with the United States for air mail connections to all places in Central and South America, and the West Indies, where air mail services are in operation.

Agreements were also reached for the use of the interior air mail services in Australia, the Union of South Africa and Japan.

Great interest was felt in Canada in the long-projected trip of the great British airship R-100 to this country, which voyage finally was accomplished at the close of July, 1930. The reduction of the Atlantic passage to three days brings Great Britain and Europe considerably nearer to this continent. Air mail service in Canada has already assumed a part of major importance in the life of the Canadian people, and, linked up with the trans-oceanic and continental air mail services, as forecast by the successful voyage of the R-100, has clearly before it a still more useful and spectacular future.

#### POSTAL CONGRESS AT LONDON

A Congress of the Universal Postal Union, at which eighty-six countries were represented, met in London, England, early in the summer of 1929, and a report from the Canadian delegates in regard to this Congress is appended hereto.

Canada was one of the fourteen countries that had the honour to be elected to the Executive of the next, or Tenth, Congress, which will meet in Egypt in 1934. This Executive unanimously agreed to meet in Canada in 1933, in preparation for the Congress the following year.

This is the first time in postal history that a British Dominion has been elected to a position on the world's postal executive, and the meeting of the executive in this country in 1933 will also be the first opportunity Canada has had of entertaining an international postal gathering of such importance.

#### LETTER RATES OF POSTAGE

With a view to the further encouragement of correspondence and trade with other countries, our two-cent letter rate, which was extended to all places within the British Empire on Christmas Day, 1928, was also made applicable in May, 1929, to letters for France, and on Christmas Day, 1929, to correspondence for the countries of South America. This rate is therefore now in force from Canada to all parts of the Empire, to North and South America and to France, with considerable advantage to Canadian business.

With the coming into effect of the London Convention of the Universal Postal Union on the first of July, 1930, the rate of postage on letters for all other countries was also reduced, to five cents for the first ounce and three cents for each additional ounce.

#### PARCEL POST, INSURANCE AND C.O.D.

The use of the post office insurance and C.O.D. services by the public continues to increase yearly. Over 5,560,000 parcels were insured in the mails during the past fiscal year, and about 2,100,000 parcels were posted under the C.O.D. arrangement.

Insurance was extended during the year to parcels going by direct service to Italy and to France, and further extensions are under consideration.

The weight limit for parcels going from Canada to China, New Zealand, the British West Indies and most of the countries of Central and South America has been increased to twenty pounds during the past year.

Direct parcel post service has also been established with Brazil.

#### POSTAL ENGINEERING UNIT

The mail handling problem in large city post offices and railroad termini, and the growing use of special equipment, has made the establishment of a special technical division in the Post Office Department necessary in order to obtain proper control and standardization. This unit has been attached to the office of the Deputy Postmaster General, as the work involved affects all concerned throughout the Department. The facilities embracing experimental, consulting and advisory features are thus placed at the disposal of all the branches of the postal service.

The net result during the past year has been a marked improvement in working conditions at the Toronto Postal Terminal, where the mechanical system has had a fair trial. Not only has the mail been handled with greater despatch and security, but the postal worker is benefited by improved methods, as indicated in the following excerpt from a report on the welfare of the postal worker.

1. Brief rest periods are now enjoyed by the men between the different draws of mails. This is very much appreciated, as the nature of this work requires speed, lacks variety and is very much of a repetitional character.

2. Congestion of men around facing-up tables is now eliminated, as the mail is mechanically distributed to the facing-up tables, spaced at distances conducive to good ventilation and ideal working conditions.

3. Lifting of heavy mail bags by the men is greatly lessened, and in many places entirely eliminated, the bags being mechanically conveyed to their destinations, where they are opened. The mail then flows over belts and through chutes to assigned conveying and distributing equipment.

4. Men engaged in separating and sorting are now free from the former dusty atmosphere, associated with the manual dumping of mail bags on the tables, cases and bag racks around which they are engaged.

5. The cycle of night work, during which time the bulk of mail is handled, has been advanced by approximately one hour, this being a progressive step in eliminating as far as possible, midnight labour in large post offices.

6. A reduction has been made possible in the long hours of overtime always associated with the Christmas period, which while willingly borne by the postal employee, nevertheless exacted a toll from which it took considerable time to recuperate. Under present conditions the effect of this peak load has been greatly lessened.

7. Improved working conditions in large city post offices are still engaging the attention of the technical staff, and a machine is being designed for the cleaning of mail bags by a sanitary process. Where necessary, provision will be made for proper fumigation of mail bags and equipment.

Negotiations carried on with the railways resulted during the past year in the maximum use of the facilities available in connection with the new high

level viaduct at Toronto, and it is hoped the coming year will see this work completed and brought into conformity with the industrialized process within the Postal Terminal building.

The same developments are under way at Montreal, where a start is being made towards the establishment of a postal terminal, and negotiations are under way with the railways for their co-operation.

Machines are being built in the Post Office Experimental Workshop for the facing up and primary sorting of letters.

In addition to the above, the new organization is recording time and motion studies, drawing up standards and specifications for post office equipment, testing postage printing machines for accuracy, and generally functioning along pioneer lines that will make for improvements in the service and better working conditions for the postal employee.

### RAILWAY MAIL SERVICE

During the year there has been a marked growth in the volume of mail transported by railways, and new services have been authorized on 476 miles of railroad not heretofore used for mail purposes, as well as additional frequency in service on many of the established railway mail routes, in order to meet the demand for postal service. Mails were carried over 283,596 railway car miles more than the preceding year.

The authorized railway post office services are for 60-foot and 30-foot cars, but a 15-foot postal car service has recently been inaugurated between St. Albans and Montreal, and in accordance with the desire of the railways to reduce the cost of operation on branch lines, it is proposed to operate a 15-foot postal car on all routes where its use will be of advantage to the service. It is estimated that the use of these smaller postal cars will reduce the cost of the mail transportation to some extent and, when superseding baggage car services, provide a much better mail service to the public.

### THREE-CENT BUSINESS REPLY ENVELOPES AND CARDS

In order to facilitate the handling of large mailings, arrangements have been made during the year at the larger post offices whereby firms sending out letters, enquiries and order forms to the Canadian public may enclose an addressed business reply envelope or business reply postcard having printed on the face of the envelope or card the words "Business Reply Envelope (or Business Reply Postcard) 3c postage will be paid by", and the name and address of the firm, and bearing a return postage impression. Under this arrangement the business public are able to enclose a return envelope or return postcard which the sender can mail without the necessity of affixing postage, and on its return, three cents postage is collected. This additional postal facility is being greatly appreciated by the Canadian business public.

### SAVINGS BANK WITHDRAWALS

During the year, the limit for cash withdrawals from Post Office Savings Bank accounts was increased from \$25 to \$50. A depositor may, therefore, obtain cash from his account on demand, up to an amount of \$50 in any one day, on presenting his pass book and providing satisfactory identification.

### POST OFFICE RURAL DIRECTORIES

In the appended statements of the Department's activities during the past fiscal year appears a record of the sale and use of Post Office Rural Directories, which have not been previously mentioned in the report of the Postmaster General.

For many years there was a demand for reliable rural directories to be used for reference purposes and for the compilation of mailing lists. Private lists in use were to a large extent inaccurate, owing to the lack of facilities for obtaining the necessary information. The post office organization lent itself admirably to this work, however, and in the interests of better mailing, as well as with a desire to increase revenue, the preparation and sale of rural directories was commenced. The results obtained have more than justified this step. Not only has departmental revenue increased to a very considerable extent, but in addition the Dead Letter Office has been relieved of the burden of handling a vast quantity of incorrectly addressed circulars formerly received because of the use of inexact mailing lists. This work has been in keeping with the Department's policy of encouraging business in Canada and providing facilities for the extension of trade generally.

During the fiscal year under review, more than six thousand dollars has been realized from the sale of these directories, and upwards of three-quarters of a million dollars revenue has been received as a result of their use. They have proved invaluable to business firms in compiling mailing lists.

#### FINANCIAL POSITION OF THE DEPARTMENT

The financial statement for the year is encouraging, as it shows an increase in gross revenue during the year of \$2,085,029.53. An important item in the increase was the receipt of \$591,661.87 as Canada's share of the proceeds from the sale of the Pacific and West Indian Islands cable systems to the Imperial and International Communications Company.

The expenditure for the year shows an increase of \$1,553,570.77. Of this amount, about \$200,000 was due to statutory increases in salary approved by the Civil Service Commission; about \$350,000 to increase in air mail facilities; about \$150,000 to grade mileage allowances to railway mail clerks as approved by the Civil Service Commission; and the balance to increase in the volume of mail handled and to improvements in general postal facilities afforded the public.

Summarized statements covering the various branches of the Department are appended.

L. J. GABOURY,

*Deputy Postmaster General.*

## THE UNIVERSAL POSTAL CONGRESS AT LONDON

OTTAWA, August 1, 1929.

The Hon. PETER J. VENIOT, LL.D., M.P.,  
Postmaster General of Canada,  
Ottawa, Canada.

SIR,—Having acted, under appointment of the Governor in Council and upon your instructions, as the representatives of Canada at the Ninth Congress of the Universal Postal Union, which was held this year at London, we have the honour to make the following report respecting the proceedings of the Congress.

The opening ceremonies of the Ninth Universal Postal Congress took place in the Royal Gallery of the House of Lords at London on the 10th May, 1929, in the presence of the Prince of Wales, the diplomatic corps and high Government officials. During the ceremonies two addresses of welcome were given, one by Sir William Mitchell-Thomson, Postmaster General of Great Britain, and one by the Prince of Wales. There were present representatives of eighty-six countries and officials of the International Office.

At nine-thirty on the morning of the 13th of May, the Congress met in plenary sitting in Burlington House, Burlington Gardens.

Sir William Mitchell-Thomson, Postmaster General of Great Britain, was present at the opening of the Congress as representing his Government, and at the conclusion of the inaugural address was elected Honorary President of the Congress. Brigadier-General F. H. Williamson, Director of Postal Services in Great Britain, was elected President, and Mr. Garbani-Nerini, Director of the International Office, was elected Vice-President. The President and Vice-President then took their chairs, and after the presidential address the assembly adopted the proposal of the President for the formation of committees to consider and report upon the various proposals submitted to the Congress, there being nearly two thousand proposals to be treated.

There were three committees arranged, the first to deal with the principal Convention and the working regulations thereunder, the second to deal with parcel post and insurance, and the third with money orders, collection orders, newspaper subscription and postal cheque service.

The first committee, which was the only one dealing with subjects which concerned the whole Congress, was the most important, and was made up of representatives of the following countries:—

Algeria.  
Australia.  
Austria.  
Belgium.  
Belgian Congo.  
Bolivia.  
Brazil.  
Bulgaria.  
Canada.  
Chili.  
China.  
Chosen.  
Colombia.  
Cuba.  
Czecho-Slovakia.  
Denmark.

Japan.  
Lettonia.  
Liberia.  
Lithuania.  
Luxembourg.  
Mexico.  
New Zealand.  
Norway.  
Panama Republic.  
Paraguay.  
Persia.  
Peru.  
Philippine Islands.  
Poland.  
Portugal.

Your representatives gave close attention to the work of this committee, as well as the meetings of the full Congress. There were twenty sittings of the first committee, and nine sittings of the full Congress.

Taking up the more important matters in the order in which they were discussed, the first is that of the vote in the Universal Postal Union.

As at previous Congresses, many proposals were submitted with a view to diminishing the votes held by certain countries in the names of their respective colonies. Happily for Canada and the other Dominions, this question was satisfactorily settled in favour of the Dominions at Stockholm, the Dominions as regards their status being on the same footing as any other country. After a long and vigorous discussion, the status quo was maintained.

The introduction of a new category of correspondence, namely, "small packets", was fully discussed by the Congress. This proposal was originally introduced at Madrid, and at each succeeding Congress has received more or less opposition, principally on the ground of its effect on Parcel Post. The proposed inclusion of this new category as "other articles" as regards transit charges was also to some extent opposed. However, both proposals were finally adopted by narrow majorities, on condition that the services should be optional with each country.

Another important matter, all phases of which were fully discussed, was the proposal for a complete reorganization of the method of obtaining transit statistics. It has long been realized that the present methods entail much work and have not given very satisfactory results. It is hoped that the new and simplified method adopted by the London Congress, of utilizing a simple counting arrangement based on average weights, instead of the exact weights of bags, will result in much less work for the statistical offices.

The question of postage rates was widely discussed, but it was the unanimous opinion that the Congress of London should not favour an increase, but on the contrary, should recommend a reduction in international postal rates.

In 1924, at Stockholm, air mail services were discussed for the first time in Congress, but it was felt that they were then in too initial a state to permit of decisive regulations being established. Also at the Hague Conference in 1927 merely a temporary agreement, tentatively outlining regulations to govern air mail services, was drafted. At London it was considered that although there had been great development since Stockholm, it was still too early to make this arrangement absolute for the five years between Congresses. The tentative regulations were therefore incorporated in the Convention, and provision was made for revision by conferences between Congresses.

The work of passing upon the agenda for the London Congress was undertaken by a Preparatory Commission consisting of fourteen representatives of various countries of the world. The work they did was invaluable, and their recommendations had great weight with the Congress. It followed that at London another Preparatory Commission was appointed, to get ready for the next Congress. Canada was one of the fourteen countries, out of the eighty-six represented at the Congress, that had the honour to be elected to membership in the new Preparatory Commission. The membership of this new Commission is as follows:—

Belgium.	Japan.
Canada.	Spain.
France.	Sweden.
Germany.	Switzerland.
Great Britain.	Union of Soviet Socialist Republics.
Holland.	United States of America.
Italy.	Uruguay.

The next Universal Postal Congress will meet in Cairo in 1934, and the Preparatory Commission, which examines and passes on the material for the Congress, unanimously agreed to meet in Canada in 1933. This will be the first time in her history that Canada has entertained such an international postal gathering, and it will be another fifty years before she will have the opportunity of doing so again.

We have the honour to be, sir,

Your obedient servants,

L. J. GABOURY,

*Deputy Postmaster General.*

ARTHUR WEBSTER,

*Secretary, Post Office Department.*

Canadian Delegates.

## NUMBER OF POST OFFICES

STATEMENT showing the number of Post Offices in operation in the Dominion on April 1, 1929, the number of Post Offices established, and the number of Post Offices closed during the year from April 1, 1929, to March 31, 1930, and the number in operation on March 31, 1930.

## RURAL MAIL DELIVERY

During the year the Department has undertaken to deal with all applications for the establishment of Rural Mail Delivery routes received.

A considerable number of additional rural routes has been established during the year and the policy of the Department to provide rural mail delivery service to the more thickly settled rural districts where road and other conditions are favourable will be continued.

## GENERAL FINANCIAL STATEMENT, 1929-30

The net revenue for the year amounted to \$32,969,292.68 and the expenditure to \$35,036,629.27, being an increase of \$1,798,388.37 in the net revenue and an increase of \$1,553,570.77 in the expenditure.

The expenditure for the year exceeded the revenue by \$2,067,336.59. If, however, the Post Office Department had been indemnified for the expenses imposed upon it by the franking privilege enjoyed by the various Departments of Government, the revenue would have been increased by approximately \$950,000, thereby reducing the deficit to the same extent.

## MONEY ORDER TRANSACTIONS

The number of money order offices in operation on March 31, 1930, was 6,209, an increase of 143 over the previous year.

The total number of orders issued during the last year was 17,525,979 as against 17,210,316 for the previous year. The aggregate value was \$197,699,-352.78 as against \$203,129,237.42 for the previous year.

15,259,161 of the orders issued during the year with a value of \$174,285,-024.23 were payable in the Dominion of Canada.

2,266,818, with a value of \$23,414,328.55 were payable abroad.

The number of orders issued abroad and payable in Canada was 885,989 with an aggregate value of \$14,016,240.09.

The number of orders issued in Canada on the United States was 1,562,959 and the value \$14,903,905.27.

The number of orders issued in the United States on Canada was 764,832 and the value \$11,981,012.14.

The following statement shows the number and value of Canadian money orders paid in the United States:—

	Number Year 1929	Amount Year 1929	Number Year 1930	Amount Year 1930
Money Orders.....	1,341,503	\$14,157,949 91	1,562,959	\$14,903,905 27

The average of money orders issued during the year was \$11.28 and the average commission received from the public was 9.64 cents.

## POST OFFICE SAVINGS BANK

The aggregate balance to the credit of depositors on March 31, 1930, was \$26,086,036.03, a decrease during the year of \$2,289,733.71. The average to the credit of each depositor was \$316.47 as compared with \$332.14 on March 31, 1929.

The new accounts opened during the year were 5,781, and 8,786 accounts were closed, leaving the number open at the close of the year 82,428 or a decrease of 3,005.

The deposits were 51,338 in number, for a total amount of \$2,746,049.92. The average amount of each deposit was \$53.71 as compared with \$53.91 for the previous year.

Repayments numbered 51,490 and amounted to \$5,820,365.52, of which 38,366 for a total of \$946,256.60 were made in cash, and 13,124 amounting to \$4,874,108.92 were made by cheque. The average cash repayment was \$24.66 as compared with \$18.75 the year before, and the average withdrawal by cheque was \$371.39, as compared with \$312.64 in the preceding year.

Transfers from the Post Office Savings Bank of the United Kingdom included in deposits) were 215 and amounted to \$78,005.27. Deposits transferred to the Post Office Savings Bank of the United Kingdom (included in repayments by cheque) numbered 43 and amounted to \$21,693.85.

The interest paid to depositors during the year was \$36,918.28, and the interest accrued and made principal was \$747,663.61, making a total of \$784,581.89.

The number of offices authorized to transact business decreased from 1,348 to 1,343.

Claims to moneys of deceased and insane depositors examined into and finally disposed of numbered 670.

STATEMENT (in accordance with the Revised Statutes of Canada, 1927, chapter 15, section 16) of the Post Office Savings Bank transactions for the year ended March 31, 1930, and of the total amount due to depositors on that date.

DOMINION OF CANADA

REPORT  
OF THE  
MINISTER OF PUBLIC WORKS  
ON THE  
WORKS UNDER HIS CONTROL  
FOR THE  
FISCAL YEAR ENDED MARCH 31  
1930

Submitted in Accordance with the Provisions of Chapter 39, Section 34, of the  
Revised Statutes of Canada

OTTAWA  
F. A. ACLAND  
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY  
1931

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,  
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief  
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to lay before Your Excellency the Report of the Department of Public Works of Canada, for the fiscal year ended March 31, 1930.

I have the honour to be, sir,

Your Excellency's most obedient servant,

H. A. STEWART,  
*Minister of Public Works.*

OTTAWA, October 28, 1930.

**REPORT**  
**OF THE**  
**DEPUTY MINISTER OF PUBLIC WORKS**  
**FOR THE**  
**FISCAL YEAR ENDED MARCH 31, 1930**

---

DEPARTMENT OF PUBLIC WORKS, CANADA

OTTAWA, October 20, 1930.

Hon. H. A. STEWART, K.C.,  
 Minister of Public Works,  
 Ottawa, Ont.

SIR,—I have the honour to submit the report of the Department of Public Works for the fiscal year ended March 31, 1930.

EXPENDITURE

The total expenditure incurred by the department during the fiscal year 1929-30 on its various works of construction, maintenance and operation amounted to the sum of \$26,355,856.24.

The details of this outlay may be classified as follows:—

Harbour and river works .....	\$ 7,980,558 10
Dredging, plant, etc. ....	3,310,953 36
Roads and bridges .....	84,494 84
Airports .....	780,144 19
Public buildings .....	12,304,577 80
Telegraphs .....	885,871 14
Miscellaneous .....	260,923 46
Civil government .....	748,333 35
	\$26,355,856 24

As compared with the total for last year, there is an increase of \$5,674,953.79, accounted for mainly by an increase of \$2,750,198.12 for harbours and rivers, \$204,315.25 for dredging, \$45,599.04 for roads and bridges, \$240,067.79 for airports, \$2,401,901.62 for public buildings, and \$24,881.52 for miscellaneous; there is a decrease of \$8,016.87 for telegraphs.

REVENUE

The revenue for the year amounted to the sum of \$663,523.43 and is made up as follows:—

Graving docks .....	\$121,909 54
Rents .....	116,696 58
Telegraphs .....	356,469 26
Casual revenue .....	67,130 05
Ferries .....	1,318 00
	\$663,523 43

As compared with last year, there is an increase of \$23,190.32, comprised chiefly of increases under the headings of graving docks and rents.

## HARBOUR AND RIVER WORKS

The total expenditure in this branch was \$7,980,558.10, which is \$2,750,198.12 more than last year's outlay.

The following is a list of the works which have been completed during the year:—

*Nova Scotia.*—Bridgewater, wharf repairs and reconstruction; Chegoggin Point, breakwater extension; Clarks Harbour, pile wharf construction; Grass Cove, breakwater-wharf construction; Halifax (H.M.C. Dockyard), grading parade ground and reconstruction of wharf No. 5; Little Judique Ponds, breakwater extension; Meteghan, breakwater extension; Peas Brook, wharf construction; Port Maitland, breakwater extension and wave-break; St. Francis Harbour, breakwater-wharf extension; Shag Harbour, breakwater construction; Short Beach, breakwater extension; Sydney, terminal warehouse; Upper Port Latour, wharf repairs and sea-wall.

*Prince Edward Island.*—Charlottetown, extension of east face of Canadian National Railways wharf and construction of freight shed; Hurd's Point, extension of wharf and construction of freight shed; Souris, breakwater repairs; West River Bridge, wharf reconstruction; Westville, wharf construction.

*New Brunswick.*—Brantville, wharf construction; Clair, international bridge substructure construction; Escuminac, breakwater extension; Lameque, pier construction.

*Quebec.*—Bagotville, wharf repairs and improvements; Baie St. Paul (Rivière du Gouffre), protection wall repairs and extension; Douglastown, wharf extension; Grondines, wharf extension; Hudson, wharf construction; Kamouraska, wharf repairs; L'Anse St. Jean, wharf repairs and extension; Les Escoumains, wharf reconstruction; L'Islet, wharf repairs; Louiseville, wharf reconstruction; Matane, west breakwater repairs, and repairs and improvements to landing wharf; Montmagny, wharf repairs; Natashquan, wharf extension; Paspébiac, wharf extension; Petite Rivière Est, breakwater construction; St. Andrews, wharf construction; Ste. Angèle de Laval (Doucet's Landing), wharf reconstruction; St. Etienne de Malbaie, wharf extension; Ste. Famille, wharf repairs; St. Gregoire de Montmorency, revetment wall construction; St. Laurent, wharf repairs; St. Placide, wharf reconstruction; Sorel, improvements to high level wharf and foundation for grain elevator; Varennes, protection wall construction; Verchères, pile breakwater construction.

*Ontario.*—Beaverton, reconstruction of north revetment wall; Burlington, repairs to bascule bridge; Cobourg, reconstruction of southwest breakwater; Goderich, south pier reconstruction, north pier reconstruction and mooring wharf extension across west side of inner harbour; Hamilton, revetment wall repairs; Manitowaning, wharf construction; Port Maitland, repairs to head-block and west pier and shore protection west side; Port Stanley, extension to east sheet pile wall; Sarnia, pile fenders and mooring piles at elevator slip and winter storage basin; Tobermory, wharf reconstruction; Whitby, reconstruction of west entrance pier.

*Manitoba.*—Roseau river, improvements; Winnipeg, wharf construction.

*British Columbia.*—Beaton, wharf reconstruction; Bella Coola, wharf repairs; Campbell river, pile breakwater and float construction; Comox, wharf repairs; Digby Island, construction of breakwater and repairs to float; Esquimalt, alterations and additions to pump house, construction of residences for dockmaster and chief operator, and addition to brick lavatory building; Ginols (West Kootenay), wharf reconstruction; Gray Creek, wharf replacement; Irvine's Landing (Pender Harbour), wharf construction; Jericho, air station, slipway construction; Nicomen Island, bank protection; Ogden Point Piers (Victoria), placing dolphins and floating fender logs, and raising parapet walls

at ends of piers; Okanagan river, construction of control dam; Port Alberni, float extensions; Roberts Creek, wharf extension; Royston, wharf repairs; Steveston, construction of section No. 5 of north jetty and repairs to section No. 4 of north jetty; Union Bay, wharf repairs, William Head (quarantine station), wharf repairs.

The following works under contract were in progress at the end of the fiscal year.

*Nova Scotia.*—Barrington Passage, ice pier No. 4 construction; Brooklyn, breakwater extension; Charles Cove, breakwater extension; Glace Bay, reconstruction of quay wall; West Advocate, breakwater-wharf extension.

*New Brunswick.*—Beaver Harbour, wharf reconstruction; Caissie's Cape, breakwater and pier construction; Kouchibouguac, wharf construction; Seal Cove, breakwater extension; White Head (Gull Cove), breakwater construction; Woodward's Cove, breakwater extension.

*Quebec.*—Anse à Louise, wharf construction; Anse au Griffon, breakwater construction; Anse à Valteau, wharf extension; Bradore Bay, wharf construction; Grande Anse (St. Maurice de l'Echourie), wharf construction; Les Eboulements, wharf repairs; Manicouagan, wharf construction; Méchins (Dalibaire), wharf extension; Paspébiac East, breakwater extension; Petit Cap, breakwater construction; Pointe aux Outardes, wharf construction; Pointe au Pic, wharf repairs; Port Daniel West, breakwater construction; Rivière au Renard, wharf extension; Rivière au Tonnerre, wharf construction; River St. John, protection wall construction; Roberval, wharf repairs and improvements; St. Irénée, wharf reconstruction.

*Ontario.*—Burlington channel, construction of new substructure of Canadian National Railways swing bridge and substructure and roadway approach for additional leaf to highway bascule bridge; Kincardine, north pier repairs; Port Arthur, rubble mound breakwater extension; Port Burwell, harbour improvements; Port Colborne, breakwater repairs; Port Dover, harbour improvements; Port Hope, breakwater and south end of centre pier repairs; Port Maitland, west pier headblock reconstruction; Rondeau, repairs to east pier; Saugeen river (Southampton), repairs to harbour works; Thorah Island, reconstruction of harbour works; Whitby, reconstruction of 506 feet of south breakwater.

*British Columbia.*—Halcyon, wharf construction; Johnson's Landing, wharf reconstruction; Lulu Island, bank protection construction; Mirror Lake, wharf reconstruction; Needles, wharf reconstruction; Prince Rupert, construction of floats.

#### DREDGING

The sum expended under this heading amounted to \$3,310,953.36, which is \$204,315.25 more than last year's outlay.

One dipper dredge (No. 109), two rockbreakers (Lobnitz No. 1 and Lobnitz No. 2), and one small motor launch, for which the department had no further use, were sold.

In British Columbia dredging operations were continued in the Fraser river north arm and main channel, and at other points on this river. The other places at which important dredging was done are Cottonwood Cut, Courtenay river, Graham-Carroll's Crossing, Princess Creek, Sidney, Squamish, Two Beacon Bar, Vancouver, and Victoria.

In Manitoba navigation was maintained on the Red river, at points on Lake Winnipeg and Lake Winnipegosis, and at Selkirk.

In Saskatchewan navigation was improved in Big Stone river and Montreal river.

In Ontario important dredging was done at Amherstburg, Byng Inlet, Cobourg, Eriean, Fort William, Goderich, Hamilton, Kingston, Kingsville, Little Current, Mitchell's Bay, Oshawa, Parry Sound, Port Arthur, Port Burwell, Port Stanley, Prescott, Sandwich, Sarnia, Sault Ste. Marie, St. Lawrence river near Brockville, Thames river, and Toronto.

In Quebec important dredging was done at Beauharnois, Berthierville, Charlemagne, Grand River, Grenville, Grosse Isle, Ile St. Ignace, Ile Madame, Lake Demontigny, Lake Malartic, Lachine, Lavaltrie, Les Escoumains, Magdalen Islands, Matane, Nicolet river, Port Lewis, Repentigny, Rivière du Loup (en bas), Rivière St. François, Saguenay river, Valleyfield, Verchères, Yamachiche river, and Yamaska river.

In New Brunswick important dredging was done at Bathurst, Campbellton, Chatham, Little Lameque, Shippigan, and Whitehead.

In Nova Scotia important dredging was done at Arichat, Brooklyn, Chéticamp, Croft's Cove, Guysborough, La Have Islands, Liverpool, Lockeport, Margaree Harbour, McKay's Point, North Sydney, Petit de Grat, Pictou Landing, Port Beckerton, Port Hood, St. Francis Harbour, Sydney, The Hawk, and Yarmouth.

In Prince Edward Island important dredging was done at Belfast, Charlottetown, East Bideford, Montague, Pinette, and Victoria.

Special reports, to the number of fifty-three, were forwarded to the Department of Marine covering the works of dredging performed during the season, so that mariners might be kept acquainted, by means of alterations to charts and notices to mariners, with the work accomplished.

#### FERRIES

The tolls collected from the thirty licences in force for 1929-30 amount to \$1,318. One new ferry route, namely, Cornwall, Ont., and Massena, New York, was licensed during the year, and a new licence was issued for the Rockcliffe, Ont.-Gatineau Point, P.Q., ferry route.

#### AERODROMES

*St. Hubert.*—The construction of the St. Hubert airport, which was described in last year's report, was continued and practically completed.

During the year the mooring tower was completed and an aqua fuel system to bring the gasoline to the top of the tower installed. The installation of a passenger elevator, mooring winches, heating and pumping equipment, electrical fixtures, etc., was also completed. The construction of aeroplane hangar No. 3 was nearly finished, and heating connections were made with hangar No. 2, where a central heating system was installed. The control and administration building was built and a heating system put in.

A silicol hydrogen generating plant of 40,000 cubic feet per hour capacity, and a gas holder of 50,000 cubic feet, were provided, and a 12-inch hydrogen gas main laid from the generating plant to the mooring tower. The installation of a gas regulator and meters was being made at the end of the year. A house was built for the manager of the airport as well as one for the customs officer. A permanent garage and a radio station were also constructed.

Telephone and electric lines within a radius of 2,100 feet from the mooring tower were placed underground. The installation of an electric lighting system was practically completed at the end of the year. The landing field was levelled, seeded and drained, and a fence constructed around the property of the airport. Permanent roadways, runways and taxiways were built, and the grounds around the buildings cleaned and levelled.

The construction of this first Canadian airship mooring tower is an engineering achievement which is considered as an outstanding work among those of its particular kind in existence. There is therefore every reason to believe that the mooring mast in actual operation will prove to be a successful demonstration of another important accomplishment in Canadian engineering.

*Rimouski.*—During the year minor repairs were made to the wooden aeroplane hangar, new fences built, drain tiles replaced where necessary, and some levelling and filling done.

#### LOWER LAKES TERMINAL

The development of the Lower Lakes Terminal at Prescott was continued. The construction of the grain elevator, which was described in last year's report, was vigorously proceeded with and very favourable progress made. Other work done included the building of a new section of highway, providing trackage and yard facilities, and dredging boat slips.

The following is a detailed report of the progress made during the year:—

*Terminal Grain Elevator.*—The contract entered into with the Thunder Bay Harbour Improvement Company, Limited, in 1928-29 for the construction of timber revetments and the pile foundation for the elevator was satisfactorily completed early in September. About 1,814,450 lineal feet of round piling and 2,195,920 feet b.m. of sheet piling were driven in the work. The expenditure under this contract amounted to \$510,940.57.

Early in December the Atlas Construction Company, Limited, who had been awarded the contract for the superstructure of the elevator, for the sum of \$3,093,000, started work. At the close of the year work was progressing very favourably, approximately twenty per cent being done, including nearly all the concrete mat on the piles, eighty per cent of the column bases, and sixty per cent of the floor slab and columns. Some of the tanks were also started and about sixty per cent of the dock work done.

*Highway Diversion and Grading Trackage.*—The expropriation of a portion of the public highway necessitated the construction of a new section further north, and to cover this work as well as the trackage work to connect the elevator with the C.P.R. and C.N.R. main lines, a contract, dated September 10, 1929, was let to Messrs. Curran and Briggs, Limited. This work consisted in the usual work of excavation and filling, the construction of an overhead bridge over the highway, the placing of tile and concrete drainage piles and the building of culverts. The total amount paid the contractors for this work was \$167,851.54. A portion of the cost of the highway diversion, namely, \$7,448.78, was borne by the Provincial Government of Ontario.

*Ballasting and Filling.*—A contract was awarded on February 10, 1930, to the Grenville Crushed Rock Company for the rock ballasting, lifting and trimming of four miles of tracks at an approximate cost of \$17,500, but on account of snow and frost the work could not be proceeded with before the end of the fiscal year.

A contract dated March 27, 1930, was let to the T. C. Gorman Construction Company for the placing of additional fill in the elevator railway yard and the supplying and placing of ties for six miles of trackage required for the elevator track shed and yard, at an approximate cost of \$85,345. Some equipment has already arrived at the site of the work, but no work has been done.

*Dredging Slips.*—A contract dated June 29, 1929, was awarded to The Canadian Dredging Company, Limited, to dredge two boat slips and to place the material, about 577,000 cubic yards place measure, as filling between piles, and between the highway and the elevator site as a foundation for the railway yards and for the building of revetments. Work started on July 1, but could not be completed owing to a break in the dredge machinery which could not

be repaired before the freeze up. The removal of the balance of this work, approximately 60,000 cubic yards, will be undertaken as soon as navigation is open. The amount paid the contractors during the year was \$201,042.40.

### PUBLIC BUILDINGS

The total sum expended on construction, maintenance and repairs of public buildings was \$12,304,577.80.

Of this amount \$5,809,551.18 was expended on construction and improvements of public buildings, and \$6,495,026.62 on repairs and maintenance.

The following buildings and works were completed during the year:—

*New Brunswick.*—Buctouche, public building; St. Croix, customs and immigration building; Sackville, alterations and additions to seed laboratory in agricultural building.

*Quebec.*—Montreal, Outremont postal station; Quebec, immigration hospital (Savard Park); Rock Island, customs and immigration building; Waterloo, public building.

*Ontario.*—Chatham, additions to public building; Exeter, public building; Fort Frances, public building; Hespeler, public building; Niagara Falls, old public building alterations and additions; North Bay, alterations and improvements to post office; Ottawa, additions to laboratory on Booth street, horticultural building (Experimental Farm), and elevator in Western Departmental Block; Toronto, postal station "A", belt conveyers and mechanical equipment.

*Manitoba.*—Dauphin, public building addition; Emerson, customs and immigration building; Trancona, public building; Winnipeg, Fort Osborne Barracks, alterations and additions to heating plant, and Deer Lodge Hospital extension.

*Saskatchewan.*—Gravelbourg, public building; Prince Albert, public building additions and alterations, and construction of immigration hall; Rosthern, public building; Swift Current, public building; Yorkton, public building.

*Alberta.*—Wainwright, public building.

*British Columbia.*—Douglas, customs and immigration building; Rossland, public building reconstruction.

The following buildings and works were still under construction at the close of the year:—

*Nova Scotia.*—Hantsport, public building; Sherbrooke, public building.

*Quebec.*—Beauharnois, public building; Cowansville, public building reconstruction; Grand'Mère, public building; Ste. Marie de Beauce, public building; St. Romuald, public building; Ste. Rose, public building.

*Ontario.*—Haileybury, armoury; Niagara Falls, new public building; Ottawa, central heating plant additions, Confederation building, construction of National Research New Laboratory building and alterations and additions to old buildings; Timmins, public building; Toronto, customs examining warehouse.

*Manitoba.*—Brandon, public building; Gretna, public building.

*Saskatchewan.*—Canora, public building; Indian Head, forestry building addition; Melville, public building; North Battleford, immigration building; Regina, public building addition; Saskatoon, public building; Wilkie, public building.

*Alberta.*—Calgary, public building; Edmonton, grain inspection building and public building; Falher, immigration building; Peace River, telegraph building; Red Deer, public building addition; Vegreville, public building.

*British Columbia.*—Kimberley, public building; Trail, public building.

## NATIONAL RESEARCH LABORATORIES

Parliament established in 1916 the National Research Council for the purpose of developing scientific and industrial research and to promote the utilization of the natural resources of the country. Since then the National Research Council has endeavoured to carry out its functions as successfully as possible by utilizing to the fullest extent the existing laboratory facilities and the scientific man-power available in Canada, especially in the universities and the technical divisions of the Federal and Provincial Governments. It is obvious, however, that there are many important Canadian problems, particularly those of an industrial nature, which it has not been possible for the Council to attempt to solve, due to the lack of laboratory facilities.

The National Research laboratories now under construction are intended to give adequate facilities for both scientific and industrial research, and will enable the National Research Council to effectively carry out its very important part in the promotion of the most profitable employment of the natural resources of the country and the development and expansion of its industries.

The construction of the National Research laboratories is being carried out under contract by Messrs. Robertson and Janin of Ontario, Limited, contractors of Toronto. The plans and specifications were prepared by Sproatt and Rolph, F.R.I.B.A., of Toronto, and the erection of the building is being done under their supervision.

The building is of Renaissance type and located centrally on a ten-acre site on the property of the Dominion Government on Sussex street at the junction of the Rideau and Ottawa rivers, having a frontage on Sussex street of 408 feet by a depth of 175 feet.

The plan is of the double "O" type, with two enclosed courts, each 66 by 120 feet, to provide adequate light and ventilation to the interior rooms.

Exclusive of the sub-basement, the building will be four storeys in height, with an additional low storey on the south wing behind the parapet.

The foundations throughout rest on solid rock and are of concrete. While the exterior walls are self-supporting and faced with Wallace sandstone ashlar and trim, the main fabric is of fireproofed structural steel, with reinforced concrete slab on steel joists. The roof is laid dead level and covered with flat slate. The exterior walls and roof are insulated.

The main entrance hall and staircase, lecture room and reading room with approaches, will be finished with marble walls and floors. The exhibition halls, which are located below the floor level of the two light courts, will have marble floors and stone wall lining. The President's office and Board Room will have hardwood floors and panelled walls. All corridors throughout will be lined with face brick, with glazed tile quoins to all openings, and a glazed tile cove base. The engineering laboratories and power-house will have glazed tile dado with face brick lining to all walls. All other partitions and walls and all the ceilings throughout will be plastered. The ceilings of the principal rooms and the main entrance hall will be enriched. The lavatories will have marble dado and partitions with terrazzo floors.

The doors and windows will be of steel sash type, with the exception of the doors to the principal rooms.

The floors of the corridors and private offices will be covered with battle-ship linoleum, while those in the laboratories will be of magnesite composition, that in the engineering laboratory having a hardened cement finish. The floors in the battery rooms will be of mastic.

The service stairs will be constructed of iron and steel with mastic treads and hardwood handrails. The library stack room will have steel stacks and shelves, with glass floors.

The building will be served by one main passenger elevator, one stack room elevator, and two freight elevators. All will be of the automatic push-button type.

Ventilation will be provided by means of a fresh air supply to all corridors and large rooms, with exhaust registers in the rooms. The lavatories and sub-basement space will have separate supply and exhaust ducts.

The entire building will be heated by a hot-water heating system from hot-water generators in the sub-basement. These generators will be heated by steam from steam mains and returns running through a tunnel from the power house. The boilers will be designed and equipped to burn either or both oil and powdered coal. Adequate storage will be provided for both fuels.

Construction work was started in February, 1930, and is now progressing rapidly.

#### LEASES

The cost of maintaining the public buildings was \$6,495,026.62 of which \$1,806,771.43 was paid out as rentals for buildings or parts of buildings within the Dominion occupied by different departments.

At the end of the fiscal year 1929-30 the department had 556 leases in force, an increase of fifty-four over the preceding year. The rentals for 1928-29 as shown in last year's report amounted to \$1,658,826.89. The rentals for 1929-30 show an increase of \$147,944.54 due to the leasing of additional accommodation required for various departments.

The following is a table showing the number of leases in force and rentals paid in each province:—

Nova Scotia .....	30	\$ 67,820 19
Prince Edward Island .....	7	2,238 75
New Brunswick .....	28	16,930 01
Quebec .....	86	183,640 11
Ottawa .....	77	796,095 01
Ontario (exclusive of Ottawa) .....	118	335,127 32
Manitoba .....	39	79,377 63
Saskatchewan .....	54	88,373 80
Alberta .....	58	160,089 52
British Columbia .....	57	76,419 09
Yukon .....	2	660 00
	556	\$1,806,771 43

In addition to the above an amount of \$18,303.06 was paid from the rent vote in connection with the Canada House at London, England, viz., \$9,733.33 for rent of site and \$8,569.73 for taxes.

#### TELEGRAPHS

At the close of the fiscal year the pole mileage was 9,351 $\frac{1}{4}$  miles, wire mileage 11,035, cables 364 $\frac{1}{2}$  knots; with 796 offices.

The messages sent during the year aggregated 495,562, as compared with 537,080 for the preceding year, a decrease of 41,518. This decrease in traffic was mainly due to the sale of 656 miles of line in the Kamloops-Revelstoke-Invermere section of British Columbia and the subsequent closing of 104 offices.

The expenditure on construction, repairs and maintenance was \$885,871.14, compared with \$893,888.01 for 1928-29, a decrease of \$8,016.87.

The net traffic revenue derived from the operation of the Government Telegraph Service during 1929-30 was \$281,595.94. This is a decrease of \$19,066.33 as compared with the previous year, and was due almost entirely to the decrease in traffic brought about through the sale of the balance of the lines in the mainland division of British Columbia referred to above. An increase

in revenue was shown on all other divisions with the exception of two, as per the following statement:—

	Increase	Decrease
Bay of Fundy .....	\$ 51 91	\$.....
Cape Breton .....	878 90	.....
Chatham-Escuminac .....	.....	126 76
North Shore East of Bersimis .....	3,268 27	.....
North Shore West of Bersimis .....	184 33	.....
Quebec County .....	108 37	.....
Grosse Isle, Ile aux Coudres and Ile d'Orleans Systems .....	150 23	.....
Magdalen Islands .....	122 20	.....
Pelee Island .....	32	.....
Alberta-Saskatchewan .....	4,859 54	.....
British Columbia Mainland (Lines sold Oct. 31, 1929) .....	.....	29,509 57
Vancouver Island .....	2,813 30	.....
British Columbia Northern and Yukon System ....	.....	1,867 37
	<hr/> \$12,437 37	<hr/> \$31,503 70
Net decrease .....		\$19,066 33

The decrease of \$1,867.37 on the combined British Columbia Northern and Yukon Division was due to the falling off of business in the last half of the fiscal year following the stock market depression.

The total decrease in revenue was more than offset by a decrease of \$30,407.14 in the cost of maintenance and operation, as compared with the previous year.

To meet a requirement of the Excise Act passed at the session of 1922, there was collected for the Department of National Revenue a tax of \$1,844.24 on telegraph business handled by the Government Telegraph Service.

The gross revenue from all sources, including telegraph and telephone traffic, pole line rentals and moneys received through the sale of lines, amounted to \$356,469.26.

#### NATIONAL GALLERY

The work of the National Gallery has steadily progressed during the year, and the value of its collections appreciably increased. The annual exhibition held this year at the National Gallery was thoroughly representative of the best work done in Canada, and was considered by critics as one of the most excellent exhibitions of Canadian art ever held anywhere. From this exhibition the National Gallery acquired many contemporary Canadian works of art of a very high order of merit. These superb examples of Canadian art, the increasing demand for loan exhibitions, and the growing interest shown in them is indicative of the effectiveness of the work of the National Gallery in spreading a knowledge of art throughout the country.

Many important purchases were made in all departments and especially in the "Old Master" section which is growing more important each year. The exhibition of "Old Masters", very graciously loaned by the National Loan Collection Trust of Great Britain, was opened at the National Gallery in Ottawa on October 18, 1929, by His Excellency the Governor General, in the presence of the Right Honourable Ramsay MacDonald, Prime Minister of Great Britain, and the Right Honourable W. L. Mackenzie King, and a large gathering of distinguished guests. This exhibition of notable works of art will undoubtedly further stimulate the interest taken in art in Canada, and it is hoped that it will prove to be the first of a series of loan collections drawn from the great art treasures of the Mother Country.

During the year two paintings of great dignity and distinction were presented to the National Gallery. The one, a gift from the heirs of the late Dr. Francis J. Shepherd, M.D., C.M., LL.D., F.R.C.S., a member of the Board of Trustees from 1909 to 1923, and Chairman from 1924 to 1929, is a fine

example of contemporary French painting, "La Seine à Herqueville", by Gustav Loiseau, from Dr. Shepherd's collection. The other gift, a rare and valuable example of the 15th Century French painting, was very generously purchased and presented to the National Gallery by Mr. H. S. Southam, Chairman, of the Board of Trustees. The picture, "Portrait of an Ecclesiastic", attributed to Jan Prevost, is a fine example of the best work of the period, and constitutes an addition of great value to the National Collection.

Loan exhibitions were held at the following places:—

Montreal, P.Q.; Fort William, Guelph, Kingston, London, Orillia, Ottawa, St. Thomas, Stratford, Walkerville, Ont.; Regina, Sask.; Calgary, Edmonton, Alta.; Washington, D.C.; Geneva, Switzerland; Paris, France; Tokyo, Japan; London, England.

Among the principal accessions made to the collection during the year were twenty-five oil paintings, the titles of which with the names of the authors, will be found in the report of the National Gallery included in this volume.

---

Appended to this report will be found detailed statements from the different branches, giving full particulars of the various works carried out by the department during the year.

I have the honour to be, sir,

Your obedient servant,

J. B. HUNTER,

*Deputy Minister.*

## PUBLIC BUILDINGS

By T. W. Fuller, Chief Architect

---

### NOVA SCOTIA

#### ANTIGONISH

*Public Building.*—A new heating boiler was installed in the building, and a concrete curb built in the yard.

#### ARICHAT

*Public Building.*—Repairs were made to the woodwork and plastering, and the whole building was painted and redecorated.

#### BADDECK

*Public Building.*—Electric lighting was put in, all the floors being wired and fixtures installed. The building was connected up with the water and sewerage systems of the town and the necessary drainage and plumbing fixtures put in. The interior and exterior of the building were painted.

#### GLACE BAY

*Public Building.*—The brick and stone walls were repointed, the parcels express office was re-roofed, all walls and ceilings were kalsomined, and the exterior of the building painted.

#### GUYSBOROUGH

*Public Building.*—An iron fire escape was erected, repairs were made to the roof, and three rooms decorated.

#### HALIFAX

*Bellevue Building and Annex.*—Repairs were made to chimneys, roofing, flashings and outside woodwork. The entire main building and the annex were painted outside. The work was done by contract.

*Lawlor's Island, Quarantine Station.*—A new waiting-room was built on the pier and repairs were made to the quarantine hospital, disinfectant plant, engineer's bungalow, barn and farmhouse.

*Custom House.*—General repairs were made to the building.

*Rockhead Hospital.*—Repairs were made to the plumbing and heating, and a new dish sterilizer was installed.

#### HANTSPOINT

*Public Building.*—A contract was awarded in September, 1929, for the construction of a public building on a site, which was purchased in 1914, and having a frontage of 93 feet 9 inches on William street by a depth of 100 feet. The building is of brick and terra-cotta construction, with stone trimmings and concrete basement walls. It is one and one-half stories high, 37 feet wide by 33 feet deep, with a one-story annex at the rear, 10 feet 6 inches by 6 feet. The first floor will be fitted up for the post office and the second floor for caretaker's quarters. The interior post office fittings are under construction.

## PICTOU

*Public Building.*—New heating boilers were installed. Repairs were made to the plaster and woodwork on the ground floor, and new post office fittings installed. With the exception of the third story the wiring throughout was completely renewed, and the interior and exterior of the building painted.

*Custom House.*—Sundry repairs were made to the building.

## SHERBROOKE

*Public Building.*—A contract was awarded in March, 1930, for the construction of a public building on a site, with a frontage of 75 feet on Main street by a depth of 100 feet. The building will be of brick and terra-cotta construction, with stone trimmings and concrete basement walls. It will be one and one-half stories in height, the front portion being 38 feet wide by 31 feet deep, and the rear portion 25 feet 6 inches by 15 feet 6 inches. The first floor will be fitted up for the post office and customs, and the second floor for customs offices and caretaker's quarters.

## SPRINGHILL

*Public Building.*—New interior post office fittings were installed, and minor repairs made to the roof and heating system. The old concrete sidewalks on the main and side streets were removed and rebuilt by the town.

## GENERALLY

Minor repairs or improvements were made or painting done to the public buildings at Bridgewater, Dartmouth, Digby, Kentville, North Sydney, Sydney Mines, Truro, Westville, Wolfville, and Yarmouth.

## PRINCE EDWARD ISLAND

## CHARLOTTETOWN

*Public Building.*—Changes were made for the accommodation of the income tax office by moving back the screen partition in the assistant receiver general's office, erecting counter, altering position of a door, and placing shelving in the vault. A mezzanine floor was built to provide more office space. The electric wiring was altered to meet the new requirements.

## NEW BRUNSWICK

## BUCTOUCHE

*Public Building.*—The building described in last year's report was completed, and the interior fittings were supplied and installed.

## ST. CROIX

*Immigration Building.*—The construction of a customs and immigration building was completed in May, 1929. In connection with the drainage of the customs building a parcel of land containing 5,500 square feet was acquired as a site for a septic tank.

## ST. JOHN

*Old Public Building.*—An iron fireman automatic coal burner was installed, and repairs and improvements were made to the heating system. The offices of the St. John Harbour Commission on the fourth floor were renovated, a wire cage and shelving erected in the examining room on the first floor, and a concrete floor laid in the basement workshop.

*Quarantine Station, Partridge Island.*—An addition was made to the chief engineer's cottage to provide for two extra bedrooms and an enlarged dining room. This extension was of frame construction, approximately 24 feet by 21 feet 6 inches. Repairs and improvements were made to the plumbing and heating systems and the chimneys extended in the chief medical officer's residence and main hospital. A new jacket heater was installed in the auxiliary building. Repairs were made to the roofs and the exterior of the three engineers' cottages painted. Repairs were also made to the plastering in the auxiliary building. The concrete front entrance step was replaced.

*Meteorological Observatory.*—General repairs were made to the building.

#### SACKVILLE

*Agricultural Building.*—The contract for the alterations, renovations and additions to the building referred to in last year's report was completed.

*Public Building.*—Repairs and improvements were carried out, including the renovating of the whole of the ground floor.

#### SUSSEX

*Public Building.*—New concrete steps and platforms were erected at the entrances, all loose and broken joints pointed, and the bricks over the windows and doors reset. The light standards and wiring throughout the building were repaired and the heating boiler was replaced by a new one.

#### WOODSTOCK

*Public Building.*—Terrazzo floors were laid in the front vestibule, public lobby and money order office. A partition was removed to enlarge the bathroom in the caretaker's quarters, and new plumbing fixtures installed. The walls and woodwork were painted and the ceiling whitened.

#### GENERALLY

Minor repairs or improvements were made or painting done to the public buildings at Chipman, Hillsborough, Marysville, Moncton, Richibucto, St. Stephen, and South Nelson.

#### QUEBEC

#### ACTONVALE

*Public Building.*—A new entrance was built to give access to the public lobby of the post office. The box screen in the post office was also repaired.

#### ARTIHABASKA

*Public Building.*—The whole of the exterior and interior of the building was renovated, and a terrazzo tile floor laid in the public lobby of the post office.

#### BEAUCHARNOIS

*Public Building.*—A contract was awarded in March, 1930, for the construction of a public building on a site known as lot 50, purchased in October, 1929, and located at the southeast corner of rue St. Laurent and rue des Rois. The property has a frontage of 72 feet 3 inches on rue St. Laurent by 137 feet on rue des Rois, and is irregular in shape. The building is to be constructed of brick and concrete, with stone trimmings. It will be one and one-half stories in height with basement, and a one-story annex in the rear. The front portion will be 50 feet by 39 feet 2 inches with a tower, 12 feet 8 inches square.

The annex will be 27 feet by 8 feet 6 inches. The first floor will be fitted up for the post office. The second floor will contain two offices and provide living quarters for the caretaker.

#### COWANSVILLE

*Public Building.*—A property known as the easterly part of lot 74, with a church building thereon, was purchased in November, 1929, and a contract awarded in March, 1930, for alterations and additions to convert the church building into a post office and custom house. The main interior space is used for the post office and public lobby. The remainder of the space was divided by partitions to form rooms for the postmaster, rural mail carriers, customs collector and long room, with space in the basement for customs storage and boiler and fuel room. A new mail lobby, street receiver, steps, and basement entrance were built on the side. The stairs to the basement were placed in a more central location. New entrance steps, platform and doors were provided to the tower or main entrance. The building will be heated by hot water and lighted by electricity.

#### GRAND'MERE

*Public Building.*—A contract was awarded in January, 1930, for the construction of a public building on a site situated at the corner of St. Catherine and de la Roche streets. The property has a frontage of 60 feet by a depth of 130 feet. The building is 42 feet by 61 feet 6 inches, two stories high with basement, having a one-story wing in the rear, 23 feet 4 inches by 16 feet 5 inches. The building is of reinforced concrete construction, with concrete foundation walls and brick wall to the superstructure. The first floor will be fitted up to accommodate the post office and customs examining room, with the customs long room, collector's office and caretaker's quarters on the second floor.

#### GROSSE ISLE

*Quarantine Station.*—A contract was awarded in November, 1929, for renovations and repairs to several buildings at the quarantine station, including the dynamo and disinfecter building, and the first, second and third detention buildings. The work was not completed at the end of the year.

#### LENNOXVILLE

*Public Building.*—A property, 73.4 feet on Main street by 118.5 feet on Belvedere street, with a solid brick building, approximately 56 feet square, and a frame shed at the rear, about 34 by 25 feet, was purchased for the purpose of a public building. Alterations were made in the building to meet the requirements of the post office.

#### MONTREAL

*Postal Station "B".*—Changes were made in the wickets for insurance, parcel post, parcel receiver and the stamp vendor's office. A brass rail, including plates, was supplied and installed in front of the new money order office. Electric wiring and fittings were also installed.

*Postal Station "S".*—A shed, back porch, steps and steel wire fence were erected.

*Postal Station "T".*—Interior post office fittings, inside and outside letter drops and electric fixtures were supplied and installed.

*Outremont Post Office.*—The construction under contract of the public building which was commenced last year was completed. Interior fittings were put in the post office, four electric bracket lights were placed at the entrance door, and two junior iron fireman stokers supplied and installed.

*New Examining Warehouse.*—Changes were made to provide additional office space on the ground floor. Underfeed stokers were supplied and erected on two of the boilers, a pit provided and the inside of the boilers rebricked.

*Public Works Department Building (Old Inland Revenue Building).*—The whole of the building was cleaned and a new oil burner installed.

*Hochelage Post Office.*—A wire fence was erected around the post office property.

*Immigration and Detention Hospital.*—Alterations and repairs were made to the heating apparatus.

*Generally.*—Sundry repairs and improvements were made to the general post office, postal stations "G", "H", "L" and "N", old examining warehouse, and old custom house.

#### QUEBEC

*Customs Building.*—New sidewalks were laid on St. Andrew street, opposite the main entrance, and between the building and the examining warehouse. The defective parts of the concrete protection wall around the building were renewed. Repairs were made to the stonework of the balustrade of the steps of the portico, with necessary pointing. All windows and outside doors were repaired and caulked with plastic cement. General repairs were made, and the whole of the building painted and decorated throughout.

*Immigration Hospital.*—The contract for an addition to the hospital described in last year's report was completed. Repairs were made to the brickwork and windows in the northeast wall, and to three chimneys. The grounds were enclosed by a wire fence, and the surface of the corridor in the basement was covered with flooring. The three entrance doors were provided with storm porches, and a wooden sidewalk, 3 feet wide by 313 feet long, was laid in front of the property.

*Citadel, Governor General's Quarters.*—Sodding was laid on the lower terrace and near the King's bastion. A chain fence was also provided on the lower terrace.

*Generally.*—Sundry repairs and improvements were made to the examining warehouse, general post office, immigration building, Limoilou post office, and observatory.

#### RICHMOND

*Public Building.*—A terrazzo floor was laid in the public lobby of the post office, and the interior of the building was cleaned and decorated throughout.

#### ST. LAMBERT

*Public Building.*—The sidewalks and approaches were entirely rebuilt, and the lighting fixtures on the first floor of the building replaced with modern ones.

#### STE. MARIE DE BEAUCE

*Public Building.*—A property known as parts of lots 504 and 511 was purchased in November, 1929, as a site for a public building, and is situated on the principal street, having a frontage of 90 feet by a depth of 100 feet to low water mark. A contract was awarded in February, 1930, for the construction of a building which will be of brick and terra-cotta construction, with stone trimmings and concrete basement walls. It will be 50 feet 4 inches wide by 28 feet 4 inches deep, one and one-half stories in height. The first floor will be fitted up for the post office and the second floor will provide caretaker's living quarters and a spare office.

## ST. ROCH DE QUEBEC

*Post Office.*—The yard was paved with concrete, repairs were made to the outside walls and iron fencing erected at the rear of the building. Three new entrance doors were provided, general repairs were made, the whole of the building was painted and decorated throughout.

## ST. ROMUALD

*Public Building.*—A contract was awarded in September, 1929, for the erection of a public building for postal purposes on the north corner of lot 307, situated on Main or Commercial street. The property, which was purchased in May, 1914, has a frontage of 109 feet 3 inches by a depth varying from 110 feet on one side to 124 feet 1 inch on the other. The building is of brick construction with stone trimmings and concrete basement walls. It is 54 feet wide by 32 feet deep, one and one-half stories in height. The first floor will be fitted up for the post office and the second floor as caretaker's living quarters.

## STE. ROSE

*Public Building.*—A contract was awarded in December, 1929, for the erection of a public building on a site purchased in September, 1929. The property is irregular in shape, approximately 75 feet on Ste. Rose street by 130 feet on Hotte avenue. The building is of brick construction with stone trimmings and concrete basement walls. It is one and one-half stories in height, 37 feet wide by 34 feet deep, with a one-story annex, 16 feet 6 inches by 6 feet. The first floor will be fitted up for the post office and the second floor as caretaker's quarters.

## STANHOPE

*Customs and Immigration Building.*—A hood was built over the driveway in front of the building. Roof gutters were placed, and an electric sign put up.

## TROIS RIVIÈRES

*Public Building.*—A galvanized iron link chain fence was erected on the west side of the property. A large hood was built over the mail entrance, the concrete work generally improved, handrails were placed on the concrete steps, and a section of the hardwood floor in the working part of the post office renewed.

## WATERLOO

*Public Building.*—The construction of the public building which was commenced last year was completed. Interior post office fittings were supplied and installed. The work of grading, building sidewalks and driveways was carried out. An oil-burning equipment was installed in the boiler.

## GENERALLY

Minor alterations, improvements or repairs were made or painting done to the public buildings at Cookshire, East Angus, Granby, Hull (Research Station), Iberville, Joliette, Knowlton, Laprairie, L'Assomption, Magog, Marieville, Montmagny, Nicolet, Rivière du Loup, Rock Island, Ste. Agathe des Monts, St. Gabriel de Brandon, St. Hyacinthe (National Revenue Building), St. Jean (National Revenue Building and Post Office), Sherbrooke (Examining Warehouse), Sorel, Terrebonne, and Thetford Mines.

## ONTARIO

## CHATHAM

*Public Building.*—The additions to this building for post office and customs purposes, which were referred to in last year's report, were completed. A new screen, fittings and lighting fixtures were installed in the post office.

## EXETER

*Public Building.*—A contract was awarded in November, 1929, for the construction of a building for post office purposes on a site purchased in May, 1914, and situated on Main street, having a frontage of 74 feet by a depth of 158 feet. The building is 34 feet wide by 27 feet 6 inches deep, and is one story high with basement. It is of brick and terra-cotta construction with stone trimmings and concrete foundations. Interior post office fittings will be installed when the building is completed.

## FORT FRANCES

*Public Building.*—A contract was awarded in September, 1929, for the erection of a public building on a site situated at the southeast corner of Portage avenue and Scott street, which was purchased in September, 1912. The property has a frontage of 132 feet on Portage avenue and 165 feet on Scott street. The building, 54 feet 6 inches wide by 94 feet 8 inches deep, is constructed on a concrete foundation, with a portion of the basement unexcavated. A structural steel frame supports the wooden floors. The walls are built of brick with stone entrances and trimmings. The interior fittings were supplied and installed. On the first floor accommodation is provided for the post office, customs examining warehouse, R.C.M.P. offices and barracks, and the District Resident Engineer's offices of the Department of Public Works. The second floor provides space for the customs long room, records, Departments of Immigration and Colonization and Indian Affairs, as well as living quarters for the caretaker.

## HAMILTON

*Public Building.*—The roofs of the main and two side towers of the public building were completely re-covered with copper. Minor improvements and repairs were also carried out.

## HAWKESBURY

*Public Building.*—A contract was entered into during August, 1929, for alterations to the public building, and the construction of a one-story addition in the rear to provide additional space for the post office. The new part is 23 feet wide by 24 feet deep, and is built in the angle formed by the present one-story portion and the main part, the old rear wall having been removed. The walls are of brick with stone foundations. The gable and the sloping roof on the examining warehouse wing were removed, and a new flat roof built to cover the whole of the new and old one-story portion.

## HESPELER

*Public Building.*—The new public building referred to in last year's report was completed. Post office screen, lock boxes and fittings were installed.

## KINGSTON

*Custom House.*—A new felt and gravel roof was laid, and the main cornices covered with copper. A new hardwood floor was put down throughout the ground floor. Part of the interior of the ground floor, and the exterior of the building were painted.

*Public Building.*—The masonry of the stone walls was pointed, the roof recoated and gravel covered, and two junior iron firemen installed. The interior of the post office and caretaker's quarters and the exterior of the building were painted.

## LISTOWEL

*Public Building.*—An oil-burning equipment, including metering devices, was installed.

## NIAGARA FALLS

*Old Public Building.*—A rearrangement of the interior of the old public building, which was damaged by fire on November 9, 1927, was made to accommodate the customs offices. New floors were laid throughout, plumbing, heating and wiring renovated, old plaster replaced and other repairs made. A contract was awarded in October, 1929, for the erection of a one-story addition, 28 by 42 feet, in the rear of the old public building. The walls are of stone on concrete foundations.

*New Public Building.*—A contract was awarded in October, 1929, for a public building to be erected on a site purchased in June, 1929, 100 by 100 feet, situated at the southwest corner of Queen street and St. Clair avenue. The building is 82 feet 3 inches by 83 feet 3 inches, two stories high with basement. The foundation walls are of concrete, while the exterior walls on Queen street and St. Clair avenue are faced in stone with brick backing. The rear and side walls, the interior walls around the court, vault walls, stair wells and partitions in the basement are of brick. A structural steel frame supports the interior of the building. The entire first floor will be occupied by the post office, while the second floor houses the offices of the parcel post, Departments of Immigration and Colonization and Agriculture, R.C.M.P. and caretaker's living quarters. The portion of ground at the side and rear of the building will be used for a driveway. The work is still in progress.

## OSHAWA

*Customs Building.*—Customs fittings were installed in the second-story addition built last year.

## OTTAWA

*Generally.*—The maintenance and repair work to all government buildings and grounds was carefully attended to during the year.

*Central Heating Plant.*—A contract was entered into in October, 1929, for the construction of an addition to the central heating plant. It is approximately 58 feet from the front to the rear, extending 69 feet in a westerly direction by 62 feet high above the grade level, and roofed over to correspond with the original building. The addition is of reinforced concrete frame type with the outer wall facing the river, finished in rock-faced stone to match that of the present power-house, the other exterior walls being of brick except the rear wall against the cliff which is of solid concrete. The floors are of concrete, and the interior walls lined with brick, similar to the present building. The roof is a reinforced concrete slab, covered with asphalt. The coal chutes are placed in the roof slab and communicate directly with the coal hoppers underneath. Accommodation is provided for two additional heating boilers, each having a capacity of 500 H.P., and above these boilers are placed the reinforced concrete coal hoppers. A storage room for spare parts and an ash chamber were also made. In constructing the addition it was necessary to demolish a portion of a building on Cliff street, thus necessitating the building of a retaining wall at the top of the cliff.

Contracts were also awarded for alterations and additions to the mechanical equipment which comprised the installation of water tube boilers, and a pulverizing and burning equipment, and boiler settings. Repairs were made to the brickwork and pipe lines renewed.

*Parliament Buildings.*—The copper roof over the government lobby at the west end of the building was renewed. Alterations were made in the parliamentary restaurant, partitions altered, shelving and cupboards erected, equipment overhauled and allocated, two frigidaires supplied and installed, and the quarters redecorated. A room adjoining the service entrance and freight elevator was fitted up to provide a service kitchen for the speaker's quarters. The stone door opening between the south corridor and the vestibule adjoining the Senate Chamber was fitted with a quarter cut oak door frame and doors having carved, moulded and cusped panels with small shields, each painted to represent a province of the Dominion of Canada. The opening from the south corridor into the vestibule of the House of Commons Chamber was also fitted with a quarter cut oak frame and doors appropriately carved and moulded. Partitions were erected in several rooms, and some pointing was done to the outside stone steps.

*East Block.*—The jointing on the stone steps was repointed and renovations were carried out in the Loan and Currency Branch quarters. The old water main in the basement was replaced by a 4-inch C.I. water pipe and improvements made to the elevator doors on the ground floor in the Loan Branch and the first floor.

*Grounds.*—The land along the west side of Sussex street, north of the Connaught building, was filled in, graded and seeded, and the slope along the east side of MacKenzie avenue also graded and seeded, trees being planted in the boulevard, which was sodded. Mackenzie avenue was graded down preparatory to laying the asphalt pavement with curbs and gutters. Subsurface drainage for storm water and a storm sewer were laid towards and along St. Patrick street into the Sussex street sewer. St. Patrick street roadway was widened 20 feet, the telegraph and telephone poles were moved back, and the corners of Mackenzie avenue, St. Patrick and Sussex streets were rounded.

*Post Office.*—Additional radiation was installed in the postmaster's and assistant postmaster's offices, and in the main lobby near the elevator. Receptacles were installed for the cancelling machine on the ground floor.

*Langevin Block.*—A new terrazzo floor was laid in the second and third floor corridors. Renovations were carried out in the corridors and lavatories. A new steel partition and a wooden stairway to the gallery were erected in a new location.

*Daly Building.*—A fireproof vault with new vault doors was built in the basement. Renovations were carried out on the fourth floor, and repairs made to the brickwork on the boilers.

*Printing Bureau.*—Repairs were made to the brickwork on Nos. 1 and 2 boilers. A small vertical boiler with an oil burner was installed in the boiler room to provide hot water and steam for the glue pots. Two Jones underfeed mechanically-driven stokers complete were also installed on boilers Nos. 3 and 4.

*Archives.*—A photostat room, containing a smaller light proof dark room, was erected in the basement, and a large range boiler installed in the boiler room.

*Royal Mint.*—Considerable pointing of the stonework was done, and wiring installed from the transformer room to the two motors in the refinery. A white terrazzo floor was laid in the mechanics' part and the large vault on the ground floor.

*National Research Laboratories.*—The buildings on the Edward's property on the west side of Sussex street in New Edinburgh are being remodelled to serve the purposes of research works and a motion picture bureau. A portion of the building on John street was fitted up for a laboratory, and the remainder for a motion picture bureau. Partitions were erected, magnesite flooring laid, walls and ceilings painted, and refrigerator, cooling and dehumidifying plants and spraying system installed. The ceilings and walls of the projecting room were faced with insulating material, roofs re-covered, and heating and lighting systems installed. The former lumber shed was altered and fitted up as a wind tunnel for testing aeroplanes, the inside of the external walls faced with 8 inches of reinforced concrete, and reinforced concrete walls erected to form tunnels and nozzles. Iron stairs were also installed. Alterations, etc., were made to the former planing mill for a modern machine shop, and a portion fitted up as a drafting room for aeronautical work. A portion of the old boiler room was remodelled and fitted up as a central heating plant for all the buildings. A new electric lighting system is being installed throughout. The work is still in progress.

A contract was awarded to Robertson and Janin of Ontario Limited, for the construction of the National Research Laboratories. Plans and specifications were prepared by Sproatt & Rolph, F.R.I.B.A., Architects, of Toronto, and the erection of the building is being done under their supervision. The building, which is of Renaissance type, occupies a site on the property of the Dominion Government on Sussex street at the junction of the Rideau and Ottawa rivers, and has a frontage on Sussex street of 408 feet by a depth of 175 feet, located centrally on a ten-acre site. The plan is of the double "O" type, with two enclosed courts, each 66 by 120 feet, to provide adequate light and ventilation to the interior rooms. Exclusive of the sub-basement, the building will be four stories in height, with an additional low story on the south wing behind the parapet. The foundations throughout rest on solid rock, and are of concrete. While the exterior walls are self-supporting and faced with Wallace sandstone ashlar and trim, the main fabric is of fireproofed structural steel, with reinforced concrete slab on steel joists. The roof is laid dead level and covered with flat slate. The exterior walls and roof are insulated. The main entrance hall and staircase, lecture room and reading room with approaches, will be finished with marble walls and floors. The exhibition halls will have marble floors and stone wall lining. These halls are located below the floor level of the two light courts. The President's office and Board Room will have hardwood floors and panelled walls. All corridors throughout will be lined with face brick, with glazed tile quoins to all openings, and a glazed tile cove base. The engineering laboratories and power-house will have glazed tile dado with face brick lining to all walls. All other partitions and walls and all the ceilings throughout will be plastered. The ceilings of the principal rooms and the main entrance hall will be enriched. The lavatories will have marble dado and partitions with terrazzo floors. The doors and windows will be of steel sash type, with the exception of the doors to the principal rooms. The floors of the corridors and private offices will be covered with battleship linoleum, while those in the laboratories will be of magnesite composition, that in the engineering laboratory having a hardened cement finish. The floors in the battery rooms will be of mastic. The service stairs will be constructed of iron and steel with mastic treads and hardwood handrails. The library stack room will have steel stacks and shelves, with glass floors. The building will be served by one main passenger elevator, one stack room elevator, and two freight elevators. All will be of the automatic push-button type. The laboratory section of the building will be equipped with gas, water and drainage service stacks, in bays at approximately every 24 feet, located so that no laboratory unit wall is more than 12 feet from such service. All drainage stacks and vents will be of acid proof

metal. The electrical service distribution in addition to overhead lighting and office outlets, will be located similarly to the plumbing services, and provides a flexible range of various voltages, in addition to the standard A.C. and D.C. voltages. In addition to these services, steam will be distributed to such units that will require it. Ventilation will be provided by means of a fresh air supply to all corridors and large rooms, with exhaust registers in the rooms. The lavatories and sub-basement space will have separate supply and exhaust ducts. The entire building will be heated by a hot-water heating system from hot-water generators in the sub-basement. These generators will be heated by steam from steam mains and returns running through a tunnel from the power-house. A complete system of gas scrubbers and cleaners will insure an absence of all smoke from the chimney of the power-house. The boilers will be designed and equipped to burn either or both oil and powdered coal. Adequate storage will be provided for both fuels. The upper floor of the power-house will provide accommodation for fifty cars. Construction work was started in February, 1930, and is now progressing rapidly.

*Bureau of Statistics (Green Island).*—Partitions were erected on the second floor, ceilings sheeted in the Administration Branch and the printing section, and electric receptacles installed. A machine shop was equipped at the north-east corner of the building.

*Fuel Research and Testing Laboratory (Mines Branch, Booth Street).*—A contract was awarded in April, 1929, for the erection and completion of interior walls, floors, foundations, drains, etc., in the Pyro-Metallurgical Laboratory, Booth street. A steel constructed gallery was erected at each end of the laboratory to accommodate radiation tanks. The laboratory office building and coal shed roofs were repaired, and an iron fence erected around the grounds.

*Rideau Hall.*—An entrance at the end of the centre hall leading to the north court was constructed by converting a window into a door, and a reinforced concrete landing and steps with an iron balustrade was built. General repairs were made and minor improvements carried out.

*Experimental Farm.*—The new horticultural building addition, described in last year's report, was completed. In the old building the roof cornice was extended down to give the same projection with a box cornice, and the exterior walls stuccoed to match the new building. An extension to the horse barn was made on the east side, 32 feet wide by 72 feet long and 21 feet high, set on 12-inch concrete foundation walls with a balloon framed construction. The roof was covered with asbestos shingles, and the interior and exterior painted. A small horse barn was moved and placed on a concrete foundation and fitted up for sheep sheds, and the old blacksmith's shop and wagon shed renovated for a stable. The old carpenter shop was moved a distance of about 600 feet and placed upon a concrete foundation, 55 feet wide by 85 feet long and 8 feet high by 12 inches thick. The interior was renovated for a carpenter, paint and blacksmith shop. Two chimneys were erected, and a low pressure steam heating system with radiators, as well as an oil burner, were installed. The residence at the observatory was repaired and painted. Oil burners were installed in the horticultural building, old carpenter shop, observatory and geodetic survey building. The silo from the main farm was moved to the Booth farm and placed on a concrete foundation. A barn on the Booth farm was moved about 1,000 feet and placed in the southeast corner of the field in line with the main buildings, and with other barns, repaired and painted. Improvements and repairs were made to the double house on the farm.

#### PARKHILL

*Public Building.*—Improvements were made to the heating system, including new boilers. A jacket heater was also put in.

## PETERBORO

*Public Building.*—A fireproof vault was built in the basement, and fitted with cabinets and shelves for plans for use of the Trent canal engineers.

## ST. MARY'S

*Public Building.*—Extensive repairs to the stone walls, brickwork and roof were carried out. The interior was redecorated, and the whole building put in good condition.

## SARNIA

*Public Building.*—The building was completely rewired and new electric fixtures provided.

## STRATFORD

*Public Building.*—New toilets were installed in the basement and second floor, and new lighting fixtures provided for the post office. The interior and exterior of the building were painted.

## TIMMINS

*Public Building.*—A contract was awarded in October, 1929, for the erection of a public building on a site acquired in October, 1928, and having a frontage of 70 feet on Fourth avenue and 108 feet on Pine street to a 12-foot lane in the rear. The front portion of the building is 67 by 67 feet, two stories high, and the rear portion, 26 by 40 feet, one-story high, with basement throughout. The walls are constructed of artificial stone and terra cotta with concrete foundations. The floors of the interior are supported on structural steel. The first floor will be fitted up to accommodate the post office and customs examining warehouse. The second floor will house the customs long room, collector's office, record room and caretaker's quarters. A contract was given in March, 1930, for the supply and installation of customs and post office interior fittings.

## TORONTO

*Custom House.*—A contract was awarded in October, 1929, for the construction of a building on a site on the south side of Front street, extending for a portion of the block between Yonge and Bay Streets. The property is irregular in shape and extends southward to a lane in the rear. The building is designed primarily for customs purposes, with the offices on all floors facing towards Front and Yonge streets. The structure is supported on a reinforced concrete frame, and is fireproof throughout. Following the curved line of Front street, the facade is executed in stone along classical lines. There will be five stories in the main part and six stories in the centre portion, with a basement under the whole building. There will be five passenger elevators, three being at the Front street centre entrance and two at the Yonge street entrance. In the warehouse section there will be ten freight elevators. A customs long room, two stories in height, will be located on the first floor adjoining the Yonge street side of the building. All main halls will be finished in marble. The long room will have a plaster ceiling with marble dados to the walls. The office floors will be covered with battleship linoleum, while corridors and toilets will have terrazzo floors. The warehouse floors will be laid in asphalt. The building will be heated with steam from the central terminals heating plant. Construction is still in progress.

*Postal Terminal "A".*—Belt conveyers and other mechanical equipment were put in. The four main floors of the building were wired and new lighting fixtures installed.

*Postal Station "H".*—A complete new screen and fittings were supplied.

*Generally.*—Miscellaneous repairs and improvements were made to the buildings in the federal area.

## WALKERVILLE

*Public Building.*—Alterations were made to suit the requirements of the customs postal parcels branch, and a new electric freight elevator installed.

## GENERALLY

Minor alterations, improvements or repairs were made or painting done to the public buildings at Amherstburg, Brantford, Cayuga, Cornwall, Dundas, Fort William, Gananoque, Guelph, Hanover, Harriston, Kenora, London, Mildmay, Milverton, Palmerston, Port Arthur (customs building), Preston, Sudbury, Whitby, Wiarton, Wingham, and Woodstock.

## MANITOBA

## BRANDON

*Public Building.*—A contract was awarded in January, 1930, for the erection of a new public building on a site purchased in November, 1929, and situated at the corner of Eleventh street and Princess avenue. The frontage is 120 feet on Princess avenue by a depth of 125 feet on Eleventh street. The building will be two stories and basement in height, 113 feet 5 inches by 82 feet, and of fireproof construction. The two main facades of the building will be of stone. The other exterior walls will be faced with brick with terra-cotta backing. The foundation walls are of concrete. The partitions will be of plastered terra-cotta. The first floor will be fitted up for the post office, and the second floor will contain office space and caretaker's quarters. The work is still in progress.

## DAUPHIN

*Public Building.*—A contract for an addition to the public building was made in October, 1929. The new work is to be 21 feet by 52 feet, and conform with the exterior lines of the existing building. The walls are of brick with concrete foundations. The first floor is fitted up for the post office and customs examining warehouse and the second floor occupied by the customs long room. Extensive alterations were made in the attic of the main building to provide space for the R.C.M.P. and caretaker's quarters.

## EMERSON

*Customs and Immigration Building.*—The contract for the construction of this building, referred to in last year's report, was completed. The grading of the approaches, filling in ditches, and levelling up the site around the new building were carried out.

## GRETNA

*Public Building.*—A contract was awarded in October, 1929, to erect a public building on a site purchased in June, 1913, and situated at the southwest corner of Seventh street and Hespeler avenue, having a frontage on Seventh street of 78 feet and a depth of 120 feet on Hespeler avenue. The building is 37 by 34 feet, one and one-half stories high with basement. There is also a one-story portion at the rear, 6 feet 6 inches by 13 feet 6 inches. The walls are constructed of brick and terra-cotta, with concrete foundations. The first floor will be fitted up to accommodate the customs and post office, while the caretaker's quarters will be provided on the second floor. The work is still in progress.

## MINNEDOSA

*Public Building.*—A new sewer was constructed from the public building to the river.

## PORTAGE LA PRAIRIE

*Public Building.*—The exterior stonework was repaired and repointed. The roof was repaired and the exterior painted. An electric hoist was installed in the customs excise office.

## TRANSCONA

*Public Building.*—The construction of the public building commenced last year was completed. Concrete sidewalks were laid and post office lock boxes and fittings installed.

## WINNIPEG

*Immigration Building No. 1.*—Repairs were made to the brickwork, two cast iron dead plates installed to two return tubular boilers, and Dunham steam traps replaced. The electric lighting was improved, and the partitions in the division commissioner's office altered and painted.

*General Post Office.*—In the basement partitions were removed and the space refloored, electrical work carried out, and a ventilating electric fan supplied and installed. The caretaker's quarters were painted and renovated. Posts and beams were put in to strengthen the mezzanine story, and metal chutes altered and erected. A contract was awarded for alterations and additions to the electric wiring and fixtures on the main and mezzanine floors.

In order to provide additional post office accommodation lot 122 in block 3, together with the buildings thereon, was purchased in November, 1929. It is situated on the east side of Garry street, south of and at the rear of the post office building.

*Postal Station "B".*—The flat roof was re-covered with 4-ply felt, pitch and gravel roofing.

*Generally.*—Sundry repairs and improvements were made to the custom house and examining warehouse.

## GENERALLY

Minor alterations, improvements or repairs were made or painting done to the public buildings at Le Pas, Morden, St. Boniface, Souris, and Virden.

## SASKATCHEWAN

## BATTLEFORD

*Public Building.*—Alterations were made to the heating apparatus, a new boiler installed, and new storm porches constructed to the entrances.

## CANORA

*Public Building.*—A contract was awarded in November, 1929, for the erection of a public building on a free site at the corner of Main street and Second avenue, given by the municipality of the town of Canora. The property has a frontage of 78 feet on Main street by a depth of 130 feet on Second avenue. The building is 44 feet wide by 35 feet deep, one and one-half stories high with basement, with a one-story portion in the rear, 7 feet 6 inches by 12 feet. The foundation walls are of concrete, while the superstructure is of brick backed with terra-cotta and trimmed with stone. The first floor will be fitted up for the post office and the second floor for offices and caretaker's quarters.

## GRAVELBOURG

*New Public Building.*—A contract was awarded in November, 1929, for the erection of a public building on a site purchased in 1911, and having a frontage of 104 feet on Main street by a depth of 125 feet on Fourth avenue. The building is two stories high with basement. The foundations are of concrete and the exterior walls of brick and terra-cotta, trimmed with stone. The structure is 42 feet 6 inches wide by 53 feet deep. The first floor is fitted up for the post office, and R.C.M.P., and the second floor for caretaker's quarters.

The old frame building was removed from the site and used as a temporary post office during the construction of the new building.

## INDIAN HEAD

*Forest Nursery Station.*—General repairs were made to the several houses and buildings.

*Forestry Office Building.*—A contract was awarded in January, 1930, for alterations to the building and the construction of an additional story to provide more accommodation for the forestry branch. Two new doors were put in the present first floor portion, and the electric service enlarged to meet the new requirements.

## MAPLE CREEK

*Public Building.*—Repairs were made to the roof, etc. New storm porches were constructed and the interior was painted.

## MELVILLE

*Public Building.*—A contract was awarded in September, 1929, for the erection of a public building on a site purchased in December, 1928, at the corner of Main street and Fourth avenue. The frontage of the property is 100 feet on Main street and 130 feet on Fourth avenue. The building is 46 feet 4 inches wide by 68 feet deep, two stories high with basement, with a 15-foot square tower. The construction is of brick with stone trimmings on concrete foundations. The post office will be accommodated on the first floor. The customs offices, R.C.M.P. and caretaker's quarters are to be on the second floor.

## MOOSE JAW

*Public Building.*—New cement sidewalks were laid and general repairs made.

## NORTH BATTLEFORD

*Immigration Building.*—A contract was awarded in February, 1930, for the erection of an immigration building on a site, 50 feet by 108 feet 5 inches, at the corner of Edward street and Albert avenue, purchased in 1930. The building will be 48 by 35 feet, two stories high with basement. The foundation walls are of concrete and the walls of the superstructure of brick and terra-cotta trimmed with stone. The building is to be used for immigration purposes, with the caretaker's quarters on the first floor.

*Public Building.*—Alterations were made to the post office, interior fittings installed, and improvements to the electric lighting system executed.

## PRINCE ALBERT

*Public Building.*—The contract for the additions and alterations to the public building commenced last year was completed. A new cement pavement

and a driveway for the customs were laid, a new brick porch built on the main entrance, and general repairs and improvements made to the building.

*Immigration Building.*—The construction of the immigration building referred to in last year's report was completed.

#### REGINA

*Receiver General Building.*—The interior and exterior were painted. The electric lighting was improved.

*Public Building.*—A contract was awarded in October, 1929, for an addition, with a 50-foot frontage by a depth of 125 feet, south of the existing building on Scarth street, on lots 4 and 5 in block 306, purchased in April, 1929. The structure is of fireproof construction, four stories high with basement, and has a steel frame with reinforced concrete floor slabs. The partitions are of terra-cotta and the rear and side walls of brick. The Scarth street facade is faced with Manitoba stone to conform with the existing work. The foundation walls are of concrete and the floors in the corridors and toilets of terrazzo. Alterations were made in the old part of the building. The first and second floors of the addition will accommodate the postal service. The third floor is assigned to the gas and electricity inspection office, Department of Immigration, and the District Resident Architect of the Department of Public Works. The fourth floor is not yet allotted. The work is still in progress.

#### ROSTHERN

*Public Building.*—The construction of the public building described in last year's report was completed. The interior fittings were made for the post office and installed.

#### SASKATOON

*New Public Building.*—A contract was awarded in May, 1929, for the erection of a public building on a site purchased in March, 1928 and having a frontage of 140 feet on 22nd street by a depth of 150 feet on First Avenue. The building is 128 by 138 feet, six stories high above the sidewalk level with a basement. The construction is fireproof throughout, consisting of a structural steel frame with reinforced concrete floor slabs. On the two main facades of the building the walls are of Manitoba stone and brick, while the other exterior walls have pressed brick facing. The partitions are built of terra-cotta. The office floors are covered with battleship linoleum and the halls, corridors and toilets have terrazzo floors. The entrance halls on the first floor are to have marble dados and imitation Caen stone walls. There are two passenger and two freight elevators. The building is steam-heated. The first floor will provide space for the Post Office Department, customs shipping room, and weights and measures office; the second floor the Post Office Department; the third floor the Customs Department, gas and electricity inspection office, and Departments of Agriculture and Immigration and Colonization; the fourth floor income tax office and the Post Office Department; and the fifth floor the Soldiers' Settlement Board and Departments of Pensions and National Health and Agriculture. The sixth floor is not yet allotted. The work is still in progress.

#### SUTHERLAND

*Forest Nursery Station.*—A new culvert was installed and the road leading to the nursery station graded. General repairs were made to the various buildings, including the building of a new porch to the boarding house, stuccoing the exterior of the foreman's house and laying a new floor in the packing shed and shop.

## SWIFT CURRENT

*Public Building.*—The construction of the public building described in last year's report was completed. Interior oak fittings, etc., were made and installed. Cement sidewalks were laid around the building, and a gravel driveway built.

## TISDALE

*Public Building.*—The interior fittings for the post office constructed last year were supplied and installed.

## WEYBURN

*Public Building.*—Electric light fixtures were installed in the post office, and the interior of the building was painted.

## WILKIE

*Public Building.*—A contract was awarded in October, 1929, for the erection of a public building on a site purchased in 1914, and having a frontage of 115 feet on Main street and 52 feet on Imperial avenue. The building, 47 feet on Imperial avenue by 58 feet on Main street, is two stories high with basement. The foundation walls are of concrete and the superstructure of brick with stone trimmings. The interior of the structure is supported by a steel frame. The post office will be accommodated on the first floor. The second floor will be assigned to the National Defence offices, R.C.M.P. and caretaker's quarters. The work is still in progress.

## YORKTON

*Public Building.*—A contract was awarded in September, 1929, for an addition, one story high without basement, 26 feet by 51 feet 4 inches, to be built on the rear of the existing building. The foundation walls are of concrete and the superstructure of brick and terra-cotta. A portion of the rear wall of the main building at the first floor was removed, and the upper part supported by structural steel. The flat roof of the addition is also supported on steel. The additional space was required for the postal services. A new door and sidewalks were built to the main part of the building. The interior of the old part was painted.

## ALBERTA

## CALGARY

*Customs Building.*—Repairs were made to the storm sash, fireproof partitions, etc., and the interior of the building was decorated. Structural alterations were made to accommodate the parcel post branch on the ground floor, and the construction of a new counter and cashier's cage was commenced, but not finished at the end of the year.

*Public Building.*—A contract was awarded in January, 1930, for the erection of a new federal building on a site, having a frontage of 190 feet on Eighth avenue and a depth of 130 feet on First street east. The building, 120 feet 7 inches by 159 feet 9 inches, is of fireproof construction, eight stories and mezzanine above the grade line, with basement and sub-basement. The framework is of reinforced concrete construction throughout, including the foundation. All partitions are of brick or terra-cotta. The floors will be served by three passenger elevators and one freight elevator. The building is faced on all sides with Tyndall stone. The public halls on the first floor will have marble floors and walls with ornamental plaster ceilings. All the corridors will have terrazzo floors with marble borders and base, and cement dados.

All offices will be finished in plain plaster, with linoleum floors. The first, second and third floors will accommodate the Post Office Department. The other floors are assigned to the various departmental offices centered in Calgary. The building will be heated by steam. The work is still in progress.

## CAMROSE

*Public Building.*—A contract was awarded in December, 1929, for the erection of a public building on a site acquired in June, 1911, and having a 50-foot frontage on Main street by a depth of 120 feet on Prospect avenue. The building, two stories high with basement, is 78 feet 4 inches by 40 feet 10 inches, with a one-story portion in the rear, 19 feet 3 inches by 20 feet 8 inches. The exterior walls are of brick, trimmed with stone, and the foundations of concrete. The first floor is to be occupied by the post office and customs examining warehouse. The second floor will provide space for offices and caretaker's quarters.

## EDMONTON

*Grain Inspection Building.*—A contract was awarded in February, 1930, for the erection of a building in the Calder Yards, Canadian National Railways. The building is one story high without a basement, of frame construction, 22 feet 4 inches by 38 feet 4 inches. The foundations are of concrete. The work was not completed at the end of the year.

*Public Building.*—A contract dated March, 1930, was awarded for an addition and alteration to the public building. The addition is 129 feet 9 inches by 70 feet 6 inches, four stories high with basement, the new and old work conforming with each other. The foundations are of concrete. A structural steel frame supports the reinforced concrete floor slabs, the whole being fire-proof. The facade on 100th street conforms with that of the existing structure and the rear walls are built of brick and terra-cotta. The main public lobby on the first floor, as well as the corridors and toilet rooms, will have a terrazzo floor with marble base and border. The offices will have wooden floors. The partitions will be of terra-cotta, plastered and tinted. One new passenger elevator will be installed. The first and second floors will accommodate the Post Office Department; the third floor the Post Office and Customs Departments; and the fourth floor the income tax, customs, and caretaker's quarters. The work is still in progress.

## FALHER

*Immigration Building.*—A contract was awarded in February, 1930, for the erection of an immigration building on a site purchased in October, 1929, and having a frontage of 110 feet on Main street by a depth of 150 feet. The building is 34 by 76 feet, of frame construction, one and one-half stories high, without a basement. The foundations are of concrete. The first floor will be fitted up as quarters for immigrants and for the accommodation of a caretaker.

## PEACE RIVER

*Telegraph Building.*—A contract was awarded in October, 1929, for the erection of a two-story frame building on a concrete foundation, 36 by 28 feet. Space will be provided for the telegraph office and store-room, with six living rooms for the operator.

## RED DEER

*Public Building.*—A contract was awarded in February, 1930, for alterations and an addition to the public building, consisting of a one-story annex without basement, 11 by 28 feet, at the rear of the existing building. The

foundations are of concrete and the exterior walls of brick. The present rear wall was removed where the addition joins the old building, and steel beams inserted. A small alteration was made to the layout of the old building at the stairs. The rear driveway was also relocated to suit the new addition. An old excavation on the site was filled in and the grounds graded. The work was not completed at the end of the year.

#### VEGREVILLE

*Public Building.*—A contract was awarded in November, 1929, for the erection of a public building on a site purchased in May, 1911, and having a 90-foot frontage on Main street and a depth of 130 feet on Second avenue west. The building, two stories high with basement, is 32 by 50 feet, with a one-story portion in the rear, 6 feet by 13 feet 6 inches. The walls are of brick trimmed with stone, and the foundations of concrete. The first floor will be fitted up to accommodate the post office, and the R.C.M.P. office and caretaker's quarters will be provided on the second floor.

#### WAINWRIGHT

*Public Building.*—This building, described in last year's report, was completed. Post office screen and fittings, post office boxes and bronze work for letter drops, wickets, etc., as well as a counter for the office of the National Parks Branch, were supplied and installed. A motor and pump for the water system were provided.

#### BRITISH COLUMBIA

##### DOUGLAS

*Customs and Immigration Building.*—The cement paving, grading, graveling, etc., of the Diversion road at Douglas was carried out under contract awarded in October, 1929.

##### KIMBERLEY

*Public Building.*—A contract was awarded in September, 1929, for the erection of a public building on a site with a frontage of 54 feet on Spokane avenue by a depth of 120 feet. The structure is 39 by 42 feet, one and one-half stories high with basement. The walls are of brick and terra-cotta with concrete foundations. The first floor will be fitted up for the post office, while the second floor will provide office space and caretaker's quarters. The work is still in progress.

##### ROSSLAND

*Public Building.*—This building was almost totally destroyed by fire in March, 1929. The damaged parts of the exterior were reconstructed under contract awarded in August, 1929, and the interior completely rebuilt. New interior fittings were supplied and installed.

##### TRAIL

*Public Building.*—A contract was awarded in January, 1930, for the erection of a public building on a site purchased in October, 1926, and having a 50-foot frontage on Cedar street by a depth of 100 feet on Eldorado street. The structure, 50 by 89 feet, is two stories high with basement, and is built of brick trimmed with stone on concrete foundations. The first floor will be fitted up as a post office, and the second floor will provide space for the customs offices, spare offices, and caretaker's quarters. The work is still in progress.

## VANCOUVER

*Examining Warehouse.*—Mastic flooring was laid on the first and fourth floors, general repairs were executed, and the interior and exterior painted.

*Grain Inspection Office.*—A one-story addition, 12 feet wide by 40 feet long, was constructed at the rear of the present office, to provide additional accommodation for the staff.

*Generally.*—General repairs and improvements were made to the Winch building, public building and immigration building.

## VICTORIA

*Old Custom House Building and Old Post Office Building.*—Both of these buildings were rewired in conduit and modern lighting fixtures installed. The interiors and exteriors were painted and general repairs made.

*Immigration Building.*—New brick enclosures were constructed, the interior and exterior painted and general repairs made.
